Oracle GoldenGate 19c Implementation Professional Sample Questions (Q66-Q71):

NEW QUESTION # 66
You want to use multiple concurrent Extract process groups. What is the key factor in determining how many can be running at the same time?

- A. System memory
- B. The number of concurrent users
- C. The number of compound keys on the source tables
- D. Disk space

Answer: A

Explanation:
System memory is the most critical factor for determining how many Extract processes can run concurrently. Each process consumes memory, and insufficient memory may lead to performance degradation or process failure.

NEW QUESTION # 67
DDL can be used in conjunction with filter options. What would be the correct DDL parameter if you need DDL for specific objects?

- A. DDL Exclude All, Include ObjName <objectname>
- B. DDL <objectname>
- C. DDL Include All, Exclude ObjName <objectname>
- D. DDL Include. <objectname>

Answer: A

Explanation:
This configuration first excludes all DDL operations (EXCLUDE ALL) and then selectively includes DDL for specific objects using INCLUDE OBJNAME. This approach ensures that only the desired DDL operations are replicated, providing precise control over DDL replication.

NEW QUESTION # 68
You have configured and added the Extract and Replicat tasks by using the Direct Load method. What do you need to do to get the processes up and running?

- A. Start the Extract task
- B. Start the Extract task, wait for it to stop, and then start the Replicat task
- C. Start the Replicat task
- D. Start the Extract task and then start the Replicat task

Answer: B

Explanation:
In the Direct Load method, the Extract performs a one-time data load and then stops. Only after that should the Replicat be started to apply the loaded data. Starting both simultaneously is not valid for this method.

NEW QUESTION # 69
Source and target tables have the same column order, data types, and column sizes, yet different table and column naming. Which Replicat parameter will handle this mapping?

- A. COLMAP (TargetColumnName=SourceColumnName, ...)
- B. COLMAP (USEDEFAULTS)...
- C. ASSUMETARGETDEFS
- D. SOURCEDEFS

Answer: A

Explanation:
When source and target tables have the same column order, data types, and sizes, but different table or column names, you need to explicitly map columns using the COLMAP parameter in the Replicat parameter file.

NEW QUESTION # 70
Can ogggsa.sh utility configure only the Service Manager?

- A. No, it is used only for viewing logs
- B. No, it must also configure at least one deployment
- C. Yes, and also the AdminClient
- D. Yes, it configures only Service Manager

Answer: B

Explanation:

The utility sets up the Service Manager and at least one deployment to function properly.
