

No Internet? No Problem! Prepare For Amazon AWS-Solutions-Architect-Associate Exam Offline

What's more, part of that itPass4sure AWS-Solutions-Architect-Associate dumps now are free: <https://drive.google.com/open?id=1X2naKLMLzVLpYhWjOwDO81b60SpM7b4d>

You can increase your competitive force in the job market if you have the certificate. AWS-Solutions-Architect-Associate exam torrent of us will offer an opportunity like this. If you choose us, we will help you pass the exam just one time. AWS-Solutions-Architect-Associate exam torrent of us is high quality and accuracy, and you can use them at ease. Besides, we offer you free demo to have a try before buying, and we have free update for 365 days after purchasing. The update version for AWS-Solutions-Architect-Associate Exam Dumps will be sent to your email automatically.

The process of getting a certificate isn't an easy process for many of the candidates. We will provide you with the company in your whole process of preparation in the AWS-Solutions-Architect-Associate learning materials. You will find that you are not the only yourself, you also have us, our service stuff will offer you the most considerate service, and in the process of practicing the AWS-Solutions-Architect-Associate Training Materials, if you have any questions please contact us, we will be very glad to help you.

>> Latest AWS-Solutions-Architect-Associate Test Camp <<

Pass Guaranteed Amazon - AWS-Solutions-Architect-Associate - AWS Certified Solutions Architect - Associate (SAA-C03) Unparalleled Latest Test Camp

Our itPass4sure have a huge IT elite team. They will accurately and quickly provide you with Amazon certification AWS-Solutions-Architect-Associate exam materials and timely update Amazon AWS-Solutions-Architect-Associate exam certification exam practice questions and answers and binding. Besides, itPass4sure also got a high reputation in many certification industry. The the probability of passing Amazon Certification AWS-Solutions-Architect-Associate Exam is very small, but the reliability of itPass4sure can guarantee you to pass the examination of this probability.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q231-Q236):

NEW QUESTION # 231

In the Amazon RDS Oracle DB engine, the Database Diagnostic Pack and the Database Tuning Pack are only available with _____

- A. Oracle Standard Edition
- B. Oracle Express Edition
- C. Oracle Enterprise Edition
- D. None of these

Answer: C

NEW QUESTION # 232

A company runs a legacy system on a single m4.2xlarge Amazon EC2 instance with Amazon EBS storage.

The EC2 instance runs both the web server and a self-managed Oracle database. A snapshot is made of the EBS volume every 12 hours, and an AMI was created from the fully configured EC2 instance.

A recent event that terminated the EC2 instance led to several hours of downtime. The application was successfully launched from the AMI, but the age of the EBS snapshot and the repair of the database resulted in the loss of 8 hours of data. The system was also down for 4 hours while the Systems Operators manually performed these processes.

What architectural changes will minimize downtime and reduce the chance of lost data?

- A. Increase the web server instance count to two m4.xlarge instances and use Amazon Route 53 round-robin load balancing to spread the load. Enable Route 53 health checks on the web servers. Migrate the database to an Amazon RDS Oracle Multi-AZ DB instance.
- **B. Run the application on m4.xlarge EC2 instances behind an Elastic Load Balancer/Application Load Balancer. Run the EC2 instances in an Auto Scaling group across multiple Availability Zones with a minimum instance count of two. Migrate the database to an Amazon RDS Oracle Multi-AZ DB instance.**
- C. Run the application on m4.2xlarge EC2 instances behind an Elastic Load Balancer/Application Load Balancer. Run the EC2 instances in an Auto Scaling group across multiple Availability Zones with a minimum instance count of one. Migrate the database to an Amazon RDS Oracle Multi-AZ DB instance.
- D. Create an Amazon CloudWatch alarm to automatically recover the instance. Create a script that will check and repair the database upon reboot. Subscribe the Operations team to the Amazon SNS message generated by the CloudWatch alarm.

