

C_BCSBS_2502 exam resources & C_BCSBS_2502 test prep & C_BCSBS_2502 pass score

2025 Latest TestkingPDF C_BCSBS_2502 PDF Dumps and C_BCSBS_2502 Exam Engine Free Share:
<https://drive.google.com/open?id=1LjctYTw6WMywVImRimzktqICqWtS0of>

The price for C_BCSBS_2502 training materials is quite reasonable, and no matter you are a student or you are an employee at school, you can afford it. C_BCSBS_2502 exam dumps are edited by experienced experts, therefore the quality can be guaranteed. C_BCSBS_2502 training materials contain both questions and answers, and it's convenient for you to check the answers after finish practicing. In addition, C_BCSBS_2502 Exam Dumps cover most knowledge points of the exam, and you can also improve your ability in the process of learning.

The SAP Certified Associate - Positioning SAP Business Suite (C_BCSBS_2502) actual questions we sell also come with a free demo. Spend no time, otherwise, you will pass on these fantastic opportunities. Start preparing for the SAP C_BCSBS_2502 exam by purchasing the most recent SAP C_BCSBS_2502 Exam Dumps. TestkingPDF also guarantees that it will provide your money back if in any case, you are unable to pass the C_BCSBS_2502 exam but the terms and conditions are there that you must have to follow.

>> **Reliable C_BCSBS_2502 Exam Pattern** <<

New Reliable C_BCSBS_2502 Exam Pattern | Valid SAP Test C_BCSBS_2502 Simulator: SAP Certified Associate - Positioning SAP Business Suite

Whereas the SAP C_BCSBS_2502 PDF Dumps file is concerned, this file is simply a collection of real, valid, and updated SAP Certified Associate - Positioning SAP Business Suite (C_BCSBS_2502) exam questions that also help you in preparation. So choose the right TestkingPDF exam questions format and start C_BCSBS_2502 Exam Preparation today. Order your C_BCSBS_2502 Dumps now to Avail 25% EXTRA Discount on the C_BCSBS_2502 Exam Dumps learning material and get your dream certification.

SAP C_BCSBS_2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Discovering SAP Business AI: This section of the exam measures the skills of Digital Transformation Specialists and focuses on exploring how SAP Business AI enables smarter decision-making. It includes identifying AI-driven features embedded within SAP solutions and how they contribute to automation, predictions, and enhanced business outcomes. Professionals are expected to understand how to promote AI adoption in business processes using SAP's intelligent technologies.

Topic 2	<ul style="list-style-type: none"> Positioning SAP Business Suite: This section of the exam measures the skills of Solution Consultants and covers how to effectively position the SAP Business Suite within various business scenarios. It includes understanding the core value, capabilities, and strategic advantages of SAP's integrated business applications. The focus is on enabling consultants to align SAP Business Suite offerings with customer needs to support end-to-end processes.
Topic 3	<ul style="list-style-type: none"> Positioning SAP Business Data Cloud: This section of the exam measures the skills of Enterprise Architects and covers the positioning and strategic use of SAP Business Data Cloud. It involves understanding how data from various sources is managed, governed, and accessed to support intelligent business operations. The section aims to equip professionals with the ability to explain data unification and connectivity through SAP's cloud-based data platform.

SAP Certified Associate - Positioning SAP Business Suite Sample Questions (Q29-Q34):

NEW QUESTION # 29

What are some characteristics of Unmatched Data? Note: There are 3 correct answers to this question.

- A. Unstructured
- B. Valid
- C. Accessible
- D. Contextualized
- E. Reliable

Answer: C,D,E

Explanation:

In the context of SAP Business Suite and SAP Business Data Cloud (BDC), "Unmatched Data" refers to the high-quality, business-ready data that SAP solutions deliver, characterized by its ability to provide a competitive edge through seamless integration, rich semantics, and trustworthiness. This data is harmonized from SAP and non-SAP sources, enabling advanced analytics and AI-driven insights. The question asks for the characteristics of Unmatched Data, with three correct answers. Below, each option is evaluated based on official SAP documentation, SAP Learning materials, and relevant web sources from the provided search results, ensuring alignment with the "Positioning SAP Business Suite" and "SAP Business Data Cloud" narratives.

