Improve your professional ability with our 300-710 certification. Getting qualified by the certification will position you for better job opportunities and higher salary. Now, let's start your preparation with 300-710 exam training guide. Our 300-710 practice pdf offered by Real4dumps is the latest and valid which suitable for all of you. The free demo is especially for you to free download for try before you buy. You can get a lot from the 300-710 simulate exam dumps and get your 300-710 certification easily.

Cisco 300-710 exam, Securing Networks with Cisco Firepower, is designed for IT professionals who want to enhance their knowledge and skills in network security. 300-710 exam validates the candidates' comprehension of the Cisco Firepower Threat Defense, including its architecture, installation, configuration, and integration with other Cisco security products. 300-710 Exam also covers the latest industry practices and techniques to secure networks against modern cyber threats.

## Explore the Benefits and Cisco 300-710 Exam Preparation Strategies

Although the 300-710 certificate is good, people who can successfully obtain each year are rare, and the difficulty of the 300-710 exam and the pressure of study usually make the students feel discouraged. However, for us, these will no longer be a problem. In the past few years, our team has ushered in hundreds of industry experts, experienced numerous challenges day and night, and finally formed complete learning products--300-710 Exam Torrent, which is tailor-made for students who want to obtain the 300-710 certificate.

## Introduction to Securing Networks with Cisco Firepower (300-710 SNCF) Exam

The Securing Networks with Cisco Firepower (300-710 SNCF) test is a 90-minute CCNP Security and Cisco Accredited Specialist-Network Security Firepower certification-related exam. This exam evaluates the Cisco Firepower Threat Protection and Firepower knowledge of a applicant, including policy settings, integrations, implementations, management and troubleshooting. These

courses, Cisco Firepower Securing Networks, and Cisco Firepower Next-Generation Intrusion Prevention System Securing Network, help candidates prepare for this test.

The primary objective of the exam is to acquire information about the implementation of advanced features of the Next-Generation Firewall (NGFW) and Next-Generation Intrusion Prevention System (NGIPS), including network intelligence, identification of file types, detection of network-based malware, and deep inspection of packets.

This exam tests your knowledge of virtual appliances in the Cisco Firepower Threat Protection and Firepower 7000 and 8000 Series, including:

- Integrations
- Policy configurations
- Deployments
- Management and troubleshooting

## Cisco Securing Networks with Cisco Firepower Sample Questions (Q177-Q182):

### NEW QUESTION # 177

Which command is run on an FTD unit to associate the unit to an FMC manager that is at IP address 10.0.0.10, and that has the registration key Cisco123?

- A. `configure manager add Cisco123 10.0.0.10`
- B. `configure manager local 10.0.0.10 Cisco123`
- C. `configure manager add 10.0.0.10 Cisco123`
- D. `configure manager local Cisco123 10.0.0.10`

**Answer: C**

Explanation:

Reference:

[https://www.cisco.com/c/en/us/td/docs/security/firepower/misc/fmc-ftd-mgmt-nw/fmc-ftd-mgmt-nw.html#id\\_106101](https://www.cisco.com/c/en/us/td/docs/security/firepower/misc/fmc-ftd-mgmt-nw/fmc-ftd-mgmt-nw.html#id_106101)

### NEW QUESTION # 178

An engineer attempts to pull the configuration for a Cisco FTD sensor to review with Cisco TAC but does not have direct access to the CU for the device. The CLI for the device is managed by Cisco FMC to which the engineer has access. Which action in Cisco FMC grants access to the CLI for the device?

- A. Download the configuration file within the File Download section of Cisco FMC.
- B. Create a backup of the configuration within the Cisco FMC.
- C. **Export the configuration using the Import/Export tool within Cisco FMC.**
- D. Use the `show run all` command in the Cisco FTD CLI feature within Cisco FMC.

