According to the market research, we have found that a lot of people preparing for the Workday-Prism-Analytics exam want to gain the newest information about the exam. In order to meet all candidates requirement, we compiled such high quality Workday-Prism-Analytics study materials to help you. It is believed that our products will be very convenient for you, and you will not find the better study materials than our Workday-Prism-Analytics Exam Question. If you willing spend few hours to learn our study materials, you will pass the exam in a short time. Now we are going to introduce our Workday-Prism-Analytics test questions to you.

If you want to clear the Central Finance in Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) test, then you need to study well with real Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) exam dumps of ExamDumpsVCE. These Workday Workday-Prism-Analytics exam dumps are trusted and updated. We guarantee that you can easily crack the Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) test if use our actual Central Finance in Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) dumps.

>> New Workday-Prism-Analytics Test Topics <<

Workday-Prism-Analytics valid study questions & Workday-Prism-Analytics exam preparation & Workday-Prism-Analytics pdf vce training

Our Workday-Prism-Analytics preparation materials can have such good reputation and benefit from their own quality. You really can't find a more cost-effective product than Workday-Prism-Analytics learning quiz! Our company wants more people to be able

to use our products. We also hope that our products are really worth buying. Therefore, the quality of Workday-Prism-Analytics training engine is absolutely leading in the industry. And you can free download the demos of the Workday-Prism-Analytics study guide to check it out.

Workday Pro Prism Analytics Exam Sample Questions (Q19-Q24):

NEW QUESTION # 19

You want to remove data within a Prism data source without deleting any dependent custom reports. What task can you use to do this?

- A. Unpublish Dataset
- B. Inactivate Dataset
- C. Delete Published Rows
- D. Delete Dataset

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, removing data from a Prism data source (PDS) without affecting dependent custom reports requires a careful approach to preserve the data source's structure and dependencies.

According to the official Workday Prism Analytics study path documents, the task to use is Delete Published Rows (option D). This task removes the data rows within the Prism data source while keeping the data source's metadata (e.g., field definitions) and structure intact. Since custom reports depend on the data source's structure rather than the specific data rows, deleting the published rows will not break the reports. After deleting the rows, you can republish the dataset with updated data, and the reports will continue to function with the new data, assuming the structure remains unchanged.

The other options are incorrect:

- * A. Inactivate Dataset: Inactivating a dataset disables it but does not remove data from the published data source, and it may still affect reports by making the data source inaccessible.
- * B. Delete Dataset: Deleting the dataset entirely will also delete the Prism data source, breaking any dependent custom reports.
- * C. Unpublish Dataset: Unpublishing the dataset removes the Prism data source, which will break dependent reports until the dataset is republished.

The Delete Published Rows task ensures that data is removed from the Prism data source without impacting the dependent custom reports, allowing for seamless data updates.

NEW QUESTION # 20

What security domain enables the ability to create a dataset?

- A. Prism: Tables Create
- B. Prism Datasets: Publish
- C. Prism: Manage Data Source
- D. Prism Datasets: Create

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, the ability to create a dataset is governed by specific security domains within the Prism Analytics functional area. According to the official Workday Prism Analytics study path documents, the security domain that explicitly enables users to create datasets is the "Prism Datasets: Create" domain.

This domain grants users the necessary permissions to initiate the creation of both base and derived datasets within the Prism Analytics Data Catalog.

The process of creating a dataset involves defining the metadata and processing logic to manipulate data, which can include Workday or external (non-Workday) data sources. The "Prism Datasets: Create" domain ensures that only authorized users, such as Prism data analysts or administrators, can perform this task, aligning with Workday's configurable security framework. Other domains, such as "Prism Datasets: Publish," are responsible for publishing datasets to make them available as Prism Data Sources.

for reporting, while

"Prism: Manage Data Source" pertains to managing the data sources themselves, not creating datasets.

Similarly, "Prism: Tables Create" is related to creating tables, which is a distinct entity from datasets in Prism Analytics.

This distinction is critical, as datasets and tables serve different purposes in the data management workflow.

Datasets include metadata and a subset of example rows, while tables contain metadata and all data rows. The

"Prism Datasets: Create" domain is specifically designed to control access to dataset creation, ensuring secure and governed data preparation.