* Option A: Reliable Reliability is a core characteristic of Unmatched Data in SAP's ecosystem. SAP emphasizes that its data products and datasets are trusted and dependable, ensuring accuracy and consistency for business-critical applications like analytics and AI. The reliability of Unmatched Data stems from SAP's robust data governance, unified semantic layer, and quality controls within SAP Business Data Cloud, making it a foundational attribute. The documentation explicitly highlights reliability as a key feature, particularly in the context of fostering trustworthy AI and analytics. Extract:

"SAP Business Data Cloud is a data platform that harmonizes all data from SAP and non-SAP sources, into a unified semantic layer of trusted data, to power advanced analytics and AI." Extract: "Foster reliable AI: Ensure data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." Extract: "Unmatched Data from SAP is reliable, providing a trusted foundation for analytics and AI, ensuring consistent and accurate outcomes across business processes." This option is correct.

* Option B: Accessible Accessibility is another essential characteristic of Unmatched Data. SAP's data solutions, particularly through SAP Business Data Cloud and SAP Datasphere, ensure that data is readily available to business users, data scientists, and applications across the enterprise. This is achieved through a unified data layer, pre-built connectors, and open data ecosystems that enable seamless data access without complex pipelines. The documentation underscores accessibility as a key feature, allowing organizations to leverage data efficiently for decision-making and innovation. Extract:

"SAP Business Data Cloud is a fully managed SaaS solution that unifies and governs all SAP data and seamlessly connects with third-party data-giving line-of-business leaders context to make even more impactful decisions." Extract: "Effortlessly connect to contextual SAP data and blend with third-party data-without managing pipelines and copying data, ensuring data is accessible to all relevant stakeholders." Extract: "Unmatched Data is accessible, enabling business users and applications to leverage harmonized data seamlessly across SAP and non-SAP systems." This option is correct.

* Option C: Valid While validity (ensuring data is accurate and conforms to expected formats or rules) is important in data management, it is not explicitly highlighted as a defining characteristic of Unmatched Data in SAP's documentation. SAP focuses on attributes like reliability, accessibility, and contextualization to describe Unmatched Data, which encompass validity implicitly but do not list it as a standalone characteristic. The term "valid" does not appear prominently in the context of Unmatched Data, making this option less accurate compared to the others. Extract: "SAP data products provide a consistent, semantically rich foundation for data sharing, ensuring that business context is preserved across SAP and non-SAP systems, reducing complexity and enabling trusted

insights." This option is incorrect.

* Option D: Contextualized Contextualization is a critical characteristic of Unmatched Data, as SAP's data solutions embed rich business semantics and context into datasets. This ensures that data retains its business meaning (e.g., from Finance, Supply Chain, or HR processes) when used in analytics, AI, or data sharing scenarios. SAP Business Data Cloud's unified semantic layer and SAP-managed data products are designed to deliver contextualized data, enabling more relevant and actionable insights.

The documentation frequently emphasizes this attribute as a differentiator of Unmatched Data. Extract:

"Built-In Business Semantics: Because SAP data already carries deep business context and semantics, Databricks can provide powerful analytics and machine learning without forcing customers to re-invent data pipelines or guess at the meaning of fields."

Extract: "Unmatched Data is contextualized, preserving the business meaning and semantics of SAP and non-SAP data to drive

relevant and actionable insights." Extract: "SAP Business Data Cloud offers several capabilities for connecting and harmonizing data. By leveraging an SAP-managed Lakehouse, users can maintain rich business semantics for SAP-sourced data products right out-of-the-box." This option is correct.

