If you have any concerns, you can first try HPE6-A88 PDF VCE free demo and answers, and then make a decision whether to choose our HPE6-A88 dumps or not.

HPE Aruba Networking ClearPass Exam Sample Questions (Q36-Q41):

NEW QUESTION # 36

A company is transitioning to a cloud-first strategy and has noticed an increase in the number of IoT devices and remote users connecting to their network. They are concerned about maintaining security and visibility as they migrate more applications to the

cloud. Which strategies would best address their concerns?

- A. Limiting network access to only a few trusted devices to minimize threats.
- B. Implementing a traditional perimeter-based security approach to monitor all activities.
- C. Adopting a Zero Trust model with continuous, closed-loop security and role-based access policies.

Answer: C

Explanation:

A Zero Trust model enforces continuous verification of users and devices, applies role-based access policies, and maintains closed-loop security. This approach provides strong security and visibility for IoT devices and remote users while supporting cloud-first architectures where traditional network perimeters are no longer effective.

NEW QUESTION # 37

An IT professional is configuring the OnGuard agentless solution for a company's Windows clients. They need to ensure that the necessary prerequisites are met. Which configuration is required on the Policy Manager server?

- A. The Policy Manager server should be running both Agentless OnGuard and the Persistent Agent.
- B. The Policy Manager server should be joined to a Domain.
- C. The Policy Manager server should not support SMB v2 on Windows endpoints.

Answer: B

Explanation:

Unlike agent-based solutions where the client initiates contact, Agentless OnGuard requires ClearPass to "reach out" to the Windows endpoint using WMI and SMB. For ClearPass to have the necessary permissions to perform these remote administrative tasks on domain-joined machines, the ClearPass Policy Manager server must itself be joined to the Active Directory domain. This allows the server to use domain administrator or service account credentials to authenticate against the target endpoints.

NEW QUESTION # 38

An IT administrator needs to ensure that guest receipts for registrations are sent through both email and SMS simultaneously. They have already configured the email relay. What additional step must they take to meet this need?

- A. Enable the dual messaging feature in the ClearPass security settings.
- B. Set up an external SMTP server to handle both email and SMS notifications.
- C. Configure the SMS Gateway under ClearPass Guest by clicking the Configure SMS Gateway link in the Messaging Setup window.

Answer: C

Explanation:

To send guest receipts through both email and SMS, the administrator must configure the SMS Gateway in ClearPass Guest by selecting "Configure SMS Gateway" in the Messaging Setup window. This enables ClearPass to deliver notifications via both communication channels simultaneously.

NEW QUESTION # 39

When managing network access through ClearPass, an administrator notices that client status changes are causing repeated disconnections and re-authentications. The administrator wants to prevent the service from making the same enforcement decision without considering newly gathered information. What action should the administrator take?

- A. Select the option 'Use Cached Results' on the enforcement tab.
- B. Enable automatic endpoint reconciliation.
- C. Increase the timeout period for client re-authentication.

Answer: B

Explanation:

Enabling automatic endpoint reconciliation ensures that ClearPass updates endpoint attributes dynamically as new information is gathered. This prevents repeated disconnections and redundant enforcement decisions by allowing ClearPass to adapt to the latest endpoint context without reapplying identical policies unnecessarily.

NEW QUESTION # 40

An IT technician is tasked with ensuring that the Network Access Device's (NAD) trust chain is properly configured on ClearPass. They select RadSec for the network device and observe that the PSK is automatically set to 'radsec'. What critical step should the technician take next to ensure secure communication?

- A. Verify that the NAD's trust chain is trusted on ClearPass.
- B. Manually override the PSK field with a custom value.
- C. Reboot the network device to apply the RadSec configuration.

Answer: A

Explanation:

After selecting RadSec, the technician must verify that the Network Access Device's (NAD) trust chain is trusted on ClearPass. RadSec relies on mutual TLS authentication, and secure communication is only established when ClearPass trusts the NAD's certificate chain. The PSK 'radsec' is a placeholder and not used for TLS-based authentication.

NEW QUESTION # 41

.....

Almost every HPE Aruba Networking ClearPass Exam (HPE6-A88) test candidate nowadays is confused about the HPE Aruba Networking ClearPass Exam (HPE6-A88) study material. They don't know where to download updated HPE6-A88 questions that can help them prepare quickly for the HPE Aruba Networking ClearPass Exam (HPE6-A88) test. Some rely on outdated HPE Aruba Networking ClearPass Exam (HPE6-A88) questions and suffer from the loss of money and time.
