Complete Valid OGEA-101 Test Registration & Leader in Qualification Exams & The Best OGEA-101: TOGAF Enterprise Architecture Part 1 Exam

At the Exam4Tests, we guarantee that our customers will receive the best possible TOGAF Enterprise Architecture Part 1 Exam (OGEA-101) study material to pass the The Open Group OGEA-101 certification exam with confidence. Joining this site for the OGEA-101 Exam Preparation would be the greatest solution to the problem of outdated material.

Passing the OGEA-101 exam in the shortest time is the voice of all the examinees. But how to select the most valuable information in overwhelming learning materials is a headache thing for all examiners. After our unremitting efforts, our OGEA-101 learning guide comes in everybody's expectation. Our professional experts not only have simplified the content and grasp the key points for our customers, but also recompiled the OGEA-101 Preparation materials into simple language, you will get a leisure study experience as well as a doomed success on your coming OGEA-101 exam.

Free PDF 2026 The Open Group OGEA-101: The Best Valid TOGAF Enterprise Architecture Part 1 Exam Test Registration

If you study with our OGEA-101 exam questions, then you will be surprised to find that our OGEA-101 training material is well-written and excellently-organised. That is because our experts fully considered the differences in learning methods and OGEA-101 examination models between different majors and eventually formed a complete review system. It will help you to Pass OGEA-101 Exam successfully after a series of exercises, correction of errors, and self-improvement. Our OGEA-101 exam questions contain everything you need to pass the exam.

The Open Group OGEA-101 Exam Syllabus Topics:

Topic	Details
Topic 1	• ADM Phase Requirements: This topic of the TOGAF Enterprise Architecture Part 1 exam focuses on the specific requirements for each ADM phase, including stakeholder identification and architecture scope definition. It measures the ability of aspiring TOGAF Practitioner to apply these requirements in real-world scenarios.

Topic 2	• Implementation Governance: This topic of The Open Group OGEA-101 exam emphasizes the governance framework for architecture implementation, including compliance processes. It measures the understanding of TOGAF practitioners about governance principles, a key competency for the OGEA-101 exam.
Topic 3	• Information Systems Architecture: Focusing on data and application architectures, this topic of the OGEA-101 exam assesses ability of TOGAF practitioners to define and manage information systems. It measures their skills in identifying data entities and application components.
Topic 4	• Introduction to the Architecture Development Method (ADM): The ADM is central to TOGAF, outlining a structured approach to developing and managing enterprise architecture. This section assesses comprehension of TOGAF practitioners about the ADM phases and their application, ensuring they grasp the method's iterative nature, which is vital for the OGEA-101 Exam.
Topic 5	• Fundamental Concepts of Enterprise Architecture: This topic covers the definition, purpose, and benefits of enterprise architecture, emphasizing its role in aligning business objectives with IT strategies. It measures the understanding of TOGAF practitioners about foundational principles essential for effective enterprise architecture practice, crucial for passing the OGEA-101 exam.
Topic 6	• Architecture Governance: This topic of The Open Group OGEA-101 exam covers the governance framework and responsibilities of architecture boards. It evaluates the skills of TOGAF practitioners in establishing governance structures.
Topic 7	• Architecture Vision: Aspiring TOGAF practitioners learn to develop an architecture vision that aligns with business goals and drivers. This topic evaluates the skills in articulating a clear and compelling vision, a necessary competency for successfully navigating the OGEA-101 exam and implementing enterprise architecture.
Topic 8	• Architecture Change Management: Focusing on managing architecture changes, this topic of the TOGAF Enterprise Architecture Part 1 exam assesses skills of practitioners in handling change requests and maintaining architecture repositories.

The Open Group TOGAF Enterprise Architecture Part 1 Exam Sample Questions (Q113-Q118):

NEW QUESTION # 113
What can be introduced to formalize a joint agreement between development partners and sponsors on the deliverables, quality, and fitness-for-purpose of an architecture?

- A. Non-disclosure Agreement
- B. Service Level Agreements
- C. Architecture Contracts
- D. The Statement of Architecture Work

Answer: C

Explanation:
Comprehensive and Detailed Explanation
In TOGAF, Architecture Contracts are agreements between development partners and sponsors that define:
* The deliverables to be produced.
* The quality expectations.
* The fitness-for-purpose of the architecture.
* The responsibilities of each party and the governance arrangements.
Architecture Contracts are a key part of Phase G: Implementation Governance, where they are used to manage and control architecture implementation. They help ensure that implementation projects remain aligned with the approved Target Architecture and business objectives.
They serve as the formal mechanism for:
* Validating that architecture deliverables meet stakeholder expectations.
* Providing a measurable basis for conformance assessment.

