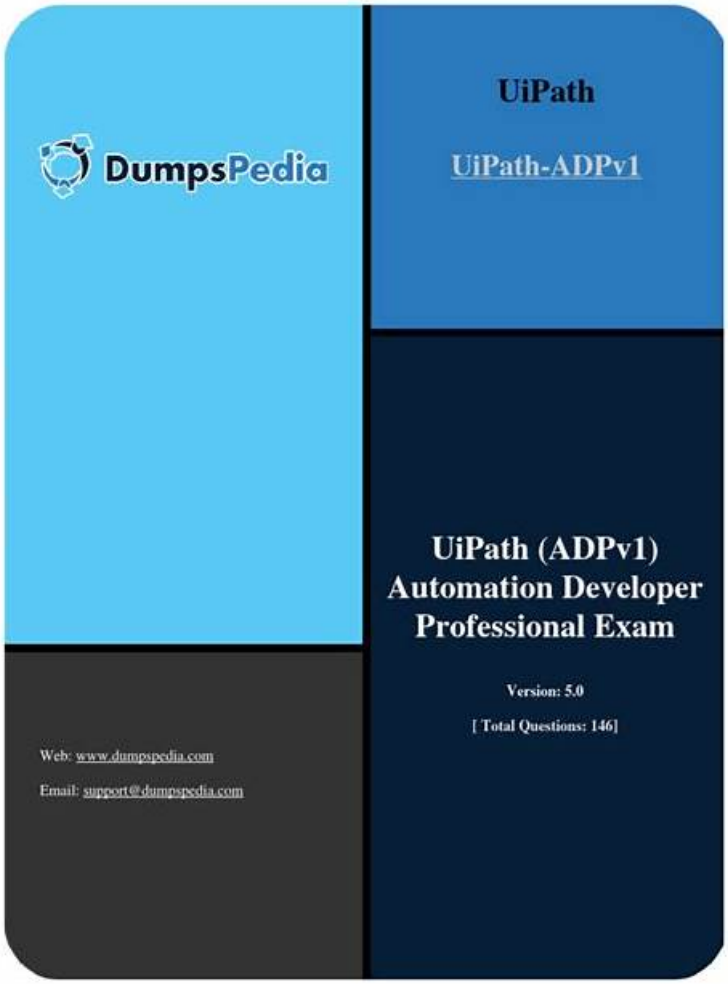
UiPath-ADPv1 Pdf Files & UiPath-ADPv1 Valid Test Testking



P.S. Free 2026 UiPath UiPath-ADPv1 dumps are available on Google Drive shared by Pass4Test: https://drive.google.com/open?id=1hW3watWJ_UZZGQ7JaM5tXT3ly78CQhLc

The Pass4Test wants to win the trust of UiPath (ADPv1) Automation Developer Professional (UiPath-ADPv1) certification exam candidates. To achieve this objective Pass4Test is presenting Valid, Real, and Updated UiPath (ADPv1) Automation Developer Professional (UiPath-ADPv1) exam questions in three different formats. These formats have high demand in the market and offer the easiest and quick way for UiPath (ADPv1) Automation Developer Professional (UiPath-ADPv1) exam preparation.

UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	• Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.
Topic 2	• UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.
Topic 3	• UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.

Topic 4	• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.

UiPath-ADPv1 Valid Test Testking & UiPath-ADPv1 Reliable Braindumps Ppt

The Pass4Test is committed from the day first to ace the UiPath (ADPv1) Automation Developer Professional (UiPath-ADPv1) exam questions preparation at any cost. To achieve this objective Pass4Test has hired a team of experienced and qualified UiPath UiPath-ADPv1 certification exam experts. They utilize all their expertise to offer top-notch UiPath (ADPv1) Automation Developer Professional (UiPath-ADPv1) exam dumps. These UiPath-ADPv1 exam questions are being offered in three different but easy-to-use formats.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q62-Q67):

NEW QUESTION # 62
A developer wants to add items to a list of strings using the Invoke Method activity. The list is declared as follows:
The Invoke Method activity has the following properties:
The Parameters property is as follows:
Based on the information shown in the exhibits what is the outcome of the Invoke Method activity?

- A. Colors will contain an item with an empty value.
- B. An exception will be thrown.
- C. Colors will contain an item with the value "Yellow".
- D. Colors will contain an item with the value "Colors: Yellow".

Answer: C

NEW QUESTION # 63
A developer configured the properties for a Click activity on an element inside a web page as shown in the following exhibit.
An animation on the web page never completely loads but the element indicated in the Click activity does load within the specified timeout duration. What occurs when this Click activity executes?

- A. Timeout error occurs without clicking on the element.
- B. Waits 10 seconds before clicking on the element.
- C. Continues to the next activity after 30 seconds without clicking on the element.
- D. Element is clicked once the element is fully loaded.

