Are you often regretful that you have purchased an inappropriate product? Unlike other platforms for selling test materials, in order to make you more aware of your needs, ISO-IEC-27001-Foundation study materials provide sample questions for you to download for free. You can use the sample questions to learn some of the topics about ISO-IEC-27001-Foundation study materials and familiarize yourself with the ISO-IEC-27001-Foundation software in advance. If you feel that the ISO-IEC-27001-Foundation study materials are satisfying to you, you can choose to purchase our complete question bank. After the payment, you will receive the email sent by the system within 5-10 minutes. Click on the login to start learning immediately with ISO-IEC-27001-Foundation study materials. No need to wait.

APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q10-Q15):

NEW QUESTION # 10

Which statement describes the Classification of information control in Annex A of ISO/IEC 27001?

- A. Ensures that security perimeters are used to protect assets
- B. Ensures the rules to control physical and logical access apply to assets
- C. Ensures that information is classified based on confidentiality, integrity and availability
- D. Ensures that all information assets are labelled with their classification

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27002:2022 standards:

Annex A.5.12 (Classification of information) states:

"Information should be classified according to the information security needs of the organization based on confidentiality, integrity and availability." This aligns directly with option B. Option A (labelling) is a separate control (Annex A.5.13). Option C (security perimeters) is under physical controls (Annex A.7.1). Option D (access control rules) relates to Annex A.5.15 and A.8.2.

Thus, the verified correct statement for the Classification of information control is B.

NEW QUESTION # 11

Who determines the number of days required for a certification audit?

- A. The external auditor from the Certification Body who will undertake the audit
- B. Both the management representative and the external auditor together
- C. The management representative from the organization to be audited
- D. The lead internal auditor from the organization to be audited

Answer: A

Explanation:

Certification audits are carried out by Certification Bodies (CBs), not the organization itself. ISO/IEC 27001 requires external certification audits to be independent, impartial, and objective. According to ISO/IEC 27006 (Requirements for bodies providing audit and certification of ISMS), the Certification Body determines the audit duration and number of audit days based on factors such as organizational size, complexity, scope, and risk environment. This ensures consistency across organizations and prevents manipulation by the auditee. ISO/IEC 27001 Clause 9.2 and 9.3 address internal audit and management review, but the determination of certification audit days is outside the organization's control; it rests solely with the accredited Certification Body auditors. Thus, answer: A is correct, as the CB's external auditor formally calculates and assigns the audit time.

NEW QUESTION # 12

Which benefit is NOT relevant by implementing an ISMS for an organization?

- A. Information security controls are tailored to suit the organization's specific circumstances
- **B. Information security staff will be qualified to ISO/IEC 27001 Foundation level**
- C. Information security risks are assessed and the probability and/or impact reduced
- D. Information security compliance will increase stakeholder trust in the organization

Answer: B

Explanation:

The benefits of implementing an ISMS under ISO/IEC 27001 are well established. Clause 0.1 (General) explains that an ISMS provides a systematic approach to managing sensitive information and "preserves confidentiality, integrity, and availability of information by applying a risk management process and gives confidence to interested parties that risks are adequately managed."

Option A is correct as a benefit, since trust and confidence from stakeholders is an outcome of compliance.

Option C is also a benefit, since controls are chosen and tailored based on organizational context and risk assessment (Clause 6.1.3). Option D reflects another real benefit—reducing the probability and/or impact of incidents through effective risk management. However, staff qualifications (option B) are not guaranteed benefits of implementing an ISMS. While training and competence (Clause 7.2) are required, the standard does not require or provide ISO/IEC 27001 Foundation-level certification for staff. That is an external training/certification scheme, not an ISMS outcome.

Therefore, the benefit NOT relevant to implementing ISO/IEC 27001 is B.

NEW QUESTION # 13

Which action is an organization required to take to ensure that personnel are competent to perform their assigned tasks within the ISMS?

- A. Ensure that the controls for compliance with legal and contractual requirements are implemented
- B. Ensure all personnel are trained to ISO/IEC 27001 Foundation level
- **C. Hold up-to-date records on training, skills, experience and qualifications**
- D. Identify products which could be used in the organization to improve ISMS performance and effectiveness

Answer: C

Explanation:

Clause 7.2 (Competence) requires the organization to:

- * "determine the necessary competence of person(s) doing work under its control that affects its information security performance;"
- * "ensure that these persons are competent on the basis of appropriate education, training, or experience;"
- * "retain appropriate documented information as evidence of competence." This makes holding up-to-date records on training, skills, experience, and qualifications (D) the correct answer. Option A is irrelevant to competence. Option B is incorrect since ISO does not require Foundation-level training - competence is context-based. Option C is related to compliance but does not ensure individual competence.

Thus, the verified correct answer is D.

NEW QUESTION # 14

Which aspect of ISO/IEC 27001 requires that contractors know about the organization's information security policies?

- A. Competence
- B. Communication
- **C. Awareness**
- D. Nonconformity and corrective action

Answer: C

Explanation:

Clause 7.3 (Awareness) requires:

"Persons doing work under the organization's control shall be aware of: (a) the information security policy; (b) their contribution to the effectiveness of the ISMS, including the benefits of improved information security performance; (c) the implications of not conforming with the ISMS requirements." This applies not only to employees but also contractors and external parties under the