* Supporting architecture governance by linking architectural intent with project execution.
Why the other options are incorrect
* B. The Statement of Architecture Work: This defines the scope, approach, resources, and schedule for architecture work, but it is not a joint agreement on deliverables and fitness-for-purpose.
* C. Service Level Agreements (SLAs): These are agreements about operational service levels (e.g., availability, performance), not architecture deliverables.
* D. Non-disclosure Agreement (NDA): This protects confidentiality of information but does not address deliverables, quality, or fitness-for-purpose of an architecture.

* The Open Group, TOGAF Standard, Version 9.2, Part II: ADM - Phase G: Implementation Governance, Architecture Contracts.
* The Open Group, TOGAF 9 Certified Study Guide - explanation of Architecture Contracts as a governance tool.

NEW QUESTION # 114
Consider the description.
The typical contents of the assessment include: an overview of project progress and status and project architecture/design.
Which form of assessment is described?

- A. Organizational
- B. Capability
- C. Risk
- D. Compliance

Answer: D

Explanation:
Within the TOGAF framework, assessments are used to ensure that architecture work is conformant with governance parameters. A compliance assessment (sometimes called architecture compliance or compliance review) is the evaluation of a project's architectural artifacts-its design, architecture decisions, progress status-against the established architecture standards, principles, and constraints. The content of a compliance assessment typically includes reviewing the project status, the architectural design alignment, and identifying non#compliance issues or deviations. Because it focuses on how well the project matches the architecture, rather than on capabilities, organizational structure, or risk per se, the described contents correspond to a compliance assessment. The compliance assessment helps governance bodies enforce architectural consistency and correct deviations during implementation.

NEW QUESTION # 115
Consider the following statement:
According to the TOGAF Standard a governed approach of a particular deliverable will ensure a system of continuous monitoring to check integrity changes decision-making and audit of all architecture-related activities Which deliverable is being referred to?

- A. The Architecture Definition Document
- B. An Architecture Contract
- C. The Architecture Vision
- D. The Statement of Architecture Work

Answer: B

NEW QUESTION # 116
Complete the following sentence:
Presenting different_____and_____to stakeholders helps architects to extract hidden agendas principles and requirements that could impact the final Target Architecture

- A. Architecture Views Architecture Viewpoints
- B. Alternatives Trade-offs
- C. Solutions Applications
- D. Business Scenarios Business Models

Answer: A

Explanation:

According to the TOGAF Standard, an architecture view is a representation of a system from the perspective of a related set of concerns1. An architecture viewpoint is a specification of the conventions for a particular kind of architecture view1. Presenting different architecture views and architecture viewpoints to stakeholders helps architects to extract hidden agendas, principles, and requirements that could impact the final target architecture. This is because different stakeholders may have different concerns and interests in the system, and by showing them how the system addresses their concerns from different perspectives, the architects can elicit more feedback and validation from them2. For example, a business stakeholder may be interested in the business architecture view, which focuses on the business processes, functions, and capabilities of the system3. A security stakeholder may be interested in the enterprise security view, which addresses the security aspects of the system, such as confidentiality, integrity, and availability3. By presenting these views to the respective stakeholders, the architects can ensure that the system meets their expectations and needs, and also identify any potential issues or gaps that may affect the target architecture. NEW QUESTION # 117

What is used to structure architectural information in an orderly way so that it can be processed to meet stakeholder needs?

- A. An Architecture Framework
- B. An EA Library
- C. A Stakeholder Map
- D. Content Metamodel

Answer: D

Explanation:
* A content metamodel is a formal structure that defines the types of entities and relationships that are used to capture, store, filter, query, and represent architectural information in a way that supports consistency, completeness, and traceability12.
* A stakeholder map is a tool that identifies and analyzes the key stakeholders and their interests, influence, and expectations in relation to the architecture3. It is not used to structure architectural information, but rather to understand the stakeholder needs and concerns.
* An architecture framework is a set of principles, guidelines, standards, and tools that provide a common structure and methodology for developing architectures4. It is not used to structure architectural information, but rather to guide the architecture development process and ensure alignment with the business strategy and objectives.
* An EA library is a repository that stores and manages the architecture artifacts, deliverables, and other relevant information produced and consumed during the architecture development and governance. It is not used to structure architectural information, but rather to provide access, security, and version control for the architecture content.
