CompTIA Linux+ Certification Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27
A systems administrator attempts to edit a file as root, but receives the following error:

```
E212: Cannot open file for writing

# ls -l /etc/resolv.conf
-rw-------. 1 root admin 141 May 30 11:00 /etc/resolv.conf

# lsattr /etc/resolv.conf
----i----------    /etc/resolv.conf
```

Which of the following commands allows the administrator to edit the file?

- A. chmod 750 /etc/resolv.conf
- B. chgrp root /etc/resolv.conf
- C. chown root /etc/resolv.conf
- D. chattr -i /etc/resolv.conf

Answer: D

Explanation:
The lsattr output shows the immutable (i) attribute set on /etc/resolv.conf. This prevents any modifications, even by root. Running chattr -i removes the immutable flag, allowing the administrator to edit the file.

NEW QUESTION # 28
A Linux administrator wants to make the ENABLE_AUTHvariable set to 1 and available to the environment of subsequently executed commands. Which of the following should the administrator use for this task?

- A. ENABLE_AUTH=1
- B. ENABLE_AUTH=$(echo $ENABLE_AUTH)
- C. export ENABLE_AUTH=1
- D. let ENABLE_AUTH=1

Answer: C

Explanation:
The export command sets an environment variable and makes it available to subsequently executed commands and child processes, ensuring ENABLE_AUTH=1 is recognized system- wide in that shell session.

NEW QUESTION # 29

Not all objects will be used, and some may be used more than once.
If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.
