NEW QUESTION # 23

Which protocol is the industry standard for provisioning identity and access management in hybrid landscapes?

- A. SCIM
- B. SSL
- C. SAML
- D. OIDC

Answer: A

NEW QUESTION # 24

In SAP HANA Cloud, who has access to a database object?

- A. The user DBADMIN and the group owner
- B. The creator and the schema owner
- C. The user SYSTEM and the creator
- D. The owner and the SAP-owned users

Answer: B

Explanation:
In SAP HANA Cloud, access to a database object is granted to the creator and the schema owner. The creator, typically the user who created the object (e.g., a table or view), is automatically granted full privileges on that object, allowing them to manage and manipulate it. The schema owner, who owns the schema in which the object resides, also has access, as they have overarching control over all objects within their schema. This dual ownership model ensures that both the user responsible for creating the object and the schema's administrator can manage it, supporting flexible and secure database administration. The user DBADMIN, group owner, SAP-owned users, or SYSTEM user may have specific administrative privileges, but they are not automatically granted access to all database objects unless explicitly configured. This approach aligns with SAP HANA Cloud's security framework, ensuring that object access is tightly controlled and aligned with the principles of least privilege and ownership-based access management.