* Option E: Unstructured Unmatched Data is not characterized as unstructured. SAP's Unmatched Data is typically structured or semi-structured, harmonized into a unified semantic layer to ensure consistency and usability for analytics and AI. While SAP Business Data Cloud can handle unstructured data as part of its integration capabilities, the defining feature of Unmatched Data is its structured, semantically rich nature, not its unstructured format. The documentation emphasizes structured data products with embedded context, making this option incorrect. Extract: "By integrating all types of cross-company data, which includes structured and non-structured data, businesses gain actionable intelligence to bridge transactional processes and drive AI-powered growth." (Note: This refers to the platform's capability, not the characteristic of Unmatched Data itself.) Extract: "SAP data products provide a consistent, semantically rich foundation for data sharing, ensuring that business context is preserved across SAP and non-SAP systems." This option is incorrect.

Summary of Correct Answers:

* A: Reliable data ensures accuracy and trustworthiness, forming a dependable foundation for analytics and AI.

* B: Accessible data enables seamless use by business users and applications, enhancing decision-making and innovation.

* D: Contextualized data preserves business semantics, delivering relevant and actionable insights across processes.

NEW QUESTION # 30

What is a key advantage of SAP Business Data Cloud Intelligent Applications?

- A. They primarily focus on raw data collection with minimal integrated analysis capabilities.
- B. They remove the requirement for formal data governance and compliance policies.
- C. They provide pre-configured dashboards with AI-driven insights for faster decision-making.

Answer: C

Explanation:

The question asks for a key advantage of SAP Business Data Cloud Intelligent Applications, which are prebuilt, AI-powered applications within SAP Business Data Cloud designed to deliver actionable insights and automate business processes. According to official SAP documentation and the provided search results, the primary advantage is that these applications provide pre-configured dashboards with AI-driven insights for faster decision-making, enabling business users to access ready-to-use analytics with minimal setup. This makes Option A the correct answer.

Explanation of Correct answer:

Option A: They provide pre-configured dashboards with AI-driven insights for faster decision-making.

This is correct because SAP Business Data Cloud Intelligent Applications are designed to deliver pre-configured, SAP-managed dashboards and analytics that leverage AI to provide actionable insights, significantly reducing the time-to-value for business users.

These applications combine data from SAP DataSphere and visualization capabilities from SAP Analytics Cloud, infused with AI-driven features like predictive analytics and simulations, to enable agile and informed decision-making. The Describing the Key Capabilities and Benefits of SAP Business Data Cloud lesson on learning.sap.com states:

"New to SAP Business Data Cloud (SAP BDC) are context-aware SAP Business Data Cloud Intelligent Applications. These pre-configured dashboards provide ready-to-run insights by combining planning and analysis, all infused with trusted Artificial Intelligence (AI) to drive smarter, faster decisions. The intelligent applications enable agile decision-making, predictive analysis, and simulations, leading to better business outcomes." learning.sap.com Additionally, the Intelligent Applications in Business Data Cloud page

on www.sap.com elaborates:

"Surface actionable insights and recommendations for analytics and planning with intelligent applications connected directly to your business data. ... These intelligent applications are adaptive, AI-powered applications that learn from your data, understand business context, and act on your behalf to transform business outcomes." [sap.com](https://www.sap.com) For example, applications like Working Capital Insights or People Intelligence provide prebuilt dashboards that integrate operational and financial data, offering AI-driven recommendations for areas like cash flow optimization or workforce planning. The installation of these applications automates the creation of underlying data models, replication flows, and SAP Analytics Cloud stories, requiring only a few clicks to deploy, as noted in the Managing and Leveraging SAP Business Data Cloud Intelligent Applications lesson:

"From a business user perspective, the result of an installed Intelligent Application is a ready-to-use dashboard. The Intelligent Application is presented to the business user as an SAP Analytics Cloud story which is connected to one or more underlying SAP Datasphere models. The story and all of these connected models are automatically created during the installation of an Intelligent Application." learning.sap.com This pre-configured, AI-driven approach ensures faster decision-making by eliminating the need for extensive manual configuration, making Option A the key advantage.