Answer: D

Explanation:
Click activity has the following properties:
*ClickType: Single
*MouseButton: Left
*Target.Timeout: 30000 ms (30 seconds)
*Target.WaitForReady: Interactive
The Target.Timeout property specifies the amount of time (in milliseconds) to wait for the activity to run before the SelectorNotFoundException error is thrown1. The default value is 30000 milliseconds (30 seconds)2.
The Target.WaitForReady property determines how long the activity should wait for the target UI element to be ready before performing the action1. The following options are available:
*None: Does not wait for anything except the target UI element to exist before executing the action1.
*Interactive: Waits until only a part of the app is loaded1.
*Complete: Waits for the entire app to be loaded1.

The default value is Interactive2, which means that the activity will wait until the UI element is visible and can be interacted with3. Therefore, based on these properties, the Click activity will wait for the element indicated by the selector to be loaded and clickable within 30 seconds. If the element is loaded before the timeout, the activity will click it and continue to the next activity. If the element is not loaded within the timeout, the activity will throw an error and stop the execution. The animation on the web page does not affect the Click activity, as long as the target element is loaded and visible. Hence, the correct answer is A. Element is clicked once the element is fully loaded.

NEW QUESTION # 64
Consider testing a workflow that computes the sum of two numbers having the data driven test data from the Excel file below:
Expanding the functionality of the workflow to compute the sum of three numbers, the data needs to be updated as well to accommodate the new scenario:
What are steps to do that?

- A. Click Right on the Test Case and select Refresh Test Data
- B. Click Right on the Test Case and select Remove Test Data.
- C. Click Right on the Test Case and select Update Test Data
- D. Click Right on the Test Case and select Add Test Data.

Answer: A

NEW QUESTION # 65
The following table is stored in a variable called "dt".
Which query can be used to extract the table column names and store them in a list?

- A. dt.Columns.Cast(Of Datacolumn).Select(function(x) x.ColumnName).ToList()
- B. dt.Columns.Cast(Of Datacolumn).Select(function(col) col).ToList()
- C. dt.AsEnumerable.Select(function(x) x.ColumnName).ToList()
- D. dt.Columns.Select(function(x) x.ColumnName).ToList()

Answer: A

Explanation:
The DataTable object in UiPath is a representation of a table with rows and columns that can store data of various types. It has a Columns property that returns a collection of DataColumn objects that describe the schema of the table1. To extract the column names from a DataTable and store them in a list, you can use the following query:
dt.Columns.Cast(Of Datacolumn).Select(function(x) x.ColumnName).ToList() This query does the following:
It casts the Columns collection to a generic IEnumerable(Of DataColumn) using the Cast(Of T) extension method2. This is necessary because the Columns collection is a non-generic IEnumerable that cannot be used with LINQ methods directly3.
It selects the ColumnName property of each DataColumn object using the Select extension method and a lambda expression4. The ColumnName property returns the name of the column as a string5.
It converts the resulting IEnumerable(Of String) to a List(Of String) using the ToList extension method6.
The other options are incorrect because:
Option B does not cast the Columns collection to a generic IEnumerable(Of DataColumn), which will cause a runtime error.
Option C uses the AsEnumerable extension method, which returns a collection of DataRow objects, not DataColumn objects7. Therefore, the ColumnName property will not be available.
Option D selects the whole DataColumn object instead of its ColumnName property, which will result in a list of DataColumn objects, not strings.

NEW QUESTION # 66

The following table is stored in a variable called "dt".
What will the value of the qty variable be after executing the Assign activity?

- A. 0
- B. 1
- C. 2
- D. null

Answer: A

Explanation:
The value of the qty variable will be 80 after executing the Assign activity. This is because the expression in the Assign activity is using the LINQ methods AsEnumerable, SkipWhile, and Item to access the data in the dt variable. The dt variable is a DataTable that contains the following data:
Item
Quantity
apple
5
banana
10
mango
20
orange
80
grape
40
The AsEnumerable method converts the DataTable into an Enumerable collection of DataRow objects. The SkipWhile method skips the elements of the collection until the condition is false. The condition is a lambda expression that checks if the value of the Item column is equal to "mango". The (0) indexer returns the first element of the collection after skipping. The Item method accesses the value of the Quantity column of the DataRow. The ToString method converts the value into a string. Therefore, the expression will skip the first three rows of the DataTable and return the value of the Quantity column of the fourth row, which is 80. NEW QUESTION # 67
.....

The UiPath UiPath-ADPv1 PDF dumps file is the most convenient way to prepare for the examination. This document is a collection of most probable and realistic UiPath (ADPv1) Automation Developer Professional UiPath-ADPv1 dumps. With this PDF file, you have UiPath (ADPv1) Automation Developer Professional UiPath-ADPv1 questions that will appear in the real exam. You can immediately download our UiPath-ADPv1 PDF Questions from the Pass4Test website after payment. Without place and time limits, you can use the PDF format of UiPath (ADPv1) Automation Developer Professional UiPath-ADPv1 real exam questions via smartphones, tablets, and laptops.
