NEW QUESTION # 79

What is the default Distribution mode?

- A. User
- B. Network
- C. Manual-General
- D. Auto-topology

Answer: D

Explanation:

Auto-topology is the default distribution mode for Maestro Security Groups. In this mode, the Orchestrator assigns packets to a Security Group Member based on the topology of the port defined in the gateway object.

Each port is either in user mode or network mode depending on the topology. User mode means that the port is connected to the internal network and network mode means that the port is connected to the external network. The Orchestrator uses a hash function to map each source IP or destination IP to a specific SGM, depending on the mode of the port. This mode ensures that all packets with the same source IP or destination IP are processed by the same SGM, regardless of the port or protocol.

NEW QUESTION # 80

What is the purpose of Management ports located on the Rear Panel of the Orchestrator MHO-140?

- A. Out-of-band interfaces for access to Orchestrator itself
- B. Reserved for internal purposes. Not in use.
- C. 1Gbps connectivity for Security Groups
- D. Additional ports used as uplinks

Answer: A

Explanation:

The Management ports located on the Rear Panel of the Orchestrator MHO-140 are out-of-band interfaces that provide access to the Orchestrator itself for configuration and management purposes. They are not used for traffic distribution or connectivity to the Security Groups or the external networks. They are 1Gbps RJ-45 ports that can be connected to a switch or a router.

NEW QUESTION # 81

What cannot be learned from the output of asg monitor command?

- A. Uptime
- **B. Appliances cluster status**
- C. Security Policy status
- D. Port status

Answer: B

NEW QUESTION # 82

What is one benefit of a Dual MHO environment?

- A. Dual MHOs provide redundancy to the Maestro environment by increasing throughput by at least 50 percent.
- **B. Dual MHOs can be used to achieve increased scalability and redundancy.**
- C. Dual MHOs allow additional SGMs to be added to the SG.
- D. Dual MHOs allow better synchronization to occur between SGMs.

Answer: B

Explanation:

Explanation

One of the benefits of a Dual MHO environment is that it can provide both scalability and redundancy to the Maestro system. Scalability means that the system can handle more traffic and SGMs as the demand grows, and redundancy means that the system can survive the failure of one or more components without losing functionality or performance. Dual MHOs can achieve these benefits by distributing the load and the management tasks among two orchestrators, and by providing backup and failover mechanisms for each other.
