

# Upgrade NCP-DB-6.10 Dumps & NCP-DB-6.10 Passing Score Feedback

Download Valid Nutanix NCP-CN Exam Dumps for Best Preparation

1. A company is required by NIST to follow FIPS guidelines for compliance.

What is the first step for enabling FIPS in NKP?

- A. Run the command `export FIPS_ENABLED=true`
- B. Run the command `nkp cluster create <provisioner> <options> --fips`
- C. Follow the OS vendor's instructions to ensure that the OS or OS images are prepared for operating in FIPS mode.
- D. Click Enable in the NKP Kommander Web UI, Global Workspace -> Settings -> FIPS menu.

**Answer: C**

2. When deploying NKP using the Nutanix provisioning method (CAPX), what are the supported OS platforms?

- A. CentOS and Rocky Linux
- B. Rocky Linux and Ubuntu
- C. Flatcar, Rocky Linux, and Ubuntu
- D. CentOS and Ubuntu

**Answer: B**

3. Which CAPI provisioning method requires creating an inventory file of the servers to become NKP nodes?

- A. AWS (CAPA)
- B. Nutanix (CAPX)
- C. Pre-provisioned (CAPPP)
- D. vSphere (CAPV)

**Answer: C**

4. A company uses an Artifactory private registry for development. The NKP deployment must use this private registry since the Security Administrator has the firewall configured to reject connections to public container registries. The first task is to push the NKP bundle to this private registry.

What options should be used to push the NKP bundle to this private registry?

- A. `--registry-mirror-url`, `--registry-mirror-username` and `--registry-mirror-password`
- B. `--mirror-url`, `--mirror-username` and `--mirror-password`
- C. `--registry-url`, `--registry-username` and `--registry-password`
- D. `--to-registry`, `--to-registry-username` and `--to-registry-password`

**Answer: D**

5. A development Kubernetes cluster deployed with NKP is having performance issues. The Cloud Engineer commented that worker VMs are consuming a lot of CPU and RAM. The Platform Engineer took a look at the CPU and RAM statistics with Grafana and confirmed that the worker VMs are running out of CPU and memory. The Kubernetes cluster has 4 workers with 8 vCPUs and 32 GB RAM.

What could the Platform Engineer do?

- A. Call tech support to take a look at the infrastructure and investigate.
- B. Ask developers to lower the number of application replicas.
- C. Add more CPU and memory to workers with `nkp scale --cpu 16 --memory 64 --cluster-name ${CLUSTER_NAME}`

2 / 5

P.S. Free & New NCP-DB-6.10 dumps are available on Google Drive shared by Itexamguide: <https://drive.google.com/open?id=1VX4dNIRf5ip8y8teHbg3TDs#tKlcp4->

We have applied the latest technologies to the design of our Nutanix NCP-DB-6.10 test prep not only on the content but also on the displays. As a consequence you are able to keep pace with the changeable world and remain your advantages with our Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 NCP-DB-6.10 Training Materials.

With the help of Nutanix certification, you can excel in the field of and can get a marvelous job in a well-known firm. If you prepare with Itexamguide, then your success is guaranteed. We offer money back guarantee for our customers. The whole material of the Nutanix NCP-DB-6.10 dumps are related to the exam. It provides complete guidance how to prepare the exam. The NCP-DB-6.10 Exam Dumps are highly useful and practical. You can be sure of your success in the first attempt. The comprehensive material of dumps and NCP-DB-6.10 dumps are perfect for exam assistance.

## Take Your Exam Preparation to the Next Level with NCP-DB-6.10 Web-Based Practice Test

Do you feel aimless and helpless when the NCP-DB-6.10 exam is coming soon? If your answer is absolutely yes, then we would

like to suggest you to try our NCP-DB-6.10 training materials, which are high quality and efficiency test tools. Your success is 100% ensured to pass the NCP-DB-6.10 Exam and acquire the dreaming certification which will enable you to reach for more opportunities to higher incomes or better enterprises.

## Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q69-Q74):

### NEW QUESTION # 69

While restoring a PostgreSQL HA instance, an administrator notices that the restore of a standby node has failed. The primary node is ready to seive application traffic.

