N10-009 Download Pdf, N10-009 Exam Preview

In order to provide the best N10-009 test training guide for all people, our company already established the integrate quality manage system, before sell serve and promise after sale. If you buy the N10-009 preparation materials from our company, we can make sure that you will have the right to enjoy the 24 hours full-time online service on our N10-009 Exam Questions. In order to help the customers solve the problem at any moment, our server staff will be online all the time give you the suggestions on N10-009 study guide.

CompTIA N10-009 Exam Syllabus Topics:

Topic	Details
Topic 1	• Network Security: This section of the exam for cybersecurity specialists and network security administrators covers the importance of basic network security concepts, Various types of attacks and their impact on the network, application of network security features, defense techniques, and solutions.| Network Troubleshooting: For help desk technicians and network support specialists, this section covers troubleshooting methodology, troubleshooting common cabling and physical interface issues, troubleshooting common issues with network services, and use of appropriate tools or protocols to solve networking issues.
Topic 2	• Cloud concepts and connectivity options, and Common networking ports.
Topic 3	• Networking Concepts: For network administrators and IT support professionals, this domain covers

N10-009 Exam Preview & Test N10-009 Centres

Therefore, you have the option to use CompTIA N10-009 PDF questions anywhere and anytime. PrepPDF CompTIA Network+ Certification Exam (N10-009) dumps are designed according to the CompTIA Network+ Certification Exam (N10-009) certification exam standard and have hundreds of questions similar to the actual N10-009 Exam. PrepPDF CompTIA web-based practice exam software also works without installation.

CompTIA Network+ Certification Exam Sample Questions (Q194-Q199):

NEW QUESTION # 194
A network administrator is deploying a new switch and wants to make sure that the default priority value was set for a spanning tree. Which of the following values would the network administrator expect to see?

- A. 0

- B. 1
- C. 2
- D. 3

Answer: B

Explanation:
Understanding Spanning Tree Protocol (STP):
STP is used to prevent network loops in Ethernet networks by creating a spanning tree that selectively blocks some redundant paths.
Default Priority Value:
Bridge Priority: STP uses bridge priority to determine which switch becomes the root bridge. The default bridge priority value for most switches is 32768.
Priority Range: The bridge priority can be set in increments of 4096, ranging from 0 to 61440.

NEW QUESTION # 195
SIMULATION
A network technician was recently onboarded to a company. A manager has tasked the technician with documenting the network and has provided the technician With partial information from previous documentation.
Instructions:
Click on each switch to perform a network discovery by entering commands into the terminal. Fill in the missing information using drop-down menus provided.

Access Switch 1 Prompt

```
C:\> nmap
  % Invalid input detected.
C:\>
```

Answer:

Explanation:
See the Explanation for detailed information on this simulation
Explanation:
(Note: Ips will be change on each simulation task, so we have given example answer for the understanding) To perform a network discovery by entering commands into the terminal, you can use the following steps:
Click on each switch to open its terminal window.
Enter the command show ip interface brief to display the IP addresses and statuses of the switch interfaces.
Enter the command show vlan brief to display the VLAN configurations and assignments of the switch interfaces.
Enter the command show cdp neighbors to display the information about the neighboring devices that are connected to the switch.
Fill in the missing information in the diagram using the drop-down menus provided.
Here is an example of how to fill in the missing information for Core Switch 1:
The IP address of Core Switch 1 is 192.168.1.1.
The VLAN configuration of Core Switch 1 is VLAN 1: 192.168.1.0/24, VLAN 2: 192.168.2.0/24, VLAN 3: 192.168.3.0/24.
The neighboring devices of Core Switch 1 are Access Switch 1 and Access Switch 2.
The interfaces that connect Core Switch 1 to Access Switch 1 are GigabitEthernet0/1 and GigabitEthernet0/2.
The interfaces that connect Core Switch 1 to Access Switch 2 are GigabitEthernet0/3 and GigabitEthernet0/4.
You can use the same steps to fill in the missing information for Access Switch 1 and Access Switch 2.

NEW QUESTION # 196
Which of the following cloud service models most likely requires the greatest up-front expense by the customer when migrating a data center to the cloud?

- A. Platform as a service
- B. Software as a service
- C. Network as a service
- D. Infrastructure as a service

Answer: D

Explanation:
Infrastructure as a Service (IaaS) typically requires the greatest up-front expense by the customer when migrating a data center to the cloud. IaaS provides virtualized computing resources over the internet, where customers rent virtual machines, storage, and

networks. The customer is responsible for managing the operating systems, applications, and data. This model often necessitates significant initial investment in planning, migration, and configuring the infrastructure. In contrast, Software as a Service (SaaS) and Platform as a Service (PaaS) models usually involve lower up-front costs because they offer more managed services.
Reference: CompTIA Network+ Certification Exam Objectives - Cloud Models section.

NEW QUESTION # 197

A customer recently moved into a new office and notices that some wall plates are not working and are not properly labeled Which of the following tools would be best to identify the proper wiring in the IDF?

- A. Visual fault locator
- B. Cable tester
- C. Toner and probe
- D. Network tap

Answer: C

Explanation:
A toner and probe tool, also known as a tone generator and probe, is used to trace and identify individual cables within a bundle or to locate the termination points of cables in wiring closets and patch panels. It generates a tone that can be picked up by the probe, helping technicians quickly and accurately identify and label wall plates and wiring. This is the best tool for identifying proper wiring in the Intermediate Distribution Frame (IDF). References: CompTIA Network+ Exam Objectives and official study guides.

NEW QUESTION # 198

An administrator is setting up an SNMP server for use in the enterprise network and needs to create device IDs within a MIB. Which of the following describes the function of a MIB?

- A. Policy enforcement point
- B. Network access controller
- C. DHCP relay device
- D. Definition file for event translation

Answer: D

Explanation:
* MIB (Management Information Base): A MIB is a database used for managing the entities in a communication network. The MIB is used by Simple Network Management Protocol (SNMP) to translate events into a readable format, enabling network administrators to manage and monitor network devices effectively.
* Function of MIB: MIBs contain definitions and information about all objects that can be managed on a network using SNMP. These objects are defined using a hierarchical namespace containing object identifiers (OIDs).
CompTIA Network+ materials discussing SNMP and MIB functionality.

NEW QUESTION # 199

......

The web-based N10-009 practice test is accessible via any browser. This N10-009 mock exam simulates the actual CompTIA Network+ Certification Exam (N10-009) exam and does not require any software or plugins. Compatible with iOS, Mac, Android, and Windows operating systems, it provides all the features of the desktop-based N10-009 Practice Exam software.
