MuleSoft-Integration-Associate合格資料 & MuleSoft-Integration-Associate合格受験記

ShikenPASSは開発に従属しています。そして、当社の専門家は、試験の知識を3つのバージョンで示す製品に一般化します。MuleSoft-Integration-Associate試験問題のPDFバージョン-顧客の印刷リクエストをサポートし、論文の印刷と練習ができます。MuleSoft-Integration-Associate学習ガイドのソフトウェアバージョン-シミュレーションテストシステムのサポート。このバージョンはWindowsシステムユーザーのみをサポートすることを忘れないでください。MuleSoft-Integration-Associateモッククイズのアプリ/オンラインバージョン-あらゆる種類の機器やデジタルデバイスに適しているため、履歴とパフォーマンスをより良く確認できます。

Salesforce Certified MuleSoft Integration Associate Exam 認定 MuleSoft-Integration-Associate 試験問題 (Q10-Q15):

質問 # 10

Which AnypointPlatform component should a MuleSoft developer use to create an API specification prior to building the API implementation?

- A. MUnit

- B. API Designer
- C. API Manager
- D. Runtime Manager

正解: B

解説:

Creating an API specification before building the API implementation is a critical step in API development.

MuleSoft's API Designer is the tool designed for this purpose. Here's a detailed explanation:

- * API Designer:
- * Purpose: API Designer is a web-based tool within Anypoint Platform that allows developers to design, document, and test APIs.
- * Features:
- * Specification Languages: Supports RAML and OAS (OpenAPI Specification) for defining APIs.
- * Interactive Editing: Provides a graphical and text-based interface to design API specifications interactively.
- * Mocking Service: Allows developers to create mock services to simulate API behavior before the actual implementation.
- * Process:
- * Define API: Use API Designer to create a detailed API specification, including endpoints, methods, request/response schemas, and security schemes.
- * Documentation: Automatically generate API documentation that can be shared with stakeholders.
- * Testing: Test the API design using the built-in mocking service to ensure it meets requirements.

References

- * MuleSoft Documentation: API Designer
- * API Design Best Practices: Designing APIs

質問 # 11

An organization needs to procure an enterprise software system to increase cross-selling opportunities and better track prospect data.

Which category of enterprise software has these core capabilities, when used for its typical and intended purpose?

- A. Customer Relationship Management (CRM)
- B. Business-to-Business (B2B)
- C. Supply Chain Management (SCM)
- D. IT Service Management (ITSM)

正解: A

解説:

Customer Relationship Management (CRM) systems are designed to manage an organization's interactions with current and potential customers. Here's a detailed explanation:

- * Core Capabilities:
- * Cross-Selling Opportunities: CRM systems track customer interactions, preferences, and purchasing history, helping businesses identify opportunities for cross-selling and upselling.
- * Prospect Data Management: CRM systems manage prospect information, track leads, and nurture relationships through the sales funnel.
- * Typical Use:
- * Sales Management: Helps sales teams manage and analyze customer interactions and data throughout the customer lifecycle.
- * Marketing Automation: Assists in automating marketing campaigns, segmenting customer lists, and tracking campaign effectiveness.
- * Customer Service: Provides tools for managing customer support cases, improving customer satisfaction, and retaining customers.

- * CRM Overview: What is CRM?
- * Benefits of CRM: Why CRM Matters

質問 # 12

An integration team follows MuleSoft's recommended approach to full lifecycle API development. Which activity should this team perform during the API implementation phase?

- A. Design the API specification
- B. Use the API specification to build the MuleSoft application

- C. Use the API specification to monitor the MuleSoft application
- D. Validate the API specification

正解: B

解説:

MuleSoft recommends a full lifecycle API development approach which includes several phases such as design, implementation, testing, deployment, and management. During the API implementation phase, the primary activity is to use the API specification to build the MuleSoft application. Here's a detailed explanation:

* API Design:

* Create API Specification: Initially, an API specification is created using RAML or OAS (OpenAPI Specification) to define the API's structure, endpoints, request/response formats, and security requirements.

* API Implementation:

* Build Mule Application: Using the API specification as a blueprint, the development team implements the MuleSoft application. This involves creating flows, integrating with backend systems, and ensuring the API functions as specified.

* APIKit: MuleSoft provides APIKit, a tool that automatically generates Mule flows based on the API specification, speeding up the development process.

* Testing: During implementation, unit tests (using MUnit) and integration tests are created to ensure the API behaves as expected.

* Validation and Monitoring:

* Validate Against Specification: Throughout the implementation phase, the API is continuously validated against the original specification to ensure compliance.

* Deployment and Monitoring: Post-implementation, the API is deployed, and tools like Anypoint Monitoring are used to monitor its performance and usage.

References

* MuleSoft Documentation: Full Lifecycle API Management

* APIKit: Building APIs with APIKit

質問 # 13

A key CI/CD capability of any enterprise solution is a testing framework to write and run repeatable tests Which component of Anypoint Platform provides the test automation capabilities for customers to use in their pipelines?

- **A. MUnit**
- B. Anypoint CLI
- C. Mule Maven Plugin
- D. Exchange Mocking Service

正解: A

解説:

A robust CI/CD pipeline requires automated testing to ensure code quality and functionality. MuleSoft's MUnit provides this capability for Mule applications. Here's a detailed explanation:

* MUnit:

* Purpose: MUnit is MuleSoft's testing framework for creating automated tests for Mule applications.

* Capabilities:

* Unit Tests: Write unit tests to validate the behavior of individual components and flows.

* Integration Tests: Test interactions between multiple components and external systems.

* CI/CD Integration:

* Automation: Integrate MUnit tests into CI/CD pipelines using tools like Jenkins, GitLab CI, or Bamboo.

* Repeatable Tests: Ensures that tests are executed consistently with each code change, catching issues early in the development process.

* Pipeline Execution:

* Build and Test: The pipeline automatically runs MUnit tests during the build process, providing immediate feedback on the code changes.

* Quality Assurance: Helps maintain high code quality and reduces the risk of defects in production.

References

* MuleSoft Documentation: MUnit

* CI/CD Best Practices: MuleSoft CI/CD

質問 # 14

According to MuleSoft what is a major distinguishing characteristic of an application network in relation to the integration of systems, data, and devices?

- A. It leverages well-accepted internet standards like HTTP and JSON
- B. It uses CI/CD automation for real-time project delivery
- C. It uses a well-organized monolithic approach with standards
- **D. It is built for change and self-service**

正解: D

解説:

An application network, as envisioned by MuleSoft, is designed to be dynamic and self-service, enabling rapid adaptation to changing business needs. Here's a detailed explanation:

* Built for Change:

* Flexibility: An application network allows for the easy addition, modification, and removal of services without disrupting existing functionalities.

* Modular Architecture: Promotes a modular approach where services and APIs can be independently developed, deployed, and managed.

* Self-Service:

* Empowerment: Enables different teams (e.g., developers, business units) to access and use APIs and services without heavy reliance on central IT.

* API-led Connectivity: Facilitates a self-service model where reusable APIs are available for various teams to integrate and build upon, accelerating innovation and reducing time-to-market.

* Characteristics:

* Decentralization: Unlike monolithic architectures, an application network supports decentralized development and deployment.

* Reusability and Discoverability: Services and APIs are designed to be easily discoverable and reusable across different parts of the organization.
