Interactive ISTQB-CTFL EBook | Valid ISTQB-CTFL Dumps Demo

You can trust top-notch ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) exam questions and start preparation with complete peace of mind and satisfaction. The ISTQB-CTFL exam questions are real, valid, and verified by ISTQB ISTQB-CTFL certification exam trainers. They work together and put all their efforts to ensure the top standard and relevancy of ISTQB-CTFL Exam Dumps all the time. So we can say that with ISTQB ISTQB-CTFL exam questions you will get everything that you need to make the ISTQB-CTFL exam preparation simple, smart, and successful.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q135-Q140):

NEW QUESTION # 135

Which of the following software development models BEST exemplifies a model that does NOT support the principle of early testing?

- A. The incremental development model
- B. The iterative development model
- C. The V-model
- **D. The Waterfall model**

Answer: D

Explanation:

The Waterfall model exemplifies a software development model that does not support the principle of early testing. In the Waterfall model, each phase must be completed before the next begins, which delays testing until after the completion of the earlier phases like requirements gathering and design. This can often result in finding defects later in the development cycle, making them more expensive and time-consuming to fix (ISTQB not-for-profit association) (ISTQB not-for-profit association).References:

NEW QUESTION # 136

Which of the following statements is assigned correctly as a project or product risk?

- A. The software does not perform its intended functions according to the specification: this is a project risk.
- **B. The system architecture does not adequately support some of the non-functional requirements: this is a product risk.**
- C. User experience feedback does not meet product expectations: this is a project risk.
- D. The gradual expansion of the project scope result in significant rework: this is a product risk.

Answer: B

NEW QUESTION # 137

Which two of the following statements describe the advantages provided by good traceability between the test basis and test work products?

- Analyzing the impact of changes.
- A measure of code quality.
- Accurate test estimation.
- Making testing auditable.

Select the correct answer:

- A. ii and iii
- B. i and iii
- C. i and ii
- **D. i and iv**

Answer: D

Explanation:

Good traceability between the test basis and test work products provides several advantages: i. Analyzing the impact of changes: Traceability allows for easy identification of which parts of the test work products will be affected by changes in the requirements or design, facilitating impact analysis. iv. Making testing auditable: Traceability ensures that there is a clear connection between the requirements and the test cases, which makes the testing process auditable and provides evidence that all requirements have been tested.

NEW QUESTION # 138

Which ONE of the following statements does NOT describe how testing contributes to higher quality?

- A. Properly designed tests that pass reduce the level of risk in a system.
- B. Performing a review of the requirement specifications before implementing the system can enhance quality.
- **C. The testing of software demonstrates the absence of defects.**
- D. Software testing identifies defects, which can be used to improve development activities.

Answer: C

Explanation:

* The testing of software does not demonstrate the absence of defects, but rather the presence of defects or the conformance of the software to the specified requirements¹. Testing can never prove that the software is defect-free, as it is impossible to test all possible scenarios, inputs, outputs, and behaviors of the software². Testing can only provide a level of confidence in the quality of the software, based on the coverage, effectiveness, and efficiency of the testing activities³.

* The other options are correct because:

* A. Properly designed tests that pass reduce the level of risk in a system, as they verify that the system meets the expected quality attributes and satisfies the needs and expectations of the users and clients⁴. Risk is the potential for loss or harm due to the occurrence of an undesirable event⁵. Testing can help to identify, analyze, prioritize, and mitigate the risks associated with the software product and project⁶.

* C. Software testing identifies defects, which can be used to improve development activities, as they provide feedback on the quality of the software and the effectiveness of the development processes⁷. Defects are flaws or errors in the software that cause it to deviate from the expected or required results or behavior. Testing can help to detect, report, track, and resolve the defects, and prevent them from recurring in the future.

* D. Performing a review of the requirement specifications before implementing the system can enhance quality, as it can ensure that the requirements are clear, complete, consistent, testable, and aligned with the needs and expectations of the users and clients. Requirements are the specifications of what the software should do and how it should do it. Testing can help to validate that the requirements are met by the software, and verify that the software is implemented according to the requirements.

NEW QUESTION # 139

Shripriya is defining the guidelines for the review process implementation in her company. Which of the following statements is LEAST likely to have been recommended by her?

- A. Review initiation is the stage when the review team starts the discussion on the review comments
- B. Large sized work products should be reviewed in one go because you will have to spend too much time if you split it into multiple reviews
- C. Defect reports should be created for every review found
- D. Independent of the size of the work products, planning for the review should be performed

Answer: B

NEW QUESTION # 140

.....

In today's competitive IT industry, passing ISTQB certification ISTQB-CTFL exam has a lot of benefits. Gaining ISTQB ISTQB-CTFL certification can increase your salary. People who have got ISTQB ISTQB-CTFL certification often have much higher salary than counterparts who don't have the certificate. But ISTQB Certification ISTQB-CTFL Exam is not very easy, so TrainingQuiz is a website that can help you grow your salary.
