

CompTIA CNX-001指南，CNX-001考試心得

此外，這些PDFExamDumps CNX-001考試題庫的部分內容現在是免費的：https://drive.google.com/open?id=1FIAJ5qB2RluUQi-0_u-hjem3fCU25OPR

PDFExamDumps 就是一個能使 CNX-001 認證考試的通過率提高的一個網站。我們的資深IT專家在不斷研究出各種成功通過 CompTIA CNX-001 認證考試的方案，他們的研究成果可以100%保證一次性通過 CompTIA CNX-001 認證考試。在我們的支援下，您不但能順利通過考試，還能節省了時間和金錢。此外，我們承諾如果不通過 CNX-001 考試，將100%退款。

CompTIA CNX-001 考試大綱：

| 主題 | 簡介 |
|------|--|
| 主題 1 | <ul style="list-style-type: none">• Network Operations, Monitoring, and Performance: This section of the exam measures skills of Network Operations Specialists and covers day-to-day operational management of network environments. It involves configuring monitoring tools, analyzing performance data, and responding to alerts. Candidates are evaluated on their ability to maintain network health, optimize throughput, and ensure consistent uptime by applying best practices for proactive performance tuning and operations management. |

| | |
|------|--|
| 主題 2 | <ul style="list-style-type: none"> • Network Troubleshooting: This section of the exam measures the skills of Network Support Engineers and covers diagnosing and resolving connectivity and performance issues across various network layers. It focuses on identifying root causes, using diagnostic tools, and applying systematic troubleshooting methodologies. The goal is to ensure that professionals can minimize downtime, restore service quickly, and prevent recurring problems by maintaining a resilient and stable network environment. |
| 主題 3 | <ul style="list-style-type: none"> • Network Security: This section of the exam measures the skills of Security Engineers and covers core practices for protecting network infrastructure. It includes applying firewall rules, implementing access control measures, and designing secure segmentation strategies. The content emphasizes threat mitigation techniques, secure configuration of networking devices, and adherence to compliance frameworks, preparing professionals to safeguard both internal and external network assets effectively. |
| 主題 4 | <ul style="list-style-type: none"> • Network Architecture Design: This section of the exam measures the skills of Network Architects and covers the ability to design scalable, secure, and efficient network architectures. It focuses on understanding design principles, selecting appropriate network components, and aligning architecture decisions with organizational needs. Candidates are expected to demonstrate a solid grasp of topology planning, high-availability configurations, and integration of cloud and on-premise systems to ensure reliability and performance. |

最新的CNX-001認證考試的題目與答案

我們PDFExamDumps配置提供給你最優質的CompTIA的CNX-001考試考古題及答案，將你一步一步帶向成功，我們PDFExamDumps CompTIA的CNX-001考試認證資料絕對提供給你一個真實的考前準備，我們針對性很強，就如同為你量身定做一般，你一定會成為一個有實力的IT專家，我們PDFExamDumps CompTIA的CNX-001考試認證資料將是最適合你也是你最需要的培訓資料，趕緊註冊我們PDFExamDumps網站，相信你會有意外的收穫。

最新的 CloudNetX CNX-001 免費考試真題 (Q76-Q81):

問題 #76

A company is transitioning from on premises to a hybrid environment. Due to regulatory standards, the company needs to achieve a high level of reliability and high availability for the connection between its data center and the cloud provider. Which of the following solutions best meets the requirements?

- A. Establish a VPN with two tunnels to a transit gateway at the cloud provider.
- B. Establish a Direct Connect with the cloud provider and peer to two different VPCs in the cloud network.
- **C. Establish two Direct Connect connections to the cloud provider using two different suppliers.**
- D. Establish a Direct Connect with the cloud provider and a redundant connection with a VPN over the internet.

答案：C

解題說明:

By provisioning two dedicated Direct Connect circuits from separate carriers (diverse physical paths and providers), you achieve a true highly available, fault-tolerant link that meets stringent reliability and regulatory requirements without relying on the public internet.