**Answer: C**

### NEW QUESTION # 179

An engineer must deploy a Cisco FTD device. Management wants to examine traffic without requiring network changes that will disrupt end users. Corporate security policy requires the separation of management traffic from data traffic and the use of SSH over Telnet for remote administration. How must the device be deployed to meet these requirements?

- A. in routed mode with a bridge virtual interface
- B. in routed mode with a diagnostic interface
- C. in transparent mode with a data interface
- D. **in transparent mode with a management interface**

**Answer: D**

Explanation:

Explanation

To deploy a Cisco FTD device that meets the requirements of the question, the engineer must use transparent mode with a management interface. Transparent mode is a firewall configuration in which the FTD device acts as a "bump in the wire" or a "stealth firewall" and is not seen as a router hop to connected devices. In transparent mode, the FTD device can examine traffic without requiring network changes that will disrupt end users, such as changing IP addresses or routing configurations<sup>1</sup>. A management interface is a dedicated interface that is used for managing the FTD device and separating management traffic from data traffic. A management interface can be configured to allow SSH access for remote administration, which is more secure than Telnet<sup>2</sup>.

The other options are incorrect because:

Routed mode is a firewall configuration in which the FTD device acts as a router and performs address translation and routing for connected networks. Routed mode requires network changes that may disrupt end users, such as changing IP addresses or routing configurations<sup>1</sup>. A diagnostic interface is a special interface that is used for troubleshooting and capturing traffic on the FTD device. A diagnostic interface does not separate management traffic from data traffic or allow SSH access for remote administration. Transparent mode with a data interface does not meet the requirement of separating management traffic from data traffic. A data interface is a regular interface that is used for passing and inspecting traffic on the FTD device. A data interface does not allow SSH access for remote administration<sup>2</sup>.

Routed mode with a bridge virtual interface (BVI) does not meet the requirement of examining traffic without requiring network changes that will disrupt end users. A BVI is a logical interface that acts as a container for one or more physical or logical interfaces that belong to the same layer 2 broadcast domain. A BVI allows the FTD device to route between different bridge groups on the same security module/engine. However, routed mode still requires network changes that may disrupt end users, such as changing IP addresses or routing configurations.

#### NEW QUESTION # 180

Which two types of objects are reusable and supported by Cisco FMC? (Choose two.)

- A. dynamic key mapping objects that help link HTTP and HTTPS GET requests to Layer 7 application protocols.
- **B. network-based objects that represent IP address and networks, port/protocols pairs, VLAN tags, security zones, and origin/destination country**
- **C. reputation-based objects that represent Security Intelligence feeds and lists, application filters based on category and reputation, and file lists**
- D. network-based objects that represent FQDN mappings and networks, port/protocol pairs, VXLAN tags, security zones and origin/destination country
- E. reputation-based objects, such as URL categories

**Answer: B,C**

Explanation:

Reference:

[https://www.cisco.com/c/en/us/td/docs/security/firepower/620/configuration/guide/fpmc-config\\_guide-v62/reusable\\_objects.html#ID-2243-00000414](https://www.cisco.com/c/en/us/td/docs/security/firepower/620/configuration/guide/fpmc-config_guide-v62/reusable_objects.html#ID-2243-00000414)

#### NEW QUESTION # 181

What is the disadvantage of setting up a site-to-site VPN in a clustered-units environment?

- A. VPN connections can be re-established only if the failed master unit recovers.
- **B. VPN connections must be re-established when a new master unit is elected.**
- C. Only established VPN connections are maintained when a new master unit is elected.
- D. Smart License is required to maintain VPN connections simultaneously across all cluster units.

**Answer: B**

Explanation:

Section: Configuration

Explanation/Reference: [https://www.cisco.com/c/en/us/td/docs/security/firepower/fxos/clustering/ftd-cluster-solution.html#concept\\_g32\\_yml\\_y2b](https://www.cisco.com/c/en/us/td/docs/security/firepower/fxos/clustering/ftd-cluster-solution.html#concept_g32_yml_y2b)