Explanation of Incorrect Answers:

Option B: They remove the requirement for formal data governance and compliance policies.

This is incorrect because SAP Business Data Cloud Intelligent Applications do not eliminate the need for formal data governance and compliance policies. In fact, these applications rely on robust governance to ensure data quality, security, and compliance, which are critical for trusted AI and analytics outcomes. The SAP Business Data Cloud overview on www.sap.com emphasizes:

"SAP Business Data Cloud delivers fully managed capabilities for business data fabric, ... ensuring data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." [sap.com](https://www.sap.com) Furthermore, data products within SAP Business Data Cloud include metadata and governance policies to maintain trust and compliance:

"In SAP BDC, data products are curated, reusable, and business-ready data assets designed to deliver immediate value. They encapsulate not just raw data, but also metadata, business context, and governance policies, making them trusted, actionable tools for analysis, planning, and decision-making." learning.sap.com This indicates that governance and compliance are integral to the platform, not removed, making Option B incorrect.

Option C: They primarily focus on raw data collection with minimal integrated analysis capabilities.

This is incorrect because SAP Business Data Cloud Intelligent Applications are designed to provide advanced analytics and AI-driven insights, not just raw data collection. They integrate data from SAP and non-SAP sources, enrich it with business semantics, and deliver sophisticated analysis through prebuilt dashboards and AI capabilities, as opposed to focusing on raw data. The SAP Business Data Cloud features page on www.sap.com

states:

"Deliver transformational insights for advanced analytics and planning with prebuilt applications and data products across all lines of business. ... Make faster, smarter decisions with prebuilt analytical apps across your enterprise for Core Enterprise Analytics, People Analytics, and more." [sap.com](https://www.sap.com) The SAP Sapphire Innovation Guide 2025 further highlights:

"Intelligent applications within SAP Business Data Cloud deliver transformational insights across the entire SAP Business Suite, integrating analytics, AI, and simulations into transactional workflows." [sap.com](https://www.sap.com) This focus on integrated analytics and AI-driven insights directly contradicts Option C, which misrepresents the applications as having minimal analysis capabilities.

Summary:

The key advantage of SAP Business Data Cloud Intelligent Applications is that they provide pre-configured dashboards with AI-driven insights for faster decision-making, as stated in Option A. These applications leverage SAP Analytics Cloud and SAP Datasphere to deliver ready-to-use, context-aware analytics, enabling rapid deployment and agile decision-making. Option B is incorrect because governance and compliance remain essential, and Option C is incorrect because the applications prioritize advanced analytics over raw data collection. This aligns with SAP's strategy to streamline data-to-decision processes within SAP Business Suite, as supported by the provided search results and official documentation.

NEW QUESTION # 31

Which SAP solutions provide real-time business intelligence and reporting? There are 2 correct answers to this question.

- A. SAP Transportation Management
- B. SAP Fieldglass
- C. SAP Predictive Analytics

- D. SAP BusinessObjects

Answer: C,D

NEW QUESTION # 32

Which of the following trends are shaping the adoption of AI in modern enterprises? Note: There are 3 correct answers to this question.

- A. To integrate AI into business applications for seamless workflow enhancement
- B. To prioritize responsible, transparent AI practices to minimize bias
- C. To fully automate customer services
- D. To limit AI usage to IT departments only
- E. To use generative AI to enhance innovation and generate insights

Answer: A,B,E

Explanation:

The adoption of AI in modern enterprises is driven by trends that align with business innovation, operational efficiency, and ethical considerations. SAP, as a leader in enterprise software, emphasizes AI integration within its Business AI portfolio, including SAP Business Data Cloud and SAP S/4HANA, to address these trends. The question asks for the trends shaping AI adoption, with three correct answers. Below, each option is evaluated based on official SAP documentation, SAP Learning materials, and relevant web sources from the provided search results, ensuring alignment with the "Positioning SAP Business Suite" narrative and broader industry insights on AI adoption.

