

100% Pass 2026 Oracle High Pass-Rate 1Z0-1042-25 Latest Mock Exam

P.S. Free 2025 Oracle 1Z0-1042-25 dumps are available on Google Drive shared by TorrentExam: https://drive.google.com/open?id=1Zlq_z21VC5mzPPlcq39qjshrJsrlbde

Usually, the questions of the real exam are almost the same with our 1Z0-1042-25 exam questions. So you just need to memorize our correct questions and answers of the 1Z0-1042-25 study materials. You absolutely can pass the exam. Also, we will offer good service to add you choose the most suitable 1Z0-1042-25 Practice Braindumps since we have three different versions of every exam product. And you can free download the demos of the 1Z0-1042-25 learning quiz.

Oracle 1Z0-1042-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Using OIC Connections & Adapters: This section evaluates the expertise of Integration Developers and Solution Architects in creating and configuring OIC connections. It includes setting up trigger and invoke connections, understanding the role of the Connectivity Agent, and effectively using adapters to connect cloud and on-premises applications seamlessly.
Topic 2	<ul style="list-style-type: none">Creating Orchestrated Integrations: This section tests the knowledge of Orchestration Developers and Business Process Analysts in managing orchestrated integrations within OIC. It includes using lookups, data mappers, and custom JavaScript libraries, configuring orchestration flow actions, implementing file handling options, and leveraging the fault-handling framework to manage errors effectively.
Topic 3	<ul style="list-style-type: none">Creating Scheduled Integrations: This domain measures the skills of Automation Engineers and Cloud Administrators in defining integration schedules and converting scheduled integrations to app-driven ones. It also includes using scheduled parameters to automate workflows efficiently.

Topic 4	<ul style="list-style-type: none"> Getting Started with OIC Integrations: This section of the exam measures the skills of Integration Specialists and Cloud Engineers in understanding the foundational components of Oracle Integration Cloud (OIC). It covers key integration concepts, how integrations work, and web services fundamentals such as WSDL, SOAP, REST, and JSON. The focus is on building a strong understanding of OIC's integration capabilities.
Topic 5	<ul style="list-style-type: none"> Testing, Monitoring, and Troubleshooting Integrations: This section assesses the abilities of Support Engineers and Integration Administrators in managing integration lifecycles. It includes activating and deactivating integrations, testing REST-triggered integrations, importing and exporting integrations, as well as monitoring and troubleshooting integration instances to ensure smooth operations.

Valid 1Z0-1042-25 Latest Mock Exam | 100% Free New 1Z0-1042-25 Test Papers

1Z0-1042-25 exam and they all got help from real and updated Oracle 1Z0-1042-25 exam questions. You can also be the next successful candidate for the 1Z0-1042-25 certification exam. No doubt the Oracle 1Z0-1042-25 Certification Exam is one of the most difficult Oracle certification exams in the modern Oracle world. This 1Z0-1042-25 exam always gives a tough time to their candidates.

Oracle Cloud Infrastructure 2025 Application Integration Professional Sample Questions (Q91-Q96):

NEW QUESTION # 91

You are an Oracle Integration Cloud (OIC) specialist responsible for integrating two enterprise applications.

Recently, you noticed that your integration instance is processing messages much slower than expected, causing a significant delay in data synchronization between the applications. What is the best course of action?

- A. Reactivate the integration to clear any temporary issues that might be causing the slowdown.
- **B. Analyze the performance metrics of the instance, identify bottlenecks, and optimize the integration accordingly.**
- C. Delete and re-create the integration to start with a clean slate.
- D. Immediately increase the number of instances to handle the increased load.

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

Performance issues require systematic resolution:

Option B: Analyzing metrics (via Monitoring > Instances or Dashboards) identifies bottlenecks (e.g., slow external calls, large payloads), enabling targeted optimization (e.g., batching, caching). This is the best practice.

Option A: Deleting and recreating loses history and is inefficient without diagnosis.

Option C: Reactivation might reset transient issues but doesn't address root causes.

Option D: Scaling instances increases cost without guaranteeing resolution if the bottleneck is elsewhere.

Data-driven optimization ensures effective synchronization.

NEW QUESTION # 92

A company has been using Oracle Integration (OIC) to integrate its business applications, such as Oracle HCM Cloud, Oracle ERP Cloud, and Salesforce. However, they are planning to migrate all integration workloads from their current OIC instance to a new instance in a different region to comply with data sovereignty regulations. Which task is NOT required when you need to clone archives of design-time metadata to export and import between Oracle Integration instances?

- A. Create a dynamic group.
- B. Create export and import jobs.
- **C. Enable public visibility for the Object Storage bucket.**
- D. Construct the storage URL for an Object Storage bucket.

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

Migrating OIC integrations across instances for data sovereignty involves exporting and importing design- time metadata (e.g., integrations, connections) using Oracle Cloud Infrastructure (OCI) Object Storage. Let's dissect each task with exhaustive detail:

Option A: Enable public visibility for the Object Storage bucket.

