

Pass Guaranteed Confluent - CCAAK - Confluent Certified Administrator for Apache Kafka–The Best Practice Test

2026 Latest VCE4Dumps CCAAK PDF Dumps and CCAAK Exam Engine Free Share: <https://drive.google.com/open?id=1m7LaQaTrEme7R4oZ5L4QzLmoPyn6V3f>

Our company VCE4Dumps has been putting emphasis on the development and improvement of our CCAAK test prep over ten year without archaic content at all. So we are bravely breaking the stereotype of similar content materials of the CCAAK Exam, but add what the exam truly tests into our CCAAK exam guide. So we have adamant attitude to offer help rather than perfunctory attitude. It will help you pass your CCAAK exam in shortest time.

Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Apache Kafka® Security: This section of the exam measures skills of a Site Reliability Engineer and focuses on securing Kafka environments. It includes authentication mechanisms such as TLS and SASL, authorization using ACLs, and encrypting data at rest and in transit to ensure secure communication and access control.
Topic 2	<ul style="list-style-type: none"> • Observability: This section of the exam measures skills of a Site Reliability Engineer and focuses on monitoring Kafka clusters. It assesses knowledge of metrics, logging, and alerting tools, including how to use them to maintain cluster health and performance visibility.
Topic 3	<ul style="list-style-type: none"> • Apache Kafka® Fundamentals: This section of the exam measures skills of a Kafka Administrator and covers core concepts such as Kafka architecture, components, and data flow. It assesses the candidate’s understanding of topics like topics and partitions, brokers, producers, consumers, and message retention.
Topic 4	<ul style="list-style-type: none"> • Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.

CCAAK Practice Test, Confluent Trustworthy CCAAK Source: Confluent Certified Administrator for Apache Kafka Pass for Sure

Our CCAAK real exam can be downloaded for free trial before purchase, which allows you to understand our CCAAK sample questions and software usage. It will also enable you to make a decision based on your own needs and will not regret. If you encounter any problems in the process of purchasing or using CCAAK Study Guide you can contact our customer service by e-mail or online at any time, we will provide you with professional help.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q12-Q17):

NEW QUESTION # 12

You have an existing topic t1 that you want to delete because there are no more producers writing to it or consumers reading from it. What is the recommended way to delete the topic?

- A. If topic deletion is enabled on the brokers, delete the topic using Kafka command line tools.
- B. The consumer should send a message with a 'null' key.
- C. Delete the log files and their corresponding index files from the leader broker.
- D. Delete the offsets for that topic from the consumer offsets topic.

Answer: A

Explanation:

The recommended and safe method to delete a topic is to use the Kafka CLI tool kafka-topics.sh --delete command, provided that delete.topic.enable=true is set on the brokers.

NEW QUESTION # 13

By default, what do Kafka broker network connections have?

- A. Encryption and authentication, but no authorization
- B. Encryption, but no authentication or authorization
- C. No encryption, no authorization, but have authentication
- D. No encryption, no authentication and no authorization

Answer: D

Explanation:

By default, Kafka brokers use the PLAINTEXT protocol for network communication. This means:

- * No encryption - data is sent in plain text.
 - * No authentication - any client can connect without verifying identity.
 - * No authorization - there are no access control checks by default.
- Security features like TLS, SASL, and ACLs must be explicitly configured.

NEW QUESTION # 14

Your Kafka cluster has four brokers. The topic t1 on the cluster has two partitions, and it has a replication factor of three. You create a Consumer Group with four consumers, which subscribes to t1.

In the scenario above, how many Controllers are in the Kafka cluster?

- A. two
- B. Four
- C. three
- D. One

Answer: D

Explanation:

In a Kafka cluster, only one broker acts as the Controller at any given time. The Controller is responsible for managing cluster metadata, such as partition leadership and broker status. Even if the cluster has multiple brokers (in this case, four), only one is

elected as the Controller, and others serve as regular brokers. If the current Controller fails, another broker is automatically elected to take its place.

NEW QUESTION # 15

If the Controller detects the failure of a broker that was the leader for some partitions, which actions will be taken? (Choose two.)

- A. The Controller sends the new leader and ISR list changes to all producers and consumers.
- B. The Controller persists the new leader and ISR list to ZooKeeper.
- C. The Controller sends the new leader and ISR list changes to all brokers.
- D. The Controller waits for a new leader to be nominated by ZooKeeper.

Answer: B,C

Explanation:

The Controller updates ZooKeeper with the new leader and in-sync replica (ISR) information to maintain metadata consistency. Brokers need this information to correctly route client requests and continue replication.

NEW QUESTION # 16

An employee in the reporting department needs assistance because their data feed is slowing down. You start by quickly checking the consumer lag for the clients on the data stream.

Which command will allow you to quickly check for lag on the consumers?

- A. bin/kafka-reassign-partitions.sh
- B. bin/kafka-consumer-lag.sh
- C. bin/kafka-consumer-groups.sh
- D. bin/kafka-consumer-group-throughput.sh

Answer: C

Explanation:

The kafka-consumer-groups.sh script is used to inspect consumer group details, including consumer lag, which indicates how far behind a consumer is from the latest data in the partition.

The typical usage is bin/kafka-consumer-groups.sh --bootstrap-server <broker> --describe --group <group_id>

NEW QUESTION # 17

.....

The price for Confluent CCAAK exam materials is reasonable, and no matter you are a student at school or an employee in the company, you can afford it. Besides, Confluent Certified Administrator for Apache Kafka CCAAK Exam Materials are compiled by skilled professionals, and they are familiar with the exam center, therefore the quality can be guaranteed.