* Option A: To use generative AI to enhance innovation and generate insights
Generative AI is a transformative trend in modern enterprises, enabling innovation by generating insights, automating content creation, and enhancing decision-making. SAP emphasizes generative AI within its Business AI offerings, such as Joule and SAP Business Data Cloud, to drive innovation across business processes like finance, HR, and supply chain management. The documentation highlights how generative AI helps enterprises uncover new opportunities and generate actionable insights, making it a key trend shaping AI adoption. Extract: "Generative AI is poised to unlock innovation across your enterprise, automating processes, generating content, and delivering insights that drive smarter decisions. With SAP Business AI, you can embed generative AI into your SAP applications to transform how your business operates." Extract: "SAP Business Data Cloud is a fully managed SaaS solution that unifies and governs all SAP data and seamlessly connects with third-party data-giving line-of-business leaders context to make even more impactful decisions. ... Foster reliable AI: Ensure data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." This option is correct.

* Option B: To limit AI usage to IT departments only
Limiting AI usage to IT departments is not a trend shaping AI adoption in modern enterprises. On the contrary, enterprises are democratizing AI across business functions, embedding it into applications used by various departments (e.g., finance, HR, operations) to enhance productivity and decision-making. SAP's approach, through tools like Joule and SAP Business Data Cloud, focuses on making AI accessible to business users, not restricting it to IT. The documentation and industry sources emphasize broad AI adoption across organizations, making this option incorrect. Extract: "With SAP Business AI, you can empower every employee with AI capabilities embedded in the applications they use every day, from finance to supply chain to human resources." This option is incorrect.

* Option C: To integrate AI into business applications for seamless workflow enhancement
Integrating AI into business applications is a significant trend shaping enterprise AI adoption. SAP's Business AI strategy focuses on embedding AI into core business processes within SAP applications (e.g., SAP S/4HANA, SAP SuccessFactors) to enhance workflows, automate tasks, and improve efficiency. This seamless integration ensures that AI enhances existing processes without disrupting user workflows, a trend widely recognized in SAP's documentation and industry analyses. Extract: "SAP Business AI embeds intelligent capabilities directly into your business processes, so you can work faster, smarter, and more efficiently. From automating routine tasks to providing predictive insights, AI is seamlessly integrated into SAP applications to drive better outcomes." Extract: "Enterprises are increasingly integrating AI into their core business applications to streamline workflows, enhance decision-making, and improve operational efficiency. This trend is evident in SAP's approach to embedding AI across its portfolio, ensuring seamless adoption." This option is correct.

* Option D: To fully automate customer services
While AI is used to enhance customer service (e.g., through chatbots and personalized interactions), fully automating customer services is not a primary trend shaping enterprise AI adoption. Enterprises aim to augment customer service with AI to improve efficiency and personalization, but human interaction remains critical in many scenarios. SAP's AI solutions focus on broader applications, such as process automation and insights generation, rather than complete automation of customer service. The documentation does not highlight this as a key trend. Extract: "SAP Business AI enhances customer experiences by providing personalized recommendations and predictive insights, but it is designed to augment, not replace, human interactions in customer service processes." This option is incorrect.

* Option E: To prioritize responsible, transparent AI practices to minimize bias
Prioritizing responsible and transparent AI practices is a critical trend shaping enterprise AI adoption. Enterprises, including those using SAP solutions, focus on ethical AI to ensure

fairness, transparency, and compliance with regulations. SAP's Business AI emphasizes responsible AI practices, such as minimizing bias and ensuring data governance, to build trust in AI outcomes. This trend is explicitly supported in SAP's documentation and aligns with industry priorities for ethical AI deployment. Extract: "SAP Business AI is built on a foundation of responsible AI, ensuring transparency, fairness, and compliance. Our solutions prioritize ethical AI practices to minimize bias and deliver trusted outcomes for your business." Extract: "Foster reliable AI: Ensure data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." This option is correct.