NEW QUESTION # 21

A Prism data writer needs to create a new Prism calculated field on a derived dataset using the CASE function. When creating a calculated field, what symbol do you use to view a list of fields that you can select from in the dataset?

- A. {
- B. #
- C. [
- D. (

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, when creating a calculated field in a derived dataset, users often need to reference existing fields in the dataset within their expressions, such as in a CASE function. According to the official Workday Prism Analytics study path documents, to view and select from a list of available fields in the dataset while building a calculated field expression, the user types the [symbol (left square bracket). This symbol triggers a dropdown list of all fields in the dataset, allowing the user to select the desired field without manually typing its name, reducing the risk of errors. For example, typing [and selecting a field like "Employee_ID" will insert [Employee_ID] into the expression, which can then be used in the CASE function logic.

The other symbols do not serve this purpose:

* B. (: Parentheses are used for grouping expressions or defining function parameters, not for field selection.

* C. #: The hash symbol is not used in Prism Analytics for field selection; it may be associated with other functionalities in different contexts.

* D. {: Curly braces are not used for field selection in Prism Analytics; they may be used in other systems for different purposes, such as templating.

The use of the [symbol ensures an efficient and accurate way to reference fields in a calculated field expression, streamlining the creation process in Prism Analytics.

NEW QUESTION # 22

You have a number of Workday reports that use a Prism data source. When are the values of the Prism calculated fields in the Workday reports calculated?

- A. At report run time.
- B. At time of publishing.
- C. At dataset creation time.
- D. At the calculated field creation time.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, calculated fields in a dataset are evaluated as part of the dataset's processing logic, and their values are materialized when the dataset is published as a Prism data source. According to the official Workday Prism Analytics study path

documents, the values of Prism calculated fields are calculated at the time of publishing (option D). When a dataset is published, Prism processes all transformation stages, including calculated fields, and the resulting values are stored in the published data source. Workday reports that use this Prism data source then retrieve these pre-calculated values, ensuring consistent and efficient reporting without recalculating the fields at report run time.

The other options are incorrect:

- * A. At report run time: Calculated field values are not computed when the Workday report is run; they are pre-calculated and stored in the Prism data source during publishing.
- * B. At dataset creation time: Dataset creation involves defining the transformation logic, but the actual computation of calculated fields occurs during publishing, not at creation.
- * C. At the calculated field creation time: Creating a calculated field defines its expression, but the values are not computed until the dataset is processed during publishing.

The calculation of Prism calculated fields at the time of publishing ensures that Workday reports can efficiently access the results without additional computation overhead.

NEW QUESTION # 23

You had to change the imported pipeline in a Join stage and your View Dataset Lineage report shows a Stage Alert regarding the disconnected pipeline. How can you fix this and make the alert disappear?

- **A. Delete the disconnected pipeline.**
- B. Change the imported pipeline to a different one.
- C. Add a Manage Fields stage and re-attach the pipeline.
- D. Publish the derived dataset.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a Stage Alert in the View Dataset Lineage report indicates an issue with the dataset's transformation pipeline, such as a disconnected pipeline resulting from changing the imported pipeline in a Join stage. According to the official Workday Prism Analytics study path documents, a disconnected pipeline occurs when a pipeline (e.g., a table or dataset) is no longer referenced by any transformation stage, often after modifying the Join stage to use a different imported pipeline. To resolve this alert, the recommended action is to delete the disconnected pipeline (option D). By removing the disconnected pipeline from the dataset, the lineage is updated to reflect only the active pipelines, and the Stage Alert will disappear, indicating that the dataset's configuration is now valid.

The other options are not appropriate:

- * A. Add a Manage Fields stage and re-attach the pipeline: A Manage Fields stage modifies field properties and cannot re-attach a disconnected pipeline to the Join stage.
- * B. Publish the derived dataset: Publishing the dataset does not resolve the issue of a disconnected pipeline; the alert will persist until the pipeline is addressed.
- * C. Change the imported pipeline to a different one: This does not address the disconnected pipeline; it only changes the Join stage's configuration again, potentially causing further issues.

Deleting the disconnected pipeline ensures the dataset's lineage is clean and free of errors, resolving the Stage Alert in the View Dataset Lineage report.
