

AZ-104 Exam - AZ-104 Exam Fragen

Exact QuestionsMicrosoft - AZ-104

office.

C. Allow inbound TCP port 8080 to the domain controllers in the Miami office.

D. Install Azure AD Connect on a server in the Miami office and enable Pass-through Authentication

E. Install the Active Directory Federation Services (AD FS) role on a domain controller in the Miami office.

Answer: B D

Explanation

Every Azure AD directory comes with an initial domain name in the form of domainname.onmicrosoft.com. The initial domain name cannot be changed or deleted, but you can add your corporate domain name to Azure AD as well. For example, your organization probably has other domain names used to do business and users who sign in using your corporate domain name. Adding custom domain names to Azure AD allows you to assign user names in the directory that are familiar to your users, such as 'alice@contoso.com.' instead of 'alice@domain.name.onmicrosoft.com'.

Scenario:

Network Infrastructure: Each office has a local data center that contains all the servers for that office. Each office has a dedicated connection to the Internet.

Humongous Insurance has a single-domain Active Directory forest named humongousinsurance.com

Planned Azure AD Infrastructure: The on-premises Active Directory domain will be synchronized to Azure AD.

Die Produkte von ZertPruefung werden von den erfahrungsreichen IT-Fachleuten nach ihren Kenntnissen und Erfahrungen bearbeitet. Wenn Sie sich an der Microsoft AZ-104 Zertifizierungsprüfung beteiligen wollen, wählen Sie doch ZertPruefung. ZertPruefung bietet Ihnen umfassende Prüfungsmaterialien von guter Qualität, so dass Sie sich besser auf die fachliche Microsoft AZ-104 Prüfung vorbereiten und das AZ-104 Zertifikat erhalten.

Die Microsoft AZ-104-Prüfung ist für IT-Fachleute ausgelegt, die sich dafür interessieren, zertifizierte Azure-Administratoren zu werden. Diese Zertifizierungsprüfung misst die Fähigkeiten und Kenntnisse, die für die Verwaltung und Aufrechterhaltung von Microsoft Azure -Ressourcen erforderlich sind. Kandidaten, die die AZ-104-Prüfung bestehen, erhalten die Microsoft Certified: Azure Administrator Associate Certification, die ein wertvolles Zeugnis ist, das ihre Fähigkeiten zur Verwaltung von Azure-Ressourcen demonstriert.

AZ-104 PrüfungGuide, Microsoft AZ-104 Zertifikat - Microsoft Azure Administrator

Die Microsoft AZ-104 Zertifizierungsprüfung ist der erste Schritt zum Berufserfolg für IT-Fachleute. Durch die Microsoft AZ-104 Zertifizierungsprüfung haben Sie schon den ersten Fuß auf die Spitze Ihrer Karriere gesetzt. ZertPruefung wird Ihnen helfen, die Microsoft AZ-104 Zertifizierungsprüfung zu bestehen.

Microsoft Azure Administrator AZ-104 Prüfungsfragen mit Lösungen (Q387-Q392):

387. Frage

You have an Azure subscription that contains a storage account.

You have an on-premises server named Server1 that runs Windows Server 2016. Server1 has 2 TB of data.

You need to transfer the data to the storage account by using the Azure Import/Export service.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Antwort:

Begründung:

- 1 - Attach an external disk to Server1 and then run waimportexport.exe.
- 2 - From the Azure portal, create an import job.
- 3 - Detach the external disks from Server1 and ship the disks to an Azure data center.

Explanation:

At a high level, an import job involves the following steps:

Step 1: Attach an external disk to Server1 and then run waimportexport.exe

Determine data to be imported, number of drives you need, destination blob location for your data in Azure storage.

Use the WAImportExport tool to copy data to disk drives. Encrypt the disk drives with BitLocker.

Step 2: From the Azure portal, create an import job.

Create an import job in your target storage account in Azure portal. Upload the drive journal files.

Step 3: Detach the external disks from Server1 and ship the disks to an Azure data center.

Provide the return address and carrier account number for shipping the drives back to you.

Ship the disk drives to the shipping address provided during job creation.

Step 4: From the Azure portal, update the import job

Update the delivery tracking number in the import job details and submit the import job.

The drives are received and processed at the Azure data center.

The drives are shipped using your carrier account to the return address provided in the import job.

388. Frage

You have an Azure subscription that contains an Azure Storage account named storage1 and the users shown in the following table.

You plan to monitor storage1 and to configure email notifications for the signals shown in the following table.

You need to identify the minimum number of alert rules and action groups required for the planned monitoring.

How many alert rules and action groups should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Antwort:

Begründung:

Reference:

<https://docs.microsoft.com/en-us/azure/azure-monitor/platform/action-groups>

389. Frage

You have an Azure subscription named Subscription1 that contains the resources shown in the following table.

The status of VM1 is Running.

You assign an Azure policy as shown in the exhibit. (Click the Exhibit tab.)

You assign the policy by using the following parameters:

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Antwort:

Begründung:

Explanation:

Not allowed resource types (Deny): Prevents a list of resource types from being deployed. This means this policy specifically prevents a list of resource types from being deployed. So that refers that except deployment all the other operations like start/stop or move etc. are not prevented. But to be noted if the resource already exists, it just marks it as non-compliant.

Replicated this scenario in LAB keeping VM running and below are the outcome :

- * VM is not deallocated
- * Able to stop and start VM successfully.
- * Not able to create new virtual network or VM.
- * Not able to modify VM size.
- * Not able change the address space of the virtual network.
- * Successfully moved virtual network and VM in another resource group.

Statement 1 : Yes

Based on above experiment the policy will mark the VNET1 as non-compliant but it can be moved to RG2 . Hence this statement is true.

Statement 2 : No

Based on above experiment the policy will mark the VM as non-compliant but it will still be running, not deallocated. Hence this statement is False.

Statement 3 : No

Based on above experiment the address space for VNET2 can not be modified. Hence this statement is False.

390. Frage

You have a Microsoft Entra user named User1 and a read-access geo-redundant storage (RA-GRS) account named contoso2023.

You need to meet the following requirements:

- * User1 must be able to write blob data to contoso2023.
- * The contoso2023 account must fail over to its secondary endpoint.

Which two settings should you configure? To answer, select the appropriate settings in the answer area.

NOTE Each correct selection is worth one point.

Antwort:

Begründung:

Explanation:

391. Frage

You onboard 10 Azure virtual machines to Azure Automation State Configuration.

You need to use Azure Automation State Configuration to manage the ongoing consistency of the virtual machine configurations.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Antwort:

Begründung:

- 1 - Upload a configuration to Azure Automation State Configuration.
- 2 - Compile a configuration into a node configuration.
- 3 - Assign the node configuration