Not Required (Answer):Public visibility is unnecessary and insecure for this process. OIC export/import jobs use pre-authenticated requests or IAM policies to access a private bucket, ensuring data security. Making the bucket public exposes sensitive integration artifacts (e.g., connection details) to unauthorized access, violating sovereignty and security best practices. For example, a bucket storing HR integration metadata should remain private, accessible only via OIC credentials.

Option B: Create a dynamic group.

Required:A dynamic group in OCI groups OIC instances, allowing them to access resources like Object Storage via IAM policies.

For instance, you'd define a rule like ALL {instance.compartment.id = 'ocid1.

compartment...'} to include your OIC instances, granting them bucket access without static credentials. This is a foundational step for secure automation.

Option C: Create export and import jobs.

Required:In the OIC console, you explicitly create export jobs to generate archive files (IAR/PAR) and import jobs to ingest them into the target instance. For example, exporting an "HCM-to-Salesforce" package creates a PAR file, which the import job then processes in the new region. This is the core mechanism of migration.

Option D: Construct the storage URL for an Object Storage bucket.

Required:The OIC export/import process needs the bucket's URL (e.g., <https://objectstorage.us-ashburn-1.>

oraclecloud.com/n/namespace/b/bucket/o/) to locate and store/retrieve archives. You construct this in the OCI console or via CLI, ensuring OIC knows where to read/write files.

Why A is the answer:Public visibility isn't part of the standard workflow and contradicts security principles, especially for regulated data. Private access via IAM and pre-authenticated URLs suffices.

Edge Case:If a third-party tool needed public access (unlikely), it'd still be a non-standard, risky workaround.

Use Case Example:Migrating a private bucket of integrations from US to EU region uses B, C, D, but not A.

NEW QUESTION # 93

You are assigned to review the specifications of the SOA composite applications that have been deployed to your SOA Cloud Service instance. Part of this analysis requires you to catalog the Service Component Architecture (SCA) components that are implemented within each composite application.

Which is a valid SCA component in an Oracle SOA composite application?

- A. MFT Adapter
- B. BAM Adapter
- **C. Mediator**
- D. B2B Agreement

Answer: C

Explanation:

A Mediator is a valid SCA component in an Oracle SOA composite application. Mediators are used for routing messages, transforming data, and implementing business logic within the integration flow. They provide flexibility in manipulating messages before they reach their destination service.

Incorrect Answers:

BAM Adapter: While OIC offers Business Activity Monitoring (BAM), it's not an SCA component itself. BAM functionality is typically accessed through integration with external tools.

B2B Agreement: B2B Agreements define message exchange protocols and security settings for Business-to-Business communication. They are not SCA components but are managed within OIC for integrations.

MFT Adapter: MFT (Managed File Transfer) functionality might be used within OIC, but the adapter itself wouldn't be a core SCA component. It would likely be referenced within a composite for file transfer operations.

Split-Join: This functionality is not directly represented as a separate SCA component. It's achieved through features within other SCA components like BPEL processes or Mediators for message branching and joining.

NEW QUESTION # 94

You are an Oracle Integration Cloud (OIC) specialist working on a project to integrate two systems using OIC. During testing, you notice that the integration instance fails to execute and returns an error message. Which step would you take first to troubleshoot the issue?

- A. Contact Oracle Support and wait for a response.
- B. Immediately restart the integration instance.
- **C. Check the instance logs for specific error messages and details.**
- D. Increase the number of instances to handle the error.

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

Troubleshooting in OIC begins with diagnostics:

Option A: Checking instance logs (via the Monitoring or Activity Stream page) provides detailed error messages, stack traces, and context- the first logical step.

Option B: Increasing instances addresses scalability, not root cause identification.

Option C: Restarting might clear transient issues but skips understanding the failure.

Option D: Contacting support is a later step after initial investigation.

Logs are the primary tool for pinpointing issues efficiently.

NEW QUESTION # 95

You have built an integration that includes an ERP Cloud Adapter connection. After the development has been completed, there is now a requirement to include newly added custom objects and custom attributes as part of the mappings. Which is the most efficient way to handle this requirement?

- A. Check the Refresh Metadata option for the ERP Cloud Connection, navigate back to your integration, then delete and recreate the map action to include the new custom objects and attributes.
- **B. Check the Refresh Metadata option for the ERP Cloud Connection, navigate back to your integration, then edit the map action to include the new custom objects and attributes.**
- C. Delete the invoke action to the ERP Cloud, re-create it, then edit the map action to include the new custom objects and attributes.
- D. Delete the integration and recreate it to include the new custom objects and attributes in the mapaction.

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

ERP Updates:

B: True-refresh and edit is efficient.

NEW QUESTION # 96

.....

We are popular not only because we own the special and well-designed 1Z0-1042-25 exam materials but also for we can provide you with well-rounded services beyond your imagination. We have an authoritative production team and our 1Z0-1042-25 study guide is revised by hundreds of experts, which means that you can receive a tailor-made 1Z0-1042-25 preparations braindumps according to the changes in the syllabus and the latest development in theory and breakthroughs.
