NEW QUESTION # 66

A company has a requirement that all production applications must have a maximum tolerable downtime (MTD) of one hour per month.

Which statement would be included in the conceptual design to support this requirement?

- A. vSphere Fault Tolerance (FT) will not be enabled for the production applications.
- B. vSphere HA Host Failure Response will be set to Restart VMs.
- **C. Server hardware has been allocated for the production applications.**
- D. Production applications will run in a dedicated Tier 2 cluster.

Answer: C

Explanation:

To meet the requirement of maximum tolerable downtime (MTD) of one hour per month, the system must ensure that in the event of a host failure, the production applications (virtual machines) are restarted as quickly as possible. Configuring vSphere HA Host Failure Response to Restart VMs ensures that VMs are automatically restarted on available hosts in the cluster if a host failure occurs. This setup minimizes downtime and ensures that the system can recover within the specified MTD of one hour per month.