Answer: B

Explanation:

Explanation/Reference:

NEW QUESTION # 233

Your Application is not highly available, and your on-premises server cannot access the mount target because the Availability Zone (AZ) in which the mount target exists is unavailable.

Which of the following actions is recommended?

- A. The application must implement the shutdown logic and delete the mount target in the AZ.
- B. The application must implement the delete logic and connect to a different mount target in the same AZ.
- **C. The application must implement the restart logic and connect to a mount target in a different AZ.**
- D. The application must implement the checkpoint logic and recreate the mount target.

Answer: C

Explanation:

To make sure that there is continuous availability between your on-premises data center and your Amazon Virtual Private Cloud (VPC), it is suggested that you configure two AWS Direct Connect connections. Your application should implement restart logic and connect to a mount target in a different AZ if your application is not highly available and your on-premises server cannot access the mount target because the AZ in which the mount target exists becomes unavailable.

NEW QUESTION # 234

An online retail company has more than 50 million active customers and receives more than 25,000 orders each day. The company collects purchase data for customers and stores this data in Amazon S3. Additional customer data is stored in Amazon RDS.

The company wants to make all the data available to various teams so that the teams can perform analytics.

The solution must provide the ability to manage fine-grained permissions for the data and must minimize operational overhead.

Which solution will meet these requirements?

- A. Schedule an AWS Lambda function to periodically copy data from Amazon RDS to Amazon S3. Create an AWS Glue crawler. Use Amazon Athena to query the data. Use S3 policies to limit access.
- **B. Create a data lake by using AWS Lake Formation. Create an AWS Glue JDBC connection to Amazon RDS. Register the S3 bucket in Lake Formation. Use Lake Formation access controls to limit access.**

- C. Create an Amazon Redshift cluster. Schedule an AWS Lambda function to periodically copy data from Amazon S3 and Amazon RDS to Amazon Redshift. Use Amazon Redshift access controls to limit access.
- D. Migrate the purchase data to write directly to Amazon RDS. Use RDS access controls to limit access.

Answer: B

Explanation:

To make all the data available to various teams and minimize operational overhead, the company can create a data lake by using AWS Lake Formation. This will allow the company to centralize all the data in one place and use fine-grained access controls to manage access to the data. To meet the requirements of the company, the solutions architect can create a data lake by using AWS Lake Formation, create an AWS Glue JDBC connection to Amazon RDS, and register the S3 bucket in Lake Formation. The solutions architect can then use Lake Formation access controls to limit access to the data. This solution will provide the ability to manage fine-grained permissions for the data and minimize operational overhead.

NEW QUESTION # 235

A company uses Amazon Route 53 as its DNS provider. The company hosts a website both on premises and in the AWS Cloud. The company's on-premises data center is near the us-west-1 Region. The company hosts the website on AWS in the eu-central-1 Region.

The company wants to optimize load times for the website as much as possible.

Which solution will meet these requirements?

- A. Create a DNS record with an IP-based routing policy. Configure specific IP ranges to return the value for the eu-central-1 website. Configure all other IP ranges to return the value for the on-premises website.
- B. Create a DNS record with a latency-based routing policy. Configure one latency record for the eu-central-1 website and one latency record for the on-premises data center. Associate the record for the on-premises data center with the us-west-1 Region.
- C. Create a DNS record with a weighted routing policy. Split the traffic evenly between eu-central-1 and the on-premises data center.
- D. Create a DNS record with a failover routing policy that routes all primary traffic to eu-central-1. Configure the routing policy to use the on-premises data center as the secondary location.

Answer: B

Explanation:

Comprehensive and Detailed Explanation (paraphrased from AWS Solutions Architect guidance):

* Amazon Route 53 latency-based routing is specifically designed to route users to the endpoint that provides the lowest latency, based on actual latency measurements between AWS Regions and users' networks. This directly supports the goal of optimizing load times (performance).

