## **ECCouncil Certified Threat Intelligence Analyst Sample Questions (Q42-Q47):**

### **NEW QUESTION # 42**

Lizzy, an analyst, wants to recognize the level of risks to the organization so as to plan countermeasures against cyber attacks. She used a threat modelling methodology where she performed the following stages:

Stage 1: Build asset-based threat profiles

Stage 2: Identify infrastructure vulnerabilities

Stage 3: Develop security strategy and plans

Which of the following threat modelling methodologies was used by Lizzy in the aforementioned scenario?

- A. DREAD
- **B. OCTAVE**
- C. TRIKE
- D. VAST

**Answer: B**

Explanation:

The threat modeling methodology employed by Lizzy, which involves building asset-based threat profiles, identifying infrastructure vulnerabilities, and developing security strategies and plans, aligns with the OCTAVE (Operationally Critical Threat, Asset, and Vulnerability Evaluation) methodology. OCTAVE focuses on organizational risk and security practices, emphasizing self-directed risk assessments to identify and prioritize threats to organizational assets and develop appropriate security strategies and plans. This methodology is asset-driven and revolves around understanding critical assets, identifying threats to those assets, and assessing vulnerabilities, leading to the development of a comprehensive security strategy.

### **NEW QUESTION # 43**

In which of the following storage architecture is the data stored in a localized system, server, or storage hardware and capable of storing a limited amount of data in its database and locally available for data usage?

- A. Cloud storage
- **B. Object-based storage**
- C. Centralized storage
- D. Distributed storage

**Answer: B**

### **NEW QUESTION # 44**

Marry wants to follow an iterative and incremental approach to prioritize requirements in order to protect the important assets of an organization against attacks. She wants to set the requirements based on the order of priority, where the most important requirement must be met first for a greater chance of success. She wants to apply prioritization tasks, scenarios, use cases, tests, and so on.

Which of the following methodologies should Marry use to prioritize the requirements?

- A. Data sampling
- B. Fusion analysis
- C. Data visualization
- **D. MoSCoW**

**Answer: D**

Explanation:

The methodology described-iterative and incremental prioritization of requirements based on importance-perfectly aligns with the MoSCoW method.

MoSCoW stands for:

- \* M - Must have (critical requirements that are mandatory),
- \* S - Should have (important but not essential),
- \* C - Could have (desirable but optional),
- \* W - Won't have (this time) (deferred or out of scope).

It is widely used in security, risk management, and software development to determine the priority of tasks or requirements that should be implemented first.

By applying MoSCoW, Marry ensures that critical security requirements (such as protecting core assets) are addressed first before moving on to less critical ones.

Why the Other Options Are Incorrect:

- \* A. Data sampling: Refers to statistical analysis methods, not prioritization.
- \* C. Data visualization: Used to represent data graphically, not for setting priorities.
- \* D. Fusion analysis: Used to integrate multiple data sources for intelligence analysis, not requirement prioritization.

Conclusion:

Marry should use the MoSCoW prioritization methodology to structure and prioritize her organization's security requirements.

Final Answer: B. MoSCoW

Explanation Reference (Based on CTIA Study Concepts):

In CTIA's requirement prioritization and planning stages, MoSCoW is used to assign importance levels to intelligence and security requirements for efficient implementation.

### NEW QUESTION # 45

Karry, a threat analyst at an XYZ organization, is performing threat intelligence analysis. During the data collection phase, he used a data collection method that involves no participants and is purely based on analysis and observation of activities and processes going on within the local boundaries of the organization.

Identify the type data collection method used by the Karry.

- A. Passive data collection
- B. Active data collection
- C. Raw data collection
- D. Exploited data collection

**Answer: A**

Explanation:

Karry's method of collecting data, which involves no active engagement with participants and is purely based on analysis and observation of activities within the organization, is known as passive data collection. This method is characterized by the non-intrusive monitoring of data and events, allowing analysts to gather intelligence without alerting potential adversaries or disrupting ongoing processes. Passive data collection is essential for maintaining operational security and obtaining an unaltered view of system and network activities.

### NEW QUESTION # 46

Tracy works as a CISO in a large multinational company. She consumes threat intelligence to understand the changing trends of cyber security. She requires intelligence to understand the current business trends and make appropriate decisions regarding new technologies, security budget, improvement of processes, and staff. The intelligence helps her in minimizing business risks and protecting the new technology and business initiatives.

Identify the type of threat intelligence consumer is Tracy.

- A. Strategic users
- B. Technical users
- C. Tactical users
- D. Operational users

**Answer: A**

Explanation:

Tracy, as a Chief Information Security Officer (CISO), requires intelligence that aids in understanding broader business and

Strategic users leverage intelligence to guide long-term planning and decision-making, focusing on minimizing business risks and safeguarding against emerging threats to new technology and business initiatives. This type of intelligence is less about the technical specifics of individual threats and more about understanding the overall threat landscape, regulatory environment, and industry trends to inform high-level strategy and policy.