In what state does NDB leave the database?

- A. ONLINE
- B. PAKFIAL.READY
- C. RECOVERY PENDING
- D. OFFLINE

**Answer: A**

Explanation:

When restoring a PostgreSQL HA instance in NDB, if the standby node fails to restore but the primary node is successfully restored and ready to serve application traffic, NDB considers the database operational from the perspective of the primary node. In this scenario, NDB leaves the database in an "ONLINE" state, reflecting that the primary node is functional and capable of handling requests, even though the HA configuration is not fully intact due to the standby failure.

The administrator would need to address the standby node separately (e.g., by re-provisioning or troubleshooting), but the database's state is determined by the primary node's readiness.

### NEW QUESTION # 70

Refer to the exhibit. An administrator is attempting to take a manual snapshot of a database in ND8 on an AHV cluster. There are multiple Nutanix clusters in this environment and the administrator would like to replicate the snapshot to one of the remote clusters. When attempting to take the snapshot, only a single cluster appears, as shown in the exhibit.

What is the most likely reason that only a single cluster is shown?

- A. The snapshot will be too big to replicate to a remote cluster.
- B. The remote clusters are running ESXi.
- C. NDB Multi-cluster has not been enabled.
- D. The remote clusters have an older version of AOS installed.

**Answer: C**

Explanation:

The exhibit shows the "Create Snapshot" interface in NDB, where the administrator can select Nutanix clusters where the snapshot should be made available. However, only a single cluster appears despite multiple clusters in the environment. The most likely reason is that NDB Multi-cluster has not been enabled. Multi-cluster support in NDB requires explicit configuration to enable snapshot replication and data availability across remote clusters (e.g., via Prism Central and network profiles). Without this, NDB restricts snapshot operations to the local cluster where the database resides.

### NEW QUESTION # 71

What minimum account access level is required in Prism Element to deploy NDB?

- A. Backup Administrator
- B. User Administrator
- C. Viewer
- D. Cluster Administrator

**Answer: D**

Explanation:

To deploy Nutanix Database Service (NDB) in Prism Element, the minimum account access level required is Cluster Administrator.

This role provides the necessary permissions to manage cluster resources (e.g., storage, networking, and VMs) required for NDB deployment, including registering the cluster with NDB, configuring storage containers, and deploying NDB components. Lower roles like Viewer or Backup Administrator lack the scope to perform these tasks, and User Administrator is focused on user management, not deployment.

#### NEW QUESTION # 72

What is used to temporarily store the transaction logs of the source database before they are copied to the log?

- A. NDB Profiles
- B. NDB Drive
- C. Time Machine
- **D. Database Agent**

**Answer: D**

Explanation:

The Database Agent is used to temporarily store the transaction logs of the source database before they are copied to the log. This is a critical component for ensuring data consistency and recovery in database operations.

#### NEW QUESTION # 73

An administrator has deployed an NDB HA setup. An electrical maintenance window needs to be planned and the clusters where NDB is deployed must be powered off. After shutting down the load balancer server, what should the administrator do next?

- A. Run the high-availability list command.
- B. Shutdown the API leader node.
- **C. Shutdown the API standby node.**
- D. In the sudo systemctl stop patroni command.

**Answer: C**

Explanation:

In an NDB HA (High Availability) setup, when planning an electrical maintenance window requiring the clusters hosting NDB to be powered off, the administrator must follow a controlled shutdown sequence to preserve data integrity and minimize disruption. After shutting down the load balancer server (HAProxy), the next step is to shut down the API standby node. In an NDB HA configuration, the API leader node handles active operations, while the standby node provides redundancy. Shutting down the standby node first ensures the leader remains operational, allowing ongoing management tasks to continue until the final shutdown of the leader node.

#### NEW QUESTION # 74

.....

We can guarantee that our study materials will be suitable for all people and meet the demands of all people, including students, workers and housewives and so on. If you decide to buy and use the NCP-DB-6.10 study materials from our company with dedication and enthusiasm step by step, it will be very easy for you to pass the exam without doubt. We sincerely hope that you can achieve your dream in the near future by the NCP-DB-6.10 Study Materials of our company.
