The study material is available in two formats: Salesforce Arch-303 exam questions in pdf format and an online Salesforce Arch-303 practice test engine. Both formats are designed to help you clear the Salesforce Certified B2C Commerce Architect (Arch-303) with ease.

### Salesforce Certified B2C Commerce Architect Sample Questions (Q44-Q49):

#### **NEW QUESTION # 44**

A client has just pushed a new site live to Production. However during smoketesting. It's found that some customers are not seeing the correct pricing on the Product Detail Page.

What three places would the Architect begin to look for the cause of this Issue?

Choose 3 answers

- A. Check that there was not an error during replication.
- B. Check the Global Preferences to be sure the settings are correct.
- C. Check that the cache is set correctly
- D. Check Log Center
- E. Check the Quota Status page.

**Answer: A,B,C**

Explanation:

To resolve issues where some customers are not seeing the correct pricing on the Product Detail Page, the following places should be examined:

\* Global Preferences (C): It's critical to check the global preferences settings to ensure they align with the intended pricing strategy and configurations. This includes checking currency settings, pricing rules, and tax configurations, which can all influence the pricing displayed to customers.

\* Error during replication (D): If there were errors during data replication, this could lead to inconsistencies such as incorrect pricing being shown. Ensuring that data has been replicated correctly and without errors is essential, particularly when moving from staging to production environments.

\* Cache settings (E): Incorrect cache settings or outdated cached data can cause old or incorrect pricing to be displayed. Clearing the cache or verifying that cache invalidation rules are correctly set can resolve such issues.

These steps are critical for ensuring that the displayed pricing is accurate and consistent, providing a seamless user experience.

#### NEW QUESTION # 45

Northern Trail Outfitters (NTO) wants to migrate its online shop from a custom ecommerce platform to B2CCommerce. NTO needs to migrate several thousands of customer records (profile information, address book). WTO can provide a B2C Commerce feed. It is currently using SHA-256 as an encryption mechanism for the customer passwords.

What approach can the Architect propose?

- A. Do not import customer records and asks customers to create new accounts the first time they try to log in to the B2C Commerce storefront.
- B. Import the customer records, including the hashed password, as B2C Commerce supports SHA-256, and they will be able to log in with their existing password.
- C. Import the customer records, with the hashed password as a custom attribute, and during the login compare the entered password with the hashed password and save it in the password field.
- D. Import the customer records, excluding the password field, and B2C Commerce will automatically require a password reset the first time a customer logs in to the storefront.

**Answer: D**

Explanation:

B2C Commerce does not directly support the import of hashed passwords for use in authentication due to security protocols and the platform's password management system. The best approach is to import customer records without the password field. Upon their first login attempt on the new system, customers would be prompted to reset their password. This method ensures that password security is maintained according to B2C Commerce standards and that customer data remains secure during the transition from the old platform.

#### NEW QUESTION # 46

A developer wants to import the data of different instances.

Which two types of data should the developer consider importing?

Choose 2 answers

- A. Services
- B. Catalog
- C. Metadata
- D. Site configurations
- E. Customers

**Answer: B,E**

Explanation:

When importing data between instances, focusing on significant and impactful data types is essential:

\* Option B (Catalog): Includes all product listings, descriptions, categorizations, and relationships. It's crucial for the eCommerce operation, directly affecting site navigation and customer experience.

\* Option C (Customers): Customer data import is essential for maintaining continuity in customer relationships, access, and personalization across platforms.

These data types are fundamental to the functioning of an eCommerce site and ensure that essential operational data is consistent across different environments or platform migrations.

#### NEW QUESTION # 47

An Architect has been approached by the Business with a request to create a custom product finder. The finder would initially be available on only one site, and would eventually be extended to be available on all sites the Business maintains. There is a requirement that these wrings are also available to be used in a Job context for export to other systems.

Each site will have a different category avatable for use by the product finder.

Where should the Architect store the custom settings for use on both the storefront and in a job context?

- A. Custom Object with an Organizational Scope
- B. Jobs Framework parameters
- C. Category custom attributes
- D. Custom Object with a Site Scope

#### Answer: A

Explanation:

To manage custom settings for a product finder that needs to be accessible both on the storefront and in a job context, storing these settings in a Custom Object with an Organizational Scope is most appropriate. This allows the settings to be centralized and accessible across different sites and job contexts, ensuring consistency and reusability of the configurations:

\* Organizational Scope: Enables settings to be shared across multiple sites without duplicating data, maintaining a single source of truth for configurations that affect various parts of the organization.

\* Custom Object: Provides the flexibility to define specific attributes and values that are unique to the business requirements of the product finder and other integrations.

#### NEW QUESTION # 48

The Architect has been presented with a requirement from the business to implement a new LINK cartridge.

The current site is built on the Storefront Reference Architecture, and the LINK cartridge is certified for Pipelines and Controllers.

On review, the Architect notes that the Jobs are all created in Pipelines.

How should the Architect implement that cartridge to make sure the required jobs run properly?

- A. The job Pipelines must be removed and recreated with scripts.
- B. The job Pipelines must be updated to work as custom job steps.
- C. The job Pipelines must be updated to use SFRA Controllers.
- D. The Job Pipelines must be updated to use SiteGenesis Controllers.

#### Answer: B

Explanation:

For integrating a LINK cartridge that is certified for pipelines and controllers into a system using the Storefront Reference Architecture (SFRA), which primarily uses scripts instead of the older pipeline technology, the architect should update the job pipelines to work as custom job steps. This approach allows the existing LINK cartridge functionalities to be maintained while making them compatible with the SFRA framework. Custom job steps enable more flexibility and the ability to leverage the full capabilities of SFRA, ensuring that the jobs run correctly within the newer architecture.

#### NEW QUESTION # 49

.....

Exam4Free also has a Salesforce Practice Test engine that can be used to simulate the genuine Salesforce Certified B2C Commerce Architect (Arch-303) exam.
