

GH-900 Musterprüfungsfragen - GH-900 Simulationsfragen

Wenn Sie sich noch anstrengend um die GH-900 Zertifizierungsprüfung bemühen, dann kann Pass4Test in diesem Moment Ihnen helfen, Problem zu lösen. Pass4Test bietet Ihnen Schulungsunterlagen von hoher Qualität, damit Sie die Prüfung bestehen und exzellentes Mitglied der Microsoft GH-900 Zertifizierung werden können. Wenn Sie sich entscheiden, durch die Microsoft GH-900 Zertifizierungsprüfung sich zu verbessern, dann wählen Sie bitte Pass4Test. Pass4Test zu wählen ist keinesfalls nicht falsch. Unser Pass4Test verspricht, dass Sie beim ersten Versuch die Microsoft GH-900 Zertifizierungsprüfung bestehen und somit das Zertifikat bekommen können. So können Sie sich sicher verbessern.

Microsoft GH-900 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.

Thema 2	• Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.
Thema 3	• Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.
Thema 4	• Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.
Thema 5	• Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI • CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.
Thema 6	• Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI • CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.

GH-900 zu bestehen mit allseitigen Garantien

Pass4Test ist eine erstklassige Website für die Microsoft GH-900 Zertifizierungsprüfung. Im Pass4Test können Sie Tipps und Prüfungsmaterialien finden. Sie können auch die Examensfragen-und antworten teilweise als Probe kostenlos herunterladen. Pass4Test kann Ihnen umsonst die Updaets der Prüfungsmaterialien für die Microsoft GH-900 Prüfung bieten. Alle unseren Zertifizierungsprüfungen enthalten Antworten. Unser Eliteteam von IT-Fachleuten wird die neuesten und richtigen Examensübungen nach ihren fachlichen Erfahrungen bearbeiten, um Ihnen bei der Prüfung zu helfen. Alles in allem, wir werden Ihnen alle einschlägigen Materialien in Bezug auf die Microsoft GH-900 Zertifizierungsprüfung bieten.

Microsoft GitHub Foundations GH-900 Prüfungsfragen mit Lösungen (Q38-Q43):

38. Frage

Which of the following can be performed within GitHub Mobile?

- A. Utilizing the mobile device as a self-hosted runner
- **B. Managing notifications from github.com**
- C. Chat with other GitHub Mobile users via voice calling
- D. Managing enterprise and organization settings
- E. Forking and cloning repositories

Antwort: B

Begründung:

GitHub Mobile provides a streamlined experience for managing your GitHub notifications and participating in discussions, but it does not offer full functionality compared to the desktop or web interface.

Managing Notifications:

Option E is correct because GitHub Mobile allows users to manage notifications, keeping them up to date with their repositories, issues, pull requests, and other activities on GitHub.

Incorrect Options:

Option A is incorrect because GitHub Mobile cannot be used as a self-hosted runner.

Option B is incorrect because managing enterprise and organization settings is not supported in GitHub Mobile.

Option C is incorrect because GitHub Mobile does not offer a chat or voice calling feature.

Option D is incorrect because forking and cloning repositories are not actions available in GitHub Mobile.

Reference:

GitHub Docs: GitHub Mobile

39. Frage

Which of the following best describes GitHub flow?

- A. A strict workflow that enforces a linear development process with all changes made directly on the main branch
- **B. A lightweight workflow that allows for safe experimentation with new ideas and collaboration on projects through branching, pull requests, and merging**
- C. A strategy where separate branches are created for each release, and pull requests are used to collaborate on and approve releases
- D. A branching model that uses feature branches and multiple primary branches

Antwort: B

Begründung:

GitHub Flow is a simple, yet powerful, branching strategy that is widely used in modern software development. It emphasizes collaboration and flexibility.

GitHub Flow:

Option C is correct because GitHub Flow is a lightweight workflow designed for safe experimentation and collaboration. It involves creating branches for new features or fixes, opening pull requests for review, and merging changes back into the main branch after approval.

Incorrect Options:

Option A is incorrect because GitHub Flow uses a single main branch, not multiple primary branches.

Option B is incorrect because GitHub Flow is not specifically designed around releases; it is more focused on continuous development and integration.

Option D is incorrect because GitHub Flow is not strict or linear; it encourages branching and pull requests rather than direct changes on the main branch.

40. Frage

What does a CODEOWNERS file do in a repository?

- A. Defines access permissions for the repository
- B. Requires peer code review for code changes
- C. Restricts who can edit specific files
- **D. Sets the reviewers for pull requests automatically**

Antwort: D

Begründung:

The CODEOWNERS file in a GitHub repository is used to define individuals or teams that are responsible for specific parts of the codebase. When changes are made to files or directories that match the patterns specified in the CODEOWNERS file, GitHub automatically requests reviews from the listed code owners.

Setting Reviewers Automatically:

Option D is correct because the primary purpose of a CODEOWNERS file is to automatically set reviewers for pull requests that

affect the specified files or directories. This ensures that the appropriate team members are notified and review the changes before they are merged.

Incorrect Options:

Option A is incorrect because the CODEOWNERS file does not restrict who can edit specific files; it only influences who is required to review changes.

Option B is partially related but not fully accurate because while CODEOWNERS does require certain reviews, it does not mandate peer review for all code changes.

Option C is incorrect because the CODEOWNERS file does not define access permissions for the repository; it deals with code review processes.

GitHub Blog: Automatically Requesting Reviews with CODEOWNERS

41. Frage

Which of the following are advantages of saved replies?

(Each correct answer presents part of the solution. Choose two.)

- A. Saved replies are tied to a GitHub user's personal account.
- B. Saved replies allow you to create a reusable response to issues and pull requests.
- C. Saved replies will send auto notifications when a user is tagged to an issue.
- D. Saved replies are allocated at the enterprise level for all users.

Antwort: A,B

Begründung:

Saved replies in GitHub are a feature that allows users to create and save templates of commonly used responses for issues and pull requests. This feature can significantly enhance productivity and ensure consistent communication.

Saved Replies Are Tied to a User's Personal Account:

Option A is correct because saved replies are specific to a user's GitHub account, meaning they are accessible to the user across all repositories they have access to.

Saved Replies Allow Reusable Responses:

Option C is correct because the primary purpose of saved replies is to allow users to create reusable responses for issues and pull requests, saving time and ensuring consistency.

Incorrect Options:

Option B is incorrect because saved replies are not allocated at the enterprise level; they are specific to individual user accounts.

Option D is incorrect because saved replies do not send auto notifications; they are manually inserted by the user when responding to issues or pull requests.

GitHub Docs: Using Saved Replies

42. Frage

What qualifier finds issues that mention a certain user?

- A. threads:
- B. mentioned:
- C. Smentioned:
- D. mentions:

Antwort: D

Begründung:

The qualifier mentions: is used in GitHub's search functionality to find issues that mention a certain user. For example, if you want to find all issues where a specific user is mentioned, you would use mentions:username. This helps in tracking where a user has been involved in discussions across issues or pull requests.
