100% Pass 2026 The Best NICET Valid ITFAS-Level-1 Test Pattern

Our Inspection and Testing of Fire Alarm Systems Level I Exam study question is compiled and verified by the first-rate experts in the industry domestically and they are linked closely with the real exam. Our products' contents cover the entire syllabus of the exam and refer to the past years' exam papers. Our test bank provides all the questions which may appear in the real exam and all the important information about the exam. You can use the practice test software to test whether you have mastered the Inspection and Testing of Fire Alarm Systems Level I Exam test practice dump and the function of stimulating the exam to be familiar with the real exam's pace, atmosphere and environment. So our ITFAS-Level-1 Exam Questions are real-exam-based and convenient for the clients to prepare for the exam.

NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q63-Q68):

NEW QUESTION # 63

Which three of the following are how a McCulloh transmitter should be inspected? (Choose three.)

- A. Physical condition
- B. System normal condition
- C. Distinct waterflow condition
- D. Verify location

Answer: A,B,D

Explanation:

McCulloh transmitters are part of older fire alarm systems but are still maintained in some jurisdictions.

Inspection focuses on general condition, correct system status, and location verification.

NFPA 72 (2022), Table 14.3.1 - Inspection Frequencies:

Under McCulloh Transmitter:

* "Inspect physical condition"

* "Verify location"

* "Confirm system normal condition"

"Distinct waterflow condition" refers to alarm testing and is not part of the inspection phase.

Correct answers:

* Physical condition

* System normal condition

* Verify location

NEW QUESTION # 64

How should the documentation cabinet be labeled?

- A. System record documents
- B. System records
- C. Fire alarm record documents
- D. Fire alarm documents

Answer: A

Explanation:

NFPA 72 mandates that fire alarm system documentation be stored in a dedicated cabinet, and that cabinet must be clearly labeled.

The exact phrase required is:

NFPA 72 (2022), Section 7.7.2:

"The cabinet shall be prominently labeled 'SYSTEM RECORD DOCUMENTS.'"

This ensures that anyone - including inspectors, AHJs, or technicians - can easily identify where critical system information is stored.

Correct answer: D. System record documents

NEW QUESTION # 65

An off-normal signal shall be initiated during which of the following travel distances of the valve control apparatus from its normal position?

- A. 1/3
- B. 1/2
- C. 1/4
- D. 1/5

Answer: C

Explanation:

This question is referring to supervisory signaling for control valves in sprinkler systems. When a valve begins to move from its normal (open) position, the fire alarm system must detect and signal this before it reaches too far out of position.

NFPA 72 (2022), Section 17.16.1.3:

"Off-normal signal shall be initiated during the first one-quarter (1/4) of the valve travel distance from its normal position." This ensures timely detection if someone begins to close a sprinkler valve, which could disable the fire suppression system.

Correct answer: B. 1/4

NEW QUESTION # 66

A disconnection of the primary phone line shall cause which of the following events to occur?

- A. Local annunciation only
- **B. Supervisory condition**
- C. Notification via secondary phone line
- D. Activation of notification appliance

Answer: B

Explanation:

Fire alarm systems that communicate via telephone lines are required to monitor those lines for disconnection.

If the primary line fails, it must be reported as a supervisory condition, and the system will attempt communication via the secondary line.

NFPA 72 (2022), Section 26.6.4.4.1:

"A single communications technology shall be monitored for integrity. Loss of the supervising line shall result in a supervisory signal..."

So, if the primary phone line is disconnected, the correct system response is to issue a supervisory signal, not a general alarm or just a local alert.

Correct answer: D. Supervisory condition

NEW QUESTION # 67

The minimum supervising station signaling requirement for a fire alarm system that monitors a sprinkler flow and tamper switch shall include which set of signals?

- **A. Alarm, trouble, and supervisory**
- B. Alarm, trouble, and phone line failure
- C. Alarm, trouble, supervisory, and daily test
- D. Alarm, trouble, supervisory, and primary power

Answer: A

Explanation:

When a system monitors sprinkler water flow (alarm) and valve tamper switches (supervisory), the system must send the following to the supervising station:

- * Alarm signals (from flow)
- * Trouble signals (e.g., open circuits)
- * Supervisory signals (e.g., valve partially closed)

NFPA 72 (2022), Section 26.2.2.1:

"A fire alarm system connected to a supervising station shall transmit alarm, trouble, and supervisory signals..." There is no requirement for phone line failure or primary power loss to be transmitted unless required by local code.

Correct answer: B. Alarm, trouble, and supervisory

NEW QUESTION # 68

.....

If you are curious or doubtful about the proficiency of our ITFAS-Level-1 practice materials, we can explain the painstakingly word we did behind the light. By abstracting most useful content into the ITFAS-Level-1 practice materials, they have help former customers gain success easily and smoothly. The most important part is that all contents were being sifted with diligent attention. No errors or mistakes will be found within our ITFAS-Level-1 practice materials. We stress the primacy of customers' interests, and make all the preoccupation based on your needs.
