

To prepare for the CIS-Discovery exam, it is recommended that you have experience working with ServiceNow Discovery and have completed the Discovery Fundamentals course. You can also access additional resources, such as study guides and practice exams, to help you prepare. Once you pass the exam, you will receive the CIS-Discovery Certification, which is valid for two years. Overall, the CIS-Discovery exam is a valuable credential for IT professionals who work with ServiceNow Discovery and want to demonstrate their expertise in this area.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q122-Q127):

NEW QUESTION # 122

Can ServiceNow retrieve credential from external credential repository?

Response:

- A. No, only local credentials are allowed
- **B. Yes (Discovery External credential storage plugin has to be enabled in order to use this functionality)**

Answer: B

NEW QUESTION # 123

Which of the following choices are only used for the Application Pattern Type? (Choose two.)

- **A. Operating System**
- B. Identification Section
- C. CI Type
- **D. Run Order**

Answer: A,D

NEW QUESTION # 124

How do you ensure the data integrity, completeness and correctness of your CMDB Response:

- A. Manually deleting duplicate CIs
- **B. Using correct identification and reconciliation rules**
- C. Always using Scripts to manage CMDB
- D. Using ServiceNow discovery as the only option

Answer: B

NEW QUESTION # 125

Which of the following can be used in the Debug Identification Section in Debug Mode for an infrastructure pattern? (Choose two.)

- A. PID
- **B. IP**
- C. AWS Endpoint
- **D. Host Name**

Answer: B,D

Explanation:

The Debug Identification Section in Debug Mode allows you to specify the identification attributes of a CI that you want to debug. These attributes are used to find the CI in the CMDB and run the pattern on it. The identification attributes vary depending on the CI class, but for infrastructure patterns, the common ones are IP and Host Name. These attributes are also used by the horizontal discovery to identify CIs. AWS Endpoint and PID are not valid identification attributes for infrastructure patterns.

References: The explanation is based on the following sources:

* Activate pattern Debug mode: This document explains how to activate the Debug mode and use the Debug Identification Section to debug a pattern.

* ServiceNow Exam CIS-Discovery Topic 6 Question 9 Discussion: This discussion provides a similar question and answer about

the Debug Identification Section in Debug Mode.

NEW QUESTION # 126

Which of the below choices are benefits of Tracked Configuration Files? (Choose two.)

- A. Unwanted files removed from target
- B. No credentials needed
- C. Files tracked as CIs
- D. Content version comparison

Answer: C,D

Explanation:

Tracked configuration files are files that contain settings and parameters of certain applications or devices that Discovery can find and add to the CMDB. Some of the benefits of tracked configuration files are:

* Content version comparison: You can compare the content of different versions of the same configuration file and see the changes that occurred over time. This can help you troubleshoot issues, audit changes, and restore previous configurations if needed.

* Files tracked as CIs: You can view the configuration files as configuration items (CIs) in the CMDB and see their relationships with other CIs, such as the applications or devices they belong to. This can help you understand the dependencies and impact of the configuration files on your IT environment.
