

Professional-Cloud-DevOps-Engineer Reliable Real Test, Professional-Cloud-DevOps-Engineer Exam Introduction

DOWNLOAD the newest SureTorrent Professional-Cloud-DevOps-Engineer PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1X0gJj-snMrkC-32G170sjRNRdi5oGb7M>

There are many large and small platforms for selling examination materials in the market, which are dazzling, but most of them cannot guarantee sufficient safety and reliability. Are you worried about the security of your payment while browsing? Professional-Cloud-DevOps-Engineer Test Torrent can ensure the security of the purchase process, product download and installation safe and virus-free. If you have any doubt about this, we will provide you professional personnel to remotely guide the installation and use.

To prepare for the exam, candidates should have a solid understanding of cloud computing concepts and principles, as well as experience working with Google Cloud Platform services such as Compute Engine, Kubernetes Engine, Cloud Storage, and Cloud Pub/Sub. Additionally, candidates should have experience with DevOps methodologies and tools such as Git, Jenkins, and Ansible.

SureTorrent Google Professional-Cloud-DevOps-Engineer Study Material In Different Forms

Although a lot of products are cheap, but the quality is poor, perhaps users have the same concern for our latest Professional-Cloud-DevOps-Engineer exam preparation materials. Here, we solemnly promise to users that our Professional-Cloud-DevOps-Engineer exam questions error rate is zero. Everything that appears in our products has been inspected by experts. In our Professional-Cloud-DevOps-Engineer practice materials, users will not even find a small error, such as spelling errors or grammatical errors. It is believed that no one is willing to buy defective products, so, the Professional-Cloud-DevOps-Engineer study guide has established a strict quality control system.

The Google Cloud Certified - Professional Cloud DevOps Engineer Exam certification exam tests the candidate's ability to design, implement, and manage a DevOps culture on the Google Cloud platform. Professional-Cloud-DevOps-Engineer Exam covers a wide range of topics, including infrastructure automation, configuration management, continuous integration and delivery, monitoring and logging, and incident management. Candidates are also expected to have hands-on experience with Google Cloud tools such as Kubernetes, Terraform, and Cloud Build.

Google Professional-Cloud-DevOps-Engineer certification is highly valued in the industry and is recognized as a mark of excellence in the field of cloud-based DevOps. Google Cloud Certified - Professional Cloud DevOps Engineer Exam certification is ideal for professionals who are looking to advance their careers in DevOps and cloud computing, and who are interested in working with Google Cloud technologies. By earning this certification, professionals can demonstrate their ability to design, implement, and manage DevOps workflows on Google Cloud, and can enhance their credibility with employers and clients alike.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q204-Q209):

NEW QUESTION # 204

You need to reduce the cost of virtual machines (VM) for your organization. After reviewing different options, you decide to leverage preemptible VM instances. Which application is suitable for preemptible VMs?

- A. A distributed, eventually consistent NoSQL database cluster with sufficient quorum
- **B. A GPU-accelerated video rendering platform that retrieves and stores videos in a storage bucket**
- C. The organization's public-facing website
- D. A scalable in-memory caching system

Answer: B

Explanation:

<https://cloud.google.com/compute/docs/instances/preemptible>

NEW QUESTION # 205

You created a Stackdriver chart for CPU utilization in a dashboard within your workspace project. You want to share the chart with your Site Reliability Engineering (SRE) team only. You want to ensure you follow the principle of least privilege. What should you do?

- A. Share the workspace Project ID with the SRE team. Assign the SRE team the Monitoring Viewer IAM role in the workspace project.
- **B. Share the workspace Project ID with the SRE team. Assign the SRE team the Dashboard Viewer IAM role in the workspace project.**
- C. Click "Share chart by URL" and provide the URL to the SRE team. Assign the SRE team the Monitoring Viewer IAM role in the workspace project.
- D. Click "Share chart by URL" and provide the URL to the SRE team. Assign the SRE team the Dashboard Viewer IAM role in the workspace project.

Answer: B

NEW QUESTION # 206

Your team is running microservices in Google Kubernetes Engine (GKE) You want to detect consumption of an error budget to protect customers and define release policies What should you do?

- A. Create SLIs from metrics Enable Alert Policies if the services do not pass
- B. Use the metrics from Anthos Service Mesh to measure the health of the microservices
- C. Create a SLO and configure uptime checks for your services Enable Alert Policies if the services do not pass
- **D. Create a SLO Create an Alert Policy on select slo_bum_rate**

Answer: D

NEW QUESTION # 207

You are designing a deployment technique for your applications on Google Cloud. As part Of your deployment planning, you want to use live traffic to gather performance metrics for new versions Of your applications. You need to test against the full production load before your applications are launched. What should you do?

- A. Use canary testing with continuous deployment.
- B. Use A/B testing with blue/green deployment.
- C. Use canary testing with rolling updates deployment,
- **D. Use shadow testing with continuous deployment.**

Answer: D

Explanation:

Explanation

The correct answer is B. Use shadow testing with continuous deployment.

Shadow testing is a deployment technique that involves routing a copy of the live traffic to a new version of the application, without affecting the production environment. This way, you can gather performance metrics and compare them with the current version, without exposing the new version to the users. Shadow testing can help you test against the full production load and identify any issues or bottlenecks before launching the new version. You can use continuous deployment to automate the process of deploying the new version after it passes the shadow testing.

NEW QUESTION # 208

Your product is currently deployed in three Google Cloud Platform (GCP) zones with your users divided between the zones. You can fail over from one zone to another, but it causes a 10-minute service disruption for the affected users. You typically experience a database failure once per quarter and can detect it within five minutes. You are cataloging the reliability risks of a new real-time chat feature for your product. You catalog the following information for each risk:

- * Mean Time to Detect (MTTD) in minutes
- * Mean Time to Repair (MTTR) in minutes
- * Mean Time Between Failure (MTBF) in days
- * User Impact Percentage

The chat feature requires a new database system that takes twice as long to successfully fail over between zones. You want to account for the risk of the new database failing in one zone. What would be the values for the risk of database failover with the new system?

- A. MTTD:5
MTTR: 20
MTBF: 90
Impact: 50%
- B. MTTD:5
MTTR: 10
MTBF: 90
Impact 50%
- C. MTTD: 5
MTTR: 10
MTBF: 90
Impact: 33%
- **D. MTTD:5
MTTR: 20
MTBF: 90
Impact: 33%**

Answer: D
