C-CPI-2506 Exam Bootcamp | Latest C-CPI-2506 Exam Answers

Our products are definitely more reliable and excellent than other exam tool. What is more, the passing rate of our study materials is the highest in the market. There are thousands of customers have passed their exam and get the related certification. After that, all of their C-CPI-2506 Exam torrents were purchase on our website. In fact, purchasing our C-CPI-2506 actual test means you have

been half success. Good decision is of great significance if you want to pass the C-CPI-2506 exam for the first time.

SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 2	<ul style="list-style-type: none">• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 3	<ul style="list-style-type: none">• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 4	<ul style="list-style-type: none">• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.

SAP Certified Associate - Integration Developer Sample Questions (Q40-Q45):

NEW QUESTION # 40

You configure an Exception Subprocess. Which event starts the Exception Subprocess?

- A. Start Event
- B. Start Message Event
- **C. Error Start Event**
- D. Start Escalation

Answer: C

Explanation:

In SAP Cloud Integration, an Exception Subprocess is used to catch and handle errors during message processing.

It is always triggered by an Error Start Event.

When an error occurs in the main process (e.g., mapping error, adapter error), control is handed to the Exception Subprocess.

Other start events (Message, Escalation, Normal Start) are not valid in an Exception Subprocess.

Hence, the correct event to start the Exception Subprocess is the Error Start Event.

NEW QUESTION # 41

To activate the Event Mesh (EMIS) capability in the SAP Integration Suite, which role collections must be assigned to the user performing the activation?

- A. Integration_Administrator and Security_Auditor
- B. API_Manager and Monitoring-Viewer
- C. Process_orchestrator and Subaccount_Viewer
- **D. Integration_Provisioner and Subaccount Administrator**

Answer: D

Explanation:

To activate Event Mesh (EMIS) capability in SAP Integration Suite, the required role collections are:
Integration_Provisioner # Allows provisioning of new capabilities (including Event Mesh) in Integration Suite.
Subaccount Administrator # Grants permission to manage and configure subaccount-level entitlements and service activations.
Other options:
Integration_Administrator, API_Manager, Monitoring_Viewer # Used for operational tasks, not provisioning.
Process_orchestrator # Refers to on-premise PI/PO, not BTP roles.
Security_Auditor # Auditing role, not activation.
Thus, the correct roles are Integration_Provisioner and Subaccount Administrator.

NEW QUESTION # 42

What does the messaging model of the Apache Camel Data Model consist of?

- A. Header, Exchange ID, in-message
- B. Header, properties, attachment
- C. Header, body, properties
- **D. Header, body, attachment**

Answer: D

Explanation:

The messaging model of the Apache Camel Data Model consists of three parts: header, body, and attachment. The header contains information related to the message, such as addressing, routing, or metadata. The body contains the payload or the content of the message. The attachment contains optional data that can be attached to the message, such as files or images. The Apache Camel Data Model is used by SAP Integration Suite to process messages of any format using various components and data formats.
Reference: The Camel Data Model in a Nutshell | SAP Help Portal, Data Formats :: Apache Camel

NEW QUESTION # 43

In which of the following must you call `getBody()` to access the payload in a Groovy script?

- A. camelcontext
- B. property
- **C. message**
- D. header

Answer: C

Explanation:

To access the payload in a Groovy script, you must use the message object and call the `getBody()` method on it. The message object represents the current message that is being processed in the integration flow. It has methods to get and set the message body, headers, properties, and attachments. The `getBody()` method returns the message body as an object of the specified type, such as `java.lang.String`, `java.io.InputStream`, or `org.w3c.dom.Document`. Reference: General Scripting Guidelines | SAP Help Portal, Message | SAP Help Portal

NEW QUESTION # 44

What kind of editor can you use to manipulate integration flows?

- A. Command-line editor
- B. Code editor
- **C. Graphical editor**

Answer: C

Explanation:

In SAP Cloud Integration, integration flows are manipulated using a web-based graphical editor:

Allows drag-and-drop of adapters, mappings, scripts, and process steps.

Provides visual orchestration of message flows.

Command-line and raw code editors are not supported for iFlow design (though XML behind the iFlow exists, it is not directly edited by developers).
