当社MogiExamのPlat-Arch-201学習教材は、実際のPlat-Arch-201試験に対する自信を高め、参加する試験の質問と回答を思い出すのに役立ちます。最も適したバージョンを選択できます。当社のPlat-Arch-201試験トレンドは、重要な情報を簡素化し、焦点を絞ってPlat-Arch-201テストトレンドを短時間で習得できるようにします。Plat-Arch-201学習教材の包括的な理解を得るために、Plat-Arch-201試験問題のデモを無料でダウンロードする場合は、まず製品の紹介をご覧ください。

Salesforce Certified Platform Data Architect 認定 Plat-Arch-201 試験問題 (Q226-Q231):

質問 # 226

Universal Containers (UC) is using Salesforce Sales & Service Cloud for B2C sales and customer service but they are experiencing a lot of duplicate customers in the system. Which are two recommended approaches for UC to avoid duplicate data and increase the level of data quality?

- A. Use Duplicate Management.
- B. Use an Enterprise Service Bus.
- C. Use a data warehouse.
- D. Use Data.com Clean

正解: A、D

解説:

Using Duplicate Management and Data.com Clean are two recommended approaches for UC to avoid duplicate data and increase the level of data quality. Duplicate Management can prevent or alert users when they try to create or edit records that are duplicates of existing records.

Data.com Clean can compare Salesforce records with Data.com records and provide suggestions for updates or removals of duplicate records.

質問 # 227

Get Cloudy Consulting monitors 15,000 servers, and these servers automatically record their status every 10 minutes. Because of company policy, these status reports must be maintained for 5 years. Managers at Get Cloudy Consulting need access to up to one week's worth of these status reports with all of their details. An Architect is recommending what data should be integrated into Salesforce and for how long it should be stored in Salesforce. Which two limits should the Architect be aware of? (Choose two.)

- A. Workflow rule limits
- B. Data storage limits
- C. Webservice callout limits
- D. API Request limits

正解: B、D

解説:

Data storage limits and API request limits are two important factors that affect the data integration and storage in Salesforce. Data storage limits determine how much data can be stored in Salesforce, and API request limits determine how many API calls can be made to Salesforce in a

24-hour period. Both of these limits depend on the edition and license type of the Salesforce org.

Workflow rule limits and webservice callout limits are not directly related to data integration and storage, but rather to business logic and external services.

質問 # 228

A national nonprofit organization is using Salesforce to recruit members. The recruitment process requires a member to be matched with a volunteer opportunity. Given the following:

1. A record is created in Project__c and used to track the project through completion.
2. The member may then start volunteering and is required to track their volunteer hours, which is stored in VTOTime__c object related to the project.
3. Ability to view or edit the VTOTime__c object needs to be the same as the Project__c record.
4. Managers must see total hours volunteered while viewing the Project__c record.

Which data relationship should the data architect use to support this requirement when creating the custom VTOTime__c object?

- A. Lookup field on VTOTime__c to Project__c with formula field on Project__c showing Sum of hours from VTOTime__c records.
- B. Master Detail field on Project__c to VTOTime__c showing a list of VTOTime__c Records in a related list.
- C. Master Detail Field on VTOTime__c to Project__c with rollup summary field on Project__c showing sum of hours from VTOTime__c records.
- D. Lookup Field on Project__c to VTOTime__c displaying a list of VTOTime__c in a related list.

正解: C

解説:

A master-detail field on VTOTime__c to Project__c is the data relationship that the data architect should use to support the requirement when creating the custom VTOTime__c object. A master-detail relationship creates a parent-child relationship between two objects, where the master record controls certain behaviors of the detail record, such as security, ownership, deletion, and roll-up summary fields. By using a master-detail field on VTOTime__c to Project__c, you can ensure that the ability to view or edit the VTOTime__c object is the same as the Project__c record, and that managers can see the total hours volunteered while viewing the Project__c record using a roll-up summary field.

質問 # 229

Universal Containers (UC) has deployed Salesforce to manage Marketing, Sales, and Support efforts in a multi-system ERP environment. After reaching the limits of native reports & dashboards, UC leadership is looking to understand what options can be used to provide more analytical insights. What two approaches should an architect recommend? Choose 2 answer

- A. Wave Analytics
- B. Weekly Snapshots
- C. Setup Audit Trails
- D. AppExchange Apps

正解: A、D

解説:

According to the exam guide, one of the objectives is to "describe the use cases and considerations for using AppExchange apps and Wave Analytics". This implies that options A and B are both valid approaches to provide more analytical insights.

質問 # 230

A large multinational B2C Salesforce customer is looking to implement their distributor management application in Salesforce. The application has the following capabilities:

1. Distributors create sales orders in Salesforce.
2. Sales orders are based on product prices applicable to their region.
3. Sales orders are closed once they are fulfilled.
4. It is decided to maintain the order in opportunity object.

How should the data architect model this requirement?

- A. Manually update Opportunities with Prices application to distributors.
- B. Configure Price Books for each region and share with distributors.
- C. Create lookup to Custom Price object and share with distributors.
- D. Add custom fields in Opportunity and use triggers to update prices.

正解: B

解説:

According to the Salesforce documentation, an opportunity is a standard object that represents a potential sale or deal with an account or contact. An opportunity can have products and prices associated with it using price books. A price book is a standard object that contains a list of products and their prices for different regions, currencies, segments, etc. A price book can be shared with different users or groups based on their visibility and access settings.

To model the requirement of implementing a distributor management application in Salesforce, where distributors create sales orders based on product prices applicable to their region, and sales orders are closed once they are fulfilled, a data architect should: Configure price books for each region and share with distributors (option B). This means creating different price books for different regions with the appropriate products and prices, and sharing them with the distributors who belong to those regions. This way, distributors can create sales orders (opportunities) using the price books that are relevant to their region.

質問 # 231

.....

人間はそれぞれ夢を持っています。適当な方法を採用する限り、夢を現実にすることができます。MogiExamのSalesforceのPlat-Arch-201試験トレーニング資料を利用したら、SalesforceのPlat-Arch-201認定試験に合格することができますようになります。どうしてですかと質問したら、MogiExamのSalesforceのPlat-Arch-201試験トレーニング資料はIT認証に対する最高のトレーニング資料ですから。その資料は最完全かつ最新で、合格率が非常に高いということで人々に知られています。それを持っていたら、あなたは時間とエネルギーを節約することができます。MogiExamを利用したら、あなたは楽に試験に受かることができます。
