Free PDF 2026 Accurate CLO-002: New CompTIA Cloud Essentials+ Certification Exam Test Cost

Quality should be tested by time and quantity, which is also the guarantee that we give you to provide CLO-002 exam software for you. Continuous update of the exam questions, and professional analysis from our professional team have become the key for most candidates to Pass CLO-002 Exam. The promise of "no help, full refund" is the motivation of our team. We will continue improving CLO-002 exam study materials. We will guarantee that you you can share the latest CLO-002 exam study materials free during one year after your payment.

CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q517-Q522):

NEW QUESTION # 517

Which of the following is commonly used to forecast market trends?

- A. Serverless computing
- B. Accelerated computing
- C. Machine learning

- D. Data warehouse

Answer: C

Explanation:

Explanation/Reference:

NEW QUESTION # 518

Which of the following application types is suitable for a cloud computing pilot?

- A. Marginal applications
- **B. Desktop productivity applications**
- C. Legacy applications
- D. Mission-critical applications

Answer: B

NEW QUESTION # 519

A small business wants to move its accounting operations to the cloud. Which of the following cloud service models would put the MOST liability on the provider with regard to shared responsibility?

- A. IaaS
- B. PaaS
- **C. SaaS**
- D. BPaaS

Answer: C

Explanation:

SaaS stands for Software as a Service, which is a cloud service model that provides ready-to-use software applications over the internet. The cloud service provider (CSP) is responsible for managing and maintaining the software, including its development, deployment, updates, security, availability, and performance. The customer only needs to access the software through a web browser or a client application, and pay for the usage or subscription. SaaS puts the most liability on the provider with regard to shared responsibility, as the provider handles most of the security and operational tasks for the software, and the customer has minimal control and customization options. Examples of SaaS applications include email, CRM, ERP, accounting, and collaboration tools. The other cloud service models put less liability on the provider and more on the customer, as the customer has more control and responsibility over the cloud resources. IaaS stands for Infrastructure as a Service, which provides virtualized computing resources such as servers, storage, and networking over the internet. The CSP is responsible for securing and maintaining the physical infrastructure, while the customer is responsible for managing the operating system, applications, data, and configurations. PaaS stands for Platform as a Service, which provides a cloud-based environment for developing, testing, and deploying software applications. The CSP is responsible for managing the underlying infrastructure, middleware, and runtime environment, while the customer is responsible for developing, deploying, and managing the applications and data. BPaaS stands for Business Process as a Service, which provides a cloud-based platform for automating and orchestrating business processes. The CSP is responsible for managing the platform, including its integration, security, and scalability, while the customer is responsible for defining, executing, and monitoring the business processes and rules.

NEW QUESTION # 520

Data sovereignty is meant to ensure:

- A. local compliance guidelines can be quickly met in the event a firm is subject to new regulations.
- B. corporate platforms are not restricted or landlocked within a certain cloud provider.
- C. corporate data can be easily moved between data centers as necessary.
- **D. sensitive corporate information is housed in countries preferable to a firm**

Answer: D

NEW QUESTION # 521

Which of the following service models BEST describes a cloud-hosted application in which the end user only creates user access and configures options?

- A. IaaS
- B. PaaS
- C. SaaS
- D. MaaS

Answer: C

Explanation:

SaaS, or Software as a Service, is the best option for describing a cloud-hosted application in which the end user only creates user access and configures options. SaaS is a cloud service model that delivers and manages software applications over the internet, without requiring the end user to install, update, or maintain any software or hardware on their own devices. SaaS applications are typically accessed through a web browser or a mobile app, and the end user only pays for the usage or subscription of the service. SaaS providers are responsible for the infrastructure, platform, security, and maintenance of the software applications, and the end user only needs to create user access and configure options according to their preferences and needs.

SaaS applications are usually designed for specific purposes or functions, such as email, collaboration, CRM, ERP, or accounting.

NEW QUESTION # 522

• • • • •

As we entered into such a web world, cable network or wireless network has been widely spread. And it is easier to find an online environment to do your practices. This version of CLO-002 test prep can be used on any device installed with web browsers. We specially provide a timed programming test in this online CLO-002 Test Engine, and help you build up confidence in a timed exam. With limited time, you need to finish your task in CLO-002 quiz guide, considering your precious time, we also suggest this version of CLO-002 study guide that can help you find out your problems to pass the exam.