問題 #77

A network engineer is setting up guest access on a Wi-Fi network. After a recent network analysis, the engineer discovered that a user could access the guest network and attack the corporate network, since the networks share the same VLAN. Which of the following should the engineer do to prevent an attack like this one from happening?

- A. Set up a strong password on the guest wireless network.
- B. Set up a captive portal so all guest users have to register before gaining access to the wireless network.
- C. Set up a MAC filtering rule and add the MAC addresses of all corporate devices to the allow list.
- **D. Configure Layer 2 client isolation for the wireless network.**

答案： D

解題說明：

Comprehensive and Detailed Explanation From Exact Extract:

Layer 2 client isolation ensures that devices connected to the same wireless network (such as a guest SSID) cannot communicate with each other or other VLANs. This prevents guest users from scanning or attacking internal devices. It's a fundamental security control for guest Wi-Fi access.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Wireless Network Segmentation and Security":
"Client isolation prevents peer-to-peer attacks over Wi-Fi by ensuring wireless clients cannot communicate with one another, a necessary control on shared guest networks." Other options:

- * B. MAC filtering is easy to spoof and hard to manage at scale.
- * C. Strong passwords improve access control but don't isolate guest traffic.
- * D. Captive portals add a registration layer but don't address VLAN or broadcast isolation.

問題 #78

A network architect is designing a solution to secure the organization's applications based on the security policy. The requirements are:

Users must authenticate using one set of credentials.

External users must be located in authorized sites.

Session timeouts must be enforced.

Network access requirements should be changed as needed.

Which of the following best meet these requirements? (Choose two.)

- A. Multifactor authentication
- B. Single sign-on
- C. Static IP allocation
- D. Risk-based authentication
- E. Conditional access policy
- F. Role-based access

答案： B,E

解題說明：

Single sign-on: Provides users with one set of credentials for authentication across all applications, simplifying access and reducing password fatigue.

Conditional access policy: Enforces location-based restrictions for external users, configurable session timeouts, and dynamic network access controls that can be updated as requirements evolve.

問題 #79

After a company migrated all services to the cloud, the security auditor discovers many users have administrator roles on different services. The company needs a solution that:

Protects the services on the cloud.

Limits access to administrative roles.

Creates a policy to approve requests for administrative roles on critical services within a limited time.

Forces password rotation for administrative roles.

Audits usage of administrative roles.

Which of the following is the best way to meet the company's requirements?

- A. Conditional access
- B. Access control list
- C. Session-based token
- D. Privileged access management

答案： D

解題說明：

A Privileged Access Management (PAM) solution provides just-in-time elevation to administrative roles, enforces approval workflows with time-bound access, requires credential rotation, and offers comprehensive auditing of all privileged sessions, fully meeting the company's requirements.

問題 #80

A network administrator must connect a remote building at a manufacturing plant to the main building via a wireless connection. Which of the following should the administrator choose to get the greatest possible range from the wireless connection? (Choose two.)

- A. Omnidirectional antenna
- B. Built-in antenna
- C. 6GHz
- **D. Patch antenna**
- **E. 2.4GHz**
- F. 5GHz

答案： D,E

解題說明：

Comprehensive and Detailed Explanation From Exact Extract:

2.4GHz has longer range and better wall penetration than higher frequencies like 5GHz or 6GHz. A patch antenna (a type of directional antenna) focuses the signal in one direction, greatly improving range and reliability over long distances between buildings.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Wireless Deployment and Antenna Selection":

"2.4GHz offers extended range over 5GHz. Directional antennas such as patch antennas concentrate signals toward a target, improving distance communication." Other options:

* B & C. Higher frequencies provide faster speeds but shorter range.

* D. Omnidirectional antennas spread signal in all directions, not ideal for point-to-point.

* F. Built-in antennas are generally low gain and insufficient for building-to-building links.

問題 #81
