Latest 300-445 Study Plan | The Best Designing and Implementing Enterprise Network Assurance 100% Free Latest Dumps Book

DOWNLOAD the newest BraindumpsVCE 300-445 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1SUQppEr34NW4gi9eKbVWlSiiFOC28KK7

The best news is that during the whole year after purchasing our 300-445 study materials , you will get the latest version of our 300-445 exam prep for free, since as soon as we have compiled a new versions of the 300-445 learning quiz, our company will send the latest one of our 300-445 training engine to your email immediately. It will be quite fast and convenient to process and our systemw will auto inform you to free download as long as we update our exam dumps.

The Cisco 300-445 exam questions were developed by BraindumpsVCE in three formats. If you take enough practice tests on 300-445 practice exam software by BraindumpsVCE, you'll be more comfortable when you walk in on Cisco exam day. So, go with 300-445 Exam Questions that are prepared under the supervision of industry experts to expand your knowledge base and successfully pass the 300-445 exam on the first attempt.

100% Pass Quiz 2026 Cisco 300-445: Designing and Implementing Enterprise Network Assurance Authoritative Latest Study Plan

If you are still in colleges, it is a good chance to learn the knowledge of the 300-445 study engine because you have much time. At present, many office workers are keen on learning our 300-445 guide materials even if they are busy with their work. So you should never give up yourself as long as there has chances. In short, what you have learned on our 300-445 study engine will benefit your career development.

Cisco Designing and Implementing Enterprise Network Assurance Sample Questions (Q18-Q23):

NEW QUESTION # 18
How does the integration between Cisco technologies streamline network management tasks?

- A. Automates configuration workflows
- B. Limits software compatibility
- C. Increases hardware complexity
- D. Reduces scalability options

Answer: A

Explanation:
Integration of Cisco technologies automates configuration workflows, simplifying network management tasks and improving efficiency.

NEW QUESTION # 19

What is an important consideration when choosing a time period for collecting data to establish a baseline for interface utilization on a critical network link?

- A. Ensuring the time period aligns with the organization's financial year.
- B. Capturing both peak and off-peak traffic patterns for a representative view.
- C. Selecting the time period with the lowest network traffic volume.
- D. Limiting the time period to minimize the amount of data that needs to be analyzed.

Answer: B

Explanation:
Establishing an accurate baseline is a cornerstone of theDesigning and Implementing Enterprise Network Assurance (300-445 ENNA)methodology. A baseline must represent the "typical" behavior of the network across its standard operating cycle to be useful for anomaly detection and capacity planning. When monitoring interface utilization on a critical link, it is vital tocapture both peak and off-peak traffic patterns (Option C).
Most enterprise networks exhibit cyclical traffic patterns, often referred to as "diurnal" cycles, where utilization spikes during business hours (peak) and drops significantly at night or on weekends (off-peak). If an engineer only collects data during the lowest volume period (Option A), the baseline will be unrealistically low, leading to "false positive" alerts when normal business traffic returns. Conversely, only capturing peak data might hide background synchronization tasks or backup windows that occur during off-hours. By selecting a representative time period-typically one full week or a month-the engineer ensures the baseline accounts for variations such as Monday morning "logon storms," mid-week steady states, and weekend maintenance. This comprehensive view allows the assurance platform (such asCisco Catalyst CenterorThousandEyes) to calculate a standard deviation and establish dynamic thresholds. If utilization deviates from these historically representative norms, the system can trigger an alert based on a true anomaly rather than a predictable daily surge. Aligning with a financial year (Option B) is irrelevant to technical performance, and limiting the data (Option D) compromises the baseline's statistical validity.

NEW QUESTION # 20

A network engineer deploys a ThousandEyes Docker agent on a switch using app-hosting. The agent needs to communicate through a proxy server, but this configuration was missed during the initial deployment. The engineer adds the proxy settings to the app-hosting configuration. What is the next step to ensure the agent uses the proxy and appears online in the ThousandEyes portal?

- A. Restart the container using app-hosting stop appid agentname followed by app-hosting start appid agentname
- B. Reinstall the agent using the app-hosting install command with the correct proxy settings
- C. No action required; the agent will pick up the configuration automatically
- D. Execute the full agent lifecycle: app-hosting stop appid agentname, app-hosting deactivate appid agentname, app-hosting activate appid agentname, app-hosting start appid agentname

Answer: D

NEW QUESTION # 21

What role does synthetic testing play in network assurance?

- A. Simulating user interactions
- B. Analyzing server logs
- C. Identifying real-time traffic patterns
- D. Monitoring hardware health

Answer: A

Explanation:
Synthetic testing plays a crucial role in network assurance by simulating user interactions with applications, enabling proactive monitoring and performance optimization.

NEW QUESTION # 22

Refer to the exhibit.

An engineer must configure Cisco ThousandEyes SSO to use Microsoft Entra ID using the configuration shown in the exhibit. Which feature must be set to override to complete the configuration?

- A. Service Provider Issuer
- B. Identity Provider Issuer
- C. Logout Page URL
- D. Login Page URL

Answer: B

Explanation:

In theDesigning and Implementing Enterprise Network Assurance (300-445 ENNA)architecture, secure administrative access via Single Sign-On (SSO) is a critical component of platform governance. The exhibit illustrates the ThousandEyes SSO configuration panel being integrated withMicrosoft Entra ID(formerly Azure AD). When configuring SAML-based authentication, the "Identity Provider Issuer" (Option D) is a unique identifier provided by the IdP (Microsoft) that must match exactly between the two systems. According to ENNA implementation guidelines, ThousandEyes populates default fields based on standard SAML metadata. However, Microsoft Entra ID often utilizes a specific GUID-based format for the Issuer URL (e.g., https://sts.windows.net/tenant-id/) that may differ from the generic URL format expected by the platform's initial auto-fill. To ensure a successful SAML handshake, the engineer must select the"Override" checkbox next to theIdentity Provider Issuerfield. This action unlocks the field, allowing the engineer to manually paste the exact string provided in the Entra ID Federation Metadata document. If this value is not overridden and matched precisely, the SAML assertion will be rejected, resulting in a failed authentication attempt.

While the Login and Logout URLs (Options B and C) are also critical, they are typically correctly identified during the initial setup or metadata import; theIdentity Provider Issueris the most frequent point of mismatch requiring an manual override in Entra ID environments due to its strict "Audience Restriction" requirements. TheService Provider Issuer(Option A) is generally a fixed value (https://app.thousandeyes.

com) that rarely requires overriding as it defines ThousandEyes' own identity to the IdP.

Therefore, selecting the override for theIdentity Provider Issueris the necessary step to complete the integration and allow enterprise users to authenticate securely using their corporate credentials.