* For non-AWS endpoints (like an on-premises data center), Route 53 lets you create a latency routing record and associate it with the AWS Region that is closest to that endpoint. In this case, the on-premises data center is near us-west-1, so you associate that latency record with the us-west-1 Region.

* Users for whom the eu-central-1 Region has lower latency will be routed to the AWS website in eu-central-1.

* Users for whom the us-west-1-associated endpoint has lower latency will be routed to the on-premises website.

* This matches AWS best practices for high-performance, low-latency architectures when you have multiple endpoints in different geographic locations, including a mix of AWS and on-premises resources.

Why the other options are not correct:

* Option A (Failover routing):

* Failover routing is designed for high availability and disaster recovery (active-passive), not for optimizing latency.

* All traffic goes to the primary endpoint (eu-central-1) unless it is unhealthy. That does not choose the lowest-latency endpoint for each user, so it does not meet the "optimize load times as much as possible" requirement.

* Option B (IP-based routing):

* IP-based / geo-based policies are about directing users based on location information (IP/geo), not measured latency.

* You would have to manually decide which IP ranges get which endpoint, which does not guarantee that each user goes to the lowest-latency endpoint. It's less precise and less dynamic than latency-based routing.

* Option D (Weighted routing):

* Weighted routing splits traffic according to fixed weights (e.g., 50/50), regardless of user location or latency.

* This is useful for testing, blue/green deployment, or gradual traffic shifting, but not for performance optimization per user.

Therefore, the only option that directly aligns with AWS guidance for performance optimization and latency-based traffic steering across Regions and on-premises endpoints is:

C. Create a DNS record with a latency-based routing policy... associate the on-premises endpoint with us-west-1.

NEW QUESTION # 236

.....

If you are worried that it is not easy to obtain the certification of AWS-Solutions-Architect-Associate. Our AWS-Solutions-Architect-Associate study questions can meet your needs. Once you use our AWS-Solutions-Architect-Associate exam materials, you don't have to worry about consuming too much time, because high efficiency is our great advantage. You only need to spend 20 to 30 hours on practicing and consolidating of our AWS-Solutions-Architect-Associate learning material, you will have a good result. After years of development practice, our AWS-Solutions-Architect-Associate test torrent is absolutely the best. You will embrace a better future if you choose our AWS-Solutions-Architect-Associate exam materials.

Real AWS-Solutions-Architect-Associate Testing Environment: <https://www.itpass4sure.com/AWS-Solutions-Architect-Associate-practice-exam.html>

That's why so many people choose to buy Real AWS-Solutions-Architect-Associate Testing Environment valid dumps on our website, Amazon Latest AWS-Solutions-Architect-Associate Test Camp Please feel free to contact us, Amazon Latest AWS-Solutions-Architect-Associate Test Camp Paying security is the problem which makes consumer afraid; there have many cases that customers' money has been stolen by criminals through online bank, itPass4sure Real AWS-Solutions-Architect-Associate Testing Environment also has a product support team available every time to help you out in any terms.

With the complete and comprehensive AWS-Solutions-Architect-Associate exam dumps preparation you can pass the AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Architect-Associate) exam with good scores, We will offer you the most excellent pre-sales and after-sales service.

HOT Latest AWS-Solutions-Architect-Associate Test Camp: AWS Certified Solutions Architect - Associate (SAA-C03) - High-quality Amazon Real AWS-Solutions-Architect-Associate Testing Environment

That's why so many people choose to buy AWS Certified Solutions Architect AWS-Solutions-Architect-Associate Valid Dumps on our website, Please feel free to contact us, Paying security is the problem which makes consumer afraid; there AWS-Solutions-Architect-Associate Interactive Questions have many cases that customers' money has been stolen by criminals through online bank.

itPass4sure also has a product support team available Latest AWS-Solutions-Architect-Associate Test Camp every time to help you out in any terms, Get the Most Recent Amazon AWS-Solutions-Architect-Associate Exam Questions for Guaranteed Success: It would be really helpful to purchase AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Architect-Associate) exam dumps right away.
