With precious time passing away, many exam candidates are making progress with high speed and efficiency with the help of our H35-211_V2.5 study guide. You cannot lag behind and with our H35-211_V2.5 preparation materials, and your goals will be easier to fix. So stop idling away your precious time and begin your review with the help of our H35-211_V2.5 learning quiz as soon as possible, and you will pass the exam in the least time.

Huawei H35-211_V2.5 (HCIP-Access V2.5) Certification Exam is a professional-level certification that validates the knowledge and skills required to plan, design, deploy, and maintain Huawei access network solutions. H35-211_V2.5 exam covers a wide range of topics, including access network architecture, access network planning and optimization, access network deployment and maintenance, and access network security. HCIP-Access V2.5 certification is designed for network engineers and technicians who work with Huawei access network solutions and want to enhance their skills and knowledge to become experts in their field.

Huawei H35-211_V2.5 (HCIP-Access V2.5) Certification Exam is a professional-level certification offered by Huawei Technologies Co. Ltd. H35-211_V2.5 exam is designed to validate the knowledge and skills of IT professionals in the field of access network technologies. H35-211_V2.5 exam is intended for network engineers, network architects, and other IT professionals who are responsible for designing, deploying, and maintaining access networks.

Practice To H35-211_V2.5 - Remarkable Practice On your HCIP-Access V2.5 Exam

In order to let you have a deep understanding of our H35-211_V2.5 learning guide, our company designed the free demos for our customers. We will provide you with free demos of our study materials before you buy our products. If you want to know our H35-211_V2.5 training materials, you can download them from the web page of our company. If you use the free demos of our H35-211_V2.5 study engine, you will find that our products are very useful for you to pass your H35-211_V2.5 exam and get the certification.

Huawei H35-211_V2.5 (HCIP-Access V2.5) Exam is a certification that demonstrates the individual's expertise and proficiency in the field of enterprise-level access network technologies. H35-211_V2.5 exam tests the candidate's knowledge and understanding of various aspects of access network planning, design, deployment, operation, and maintenance. HCIP-Access V2.5 certification is recognized globally as a validation of the individual's skills and is highly valued by employers.

Huawei HCIP-Access V2.5 Sample Questions (Q23-Q28):

NEW QUESTION # 23

(Radio) In the ACL, if you need to filter packets by source IP, destination IP, and port number, the ACL number template to create is:

- A. 3000-3999
- B. 5000-5999
- C. 2000-2999
- D. 4000-4999

Answer: A

Explanation:

On Huawei VRP, Advanced IPv4 ACLs (which can match source IP, destination IP, and L4 port numbers) use the 3000-3999 numbering range.

2000-2999 = Basic IPv4 ACL (matches source IP only).

3000-3999 = Advanced IPv4 ACL (matches source/destination IP, protocol, ports).

4000-4999 = Layer 2 (MAC) ACL.

5000-5999 = User-defined/other ranges, not the standard advanced IPv4 range.

Therefore, to match IPs and ports, select 3000-3999.

References: HCIP-Access V2.5 - ACL Principles and Numbering; Huawei VRP ACL Configuration Guide - IPv4 Basic vs. Advanced ACL Ranges.

NEW QUESTION # 24

The (radio) 10G GPON system uses XGEN frames to encapsulate data, and the PORT ID is defined in the XGEN header as () bits.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

NEW QUESTION # 25

Type B protection provides redundant protection for both OLT PON ports and backbone fibers when OLT or OLT PON If the port or trunk fiber fails, manually switch to another - luguang.

- A. False
- B. True

Answer: A

NEW QUESTION # 26

If the ONT zero touch provisioning function is enabled on the eSight, you can configure multiple service profiles. Which parameters

can be set on the multi-service profile management tab page?

- A. Default VLAN
- B. Number of Ethernet ports
- C. ONU type
- D. Voice VLAN
- E. VLAN

Answer: A,D,E

NEW QUESTION # 27

Which of the following statements about congestion avoidance is correct?

- A. Early drop and tail drop cannot coexist.
- B. Early drop indicates that packets are dropped before the number of packets reaches the preset threshold of packet numbers. This prevents queue congestion.
- C. When the number of packets exceeds the early drop threshold, packets are randomly dropped to avoid queue congestion without affecting services.
- D. The random drop probability in weighted early drop is related to the upper and lower thresholds.

Answer: D

Explanation:

WRED (weighted early drop) uses lower and upper thresholds to determine a probabilistic drop curve; the drop probability scales with the average queue length between these thresholds-therefore D is correct.

A is incorrect because early dropping inevitably affects services to some extent; it's designed to trade small, controlled loss for stability.

B is incorrect; devices use early drop before buffers fill, and when full, tail drop still applies-both mechanisms coexist.

C is imprecise in Huawei's terminology; early drop begins when the average queue depth crosses the lower threshold and increases up to the upper threshold, not simply "before a preset threshold" without that two- threshold relationship.

Reference: HCIP-Access V2.5 - WRED thresholds and probability model; coexistence of early drop and tail drop.

NEW QUESTION # 28
