Scaled Agile SAFe-RTE (SAFe Release Train Engineer) Exam is designed to test the skills and knowledge of professionals who are responsible for leading and managing Agile Release Trains (ARTs) in the Scaled Agile Framework (SAFe). The SAFe-RTE certification is aimed at Release Train Engineers, Solution Train Engineers, Program Managers, Scrum Masters, and Agile Coaches who are looking to enhance their expertise in the field of Agile software development.

The SAFe-RTE certification exam is not easy, and it requires significant preparation to pass. SAFe-RTE exam consists of multiple-choice questions and is timed, so individuals must be knowledgeable and quick on their feet to succeed. However, with adequate preparation and study, passing the exam is achievable.

Scaled Agile Framework (SAFe) is a popular methodology for managing and coordinating large-scale software development projects. SAFe provides a comprehensive set of guidelines and best practices to help organizations streamline their development processes and improve the quality of their software products. One of the key roles in implementing SAFe is that of the Release Train Engineer (RTE). The RTE is responsible for coordinating the activities of multiple Agile teams and ensuring that they are working together effectively to deliver high-quality software products.

Scaled Agile SAFe Release Train Engineer Sample Questions (Q88-Q93):

NEW QUESTION # 88

The goal of Lean is to deliver the maximum customer value in the shortest sustainable lead time while providing what else?

- A. Significant team contributions
- B. The highest possible quality

- C. A Continuous Delivery Pipeline
- D. Improved capacity allocation

Answer: B

Explanation:

The goal of Lean within the context of SAFe is to deliver the maximum customer value in the shortest sustainable lead time while maintaining the highest possible quality. This is achieved by optimizing the flow of value through the Continuous Delivery Pipeline and by ensuring that all steps in the process contribute to the creation of value. The focus on quality is integral to Lean because it ensures that the products or services delivered are not only fast and efficient but also meet the customer's needs and expectations¹²³⁴.

NEW QUESTION # 89

After an Agile Release Train's first Program Increment (PI) Planning event, what action can the Release Train Engineer take to help optimize the Program Backlog readiness for the next PI?

- A. Ask the Lean Portfolio Management function to hold regular Epic review meetings so new Epics will flow to the Agile Release Train
- B. Ask Product Management and the System Architect what the new Program Back-log looks like just before the next Innovation and Planning (IP) Iteration, so social-ization can begin
- **C. Coach Product Management and the System Architect to include Program Backlog refinement into their cadence-based approach**
- D. Compile all the teams' objectives from PI Planning and send out a summary report

Answer: C

Explanation:

The Release Train Engineer (RTE) plays a crucial role in facilitating the Agile Release Train (ART) events and processes, and one of their responsibilities is to ensure the readiness of the Program Backlog for the next Program Increment (PI) planning. According to the SAFe framework, the RTE should coach Product Management and the System Architect to include Program Backlog refinement into their regular cadence².

This ensures that the backlog is continuously groomed and ready for the upcoming PI planning events. The Program Backlog is a holding area for upcoming Features intended to address user needs and deliver business benefits for a single ART, and it also contains the enabler features necessary to build the Architectural Runway¹. Refining the backlog is a continuous process that involves research activities and active collaboration with various stakeholders, managed through the Program Kanban system¹. By coaching Product Management and the System Architect to refine the backlog as part of their regular cadence, the RTE helps maintain a steady flow of backlog items that are well-understood, prioritized, and ready for implementation, thereby optimizing the Program Backlog readiness for the next PI².

NEW QUESTION # 90

What is a common reason why a team is unable to estimate a story?

- **A. The story lacks acceptance criteria**
- B. The team has no experience in estimating
- C. The team does not understand the tasks related to the story
- D. The story does not include a role

Answer: A

NEW QUESTION # 91

(Which of the SAFe Core Values enables trust across the ART?)

- A. Built-in Quality
- B. Adaptation
- C. Decentralized decision-making
- **D. Transparency**

Answer: D

Explanation:

Comprehensive and Detailed 250 to 250 words of Explanation From Exact Extract of SAFe 6.0, including the SAFe Release domains:

SAFe 6.0 defines four Core Values-Alignment, Built-in Quality, Transparency, and Program Execution- that guide behavior and decision-making across the enterprise. Among these, Transparency is the core value that explicitly enables trust across the Agile Release Train. SAFe emphasizes that trust is built when work, progress, risks, and challenges are visible to everyone. Transparency enables fact-based decision-making and fosters open communication across teams and stakeholders.

Practices such as System Demos, visible backlogs, PI Objectives, and objective metrics reinforce transparency by providing shared understanding and honest insight into the current state of the system. In the Release domain, transparency ensures that issues are surfaced early, dependencies are managed effectively, and teams can collaborate to resolve problems before they escalate. Without transparency, trust erodes, alignment weakens, and execution suffers.

The other options are not SAFe Core Values. Adaptation is part of the Inspect and Adapt cycle. Decentralized decision-making is a SAFe principle. Built-in Quality is a core value but focuses on ensuring quality at every step rather than explicitly enabling trust across the ART.

Therefore, Transparency is the SAFe Core Value that enables trust and supports effective collaboration, alignment, and execution across the Agile Release Train.

NEW QUESTION # 92

What are two common PI Planning anti-patterns? (Choose two.)

- A. Stories are created for the Iterations
- B. Scrum Masters who work with multiple teams do not have time for their teams
- C. Too much time is spent prioritizing Features
- D. The team decides which changes need to happen and when
- E. Too much time is spent analyzing each Story

Answer: E

Explanation:

This is an anti-pattern because it can lead to analysis paralysis, where teams spend excessive time discussing the details of each story rather than focusing on the broader objectives and deliverables for the Program Increment (PI). This can result in a lack of progress and delays in decision-making.

D: Scrum Masters who work with multiple teams do not have time for their teams: This anti-pattern occurs when Scrum Masters are spread too thin across multiple teams, which can lead to insufficient support for the teams they are supposed to be helping. It can cause a lack of focus and attention on the teams' needs, hindering the teams' ability to effectively plan and execute their tasks during the PI Planning event.
