## Oracle Cloud Infrastructure 2025 AI Foundations Associate Sample Questions (Q34-Q39):

### NEW QUESTION # 34

What is a key advantage of using dedicated AI clusters in the OCI Generative AI service?

- A. They provide high performance compute resources for fine-tuning tasks.
- B. They provide faster internet connection speeds.
- C. They allow access to unlimited database resources.
- D. They are free of charge for all users.

**Answer: A**

Explanation:

The primary advantage of using dedicated AI clusters in the Oracle Cloud Infrastructure (OCI) Generative AI service is the provision of high-performance compute resources that are specifically optimized for fine-tuning tasks. Fine-tuning is a critical step in the process of adapting pre-trained models to specific tasks, and it requires significant computational power. Dedicated AI clusters in OCI are designed to deliver the necessary performance and scalability to handle the intense workloads associated with fine-tuning large language models (LLMs) and other AI models, ensuring faster processing and more efficient training.

### NEW QUESTION # 35

Which is NOT a capability of OCI Vision's image analysis?

- A. Locating and extracting text in images
- B. Translating text in images to another language
- C. Object detection with bounding boxes
- D. Assigning classification labels to images

**Answer: B**

Explanation:

OCI Vision's image analysis capabilities include locating and extracting text from images, assigning classification labels to images, and detecting objects with bounding boxes. However, translating text in images to another language is not a capability of OCI Vision's image analysis. This functionality typically requires an additional layer of processing, such as integration with a language translation service, which is beyond the scope of OCI Vision's core image analysis features.

### NEW QUESTION # 36

What can Oracle Cloud Infrastructure Document Understanding NOT do?

- A. Extract tables from documents
- **B. Generate transcript from documents**
- C. Extract text from documents
- D. Classify documents into different types

**Answer: B**

Explanation:

Oracle Cloud Infrastructure (OCI) Document Understanding service offers several capabilities, including extracting tables, classifying documents, and extracting text. However, it does not generate transcripts from documents. Transcription typically refers to converting spoken language into written text, which is a function associated with speech-to-text services, not document understanding services. Therefore, generating a transcript is outside the scope of what OCI Document Understanding is designed to do .

#### NEW QUESTION # 37

What are Convolutional Neural Networks (CNNs) primarily used for?

- **A. Image classification**
- B. Image generation
- C. Text processing
- D. Time series prediction

**Answer: A**

Explanation:

Convolutional Neural Networks (CNNs) are primarily used for image classification and other tasks involving spatial data. CNNs are particularly effective at recognizing patterns in images due to their ability to detect features such as edges, textures, and shapes across multiple layers of convolutional filters. This makes them the model of choice for tasks such as object recognition, image segmentation, and facial recognition.

CNNs are also used in other domains like video analysis and medical image processing, but their primary application remains in image classification.

#### NEW QUESTION # 38

What is the primary purpose of reinforcement learning?

- **A. Learning from outcomes to make decisions**
- B. Finding relationships within data sets
- C. Making predictions from labeled data
- D. Identifying patterns in data

**Answer: A**

Explanation:

Reinforcement learning (RL) is a type of machine learning where an agent learns to make decisions by taking actions in an environment to achieve a certain goal. The agent receives feedback in the form of rewards or penalties based on the outcomes of its actions, which it uses to learn and improve its decision-making over time. The primary purpose of reinforcement learning is to enable the agent to learn optimal strategies by interacting with its environment, thereby maximizing cumulative rewards. This approach is commonly used in areas such as robotics, game playing, and autonomous systems.