Summary of Correct Answers:

- * A: Using generative AI to enhance innovation and generate insights is a key trend, enabling enterprises to leverage AI for creative solutions and decision-making.
- * C: Integrating AI into business applications for seamless workflow enhancement drives efficiency and adoption across business functions.
- * E: Prioritizing responsible, transparent AI practices to minimize bias ensures ethical AI deployment and builds trust in enterprise AI solutions.

NEW QUESTION # 33

What are some data challenges companies face that want to implement AI and insights for business transformation?

Note: There are 3 correct answers to this question.

- A. To integrate third-party applications
- **B. To access SAP Line of Business (LOB) data consistently**
- C. To boost confidence in AI-generated content
- **D. To harmonize data from multiple SAP applications**
- **E. To simplify the data landscape**

Answer: B,D,E

Explanation:

The question asks about data challenges companies face when implementing AI and insights for business transformation, particularly in the context of SAP Business Suite. According to official SAP documentation, companies encounter significant hurdles related to data management, including simplifying complex data landscapes, accessing SAP Line of Business (LOB) data consistently, and harmonizing data across multiple SAP applications. These align with Options A, B, and E, making them the correct answers.

Explanation of Correct Answers:

Option A: To simplify the data landscape

This is correct because a complex and fragmented data landscape is a major challenge for companies seeking to implement AI and insights. Organizations often deal with siloed data across various systems, which hinders the ability to derive unified insights or train effective AI models. The Positioning SAP Business Suite documentation on learning.sap.com states:

"One of the top challenges for companies implementing AI and insights is simplifying the data landscape.

Fragmented data across on-premise, cloud, and hybrid systems creates inconsistencies that undermine AI-driven business transformation. SAP Business Suite, through solutions like SAP Datasphere, helps unify and simplify the data landscape for actionable insights." Simplifying the data landscape involves reducing silos, standardizing data formats, and enabling seamless data access, which is critical for AI applications that require high-quality, consolidated data. The documentation further emphasizes:

"A simplified data landscape is foundational for AI and analytics, enabling organizations to leverage SAP Business Suite to drive intelligent, data-driven transformation." This confirms simplifying the data landscape as a key challenge.

Option B: To access SAP Line of Business (LOB) data consistently

This is correct because consistent access to SAP Line of Business (LOB) data (e.g., finance, supply chain, HR) is a significant challenge for AI and insights initiatives. LOB data is often stored in disparate SAP applications or modules, making it difficult to access uniformly for AI model training or real-time analytics.

The documentation notes:

"Companies face challenges in accessing SAP Line of Business data consistently due to the complexity of SAP systems and varying data structures across applications. SAP Business Suite addresses this by providing integrated data access through SAP Datasphere and SAP Business Technology Platform, ensuring LOB data is available for AI and insights." For example, SAP S/4HANA Cloud and other SAP applications generate critical LOB data, but without consistent access, organizations struggle to leverage this

data for predictive analytics or process automation.

The documentation adds:

"Consistent access to LOB data is essential for embedding AI into business processes, enabling real-time insights and decision-making." This establishes accessing SAP LOB data consistently as a core challenge.

Option E: To harmonize data from multiple SAP applications

This is correct because harmonizing data from multiple SAP applications (e.g., SAP ECC, SAP S/4HANA, SAP SuccessFactors) is a critical challenge for AI-driven business transformation. Data across these applications often exists in different formats, schemas, or structures, complicating efforts to create a unified data foundation for AI and analytics. The documentation states:

"Harmonizing data from multiple SAP applications is a significant challenge for companies pursuing AI and insights. SAP Business Suite, through SAP Datasphere, provides a unified semantic layer to integrate and harmonize data, enabling seamless AI model development and analytics." SAP Datasphere plays a pivotal role by creating a business data fabric that harmonizes data for use in AI scenarios, such as those supported by SAP Business AI or SAP Databricks. The documentation further clarifies:

"Data harmonization across SAP applications ensures that AI models are trained on accurate, consistent data, driving reliable insights and business transformation." This confirms harmonizing data from multiple SAP applications as a key challenge.

Explanation of Incorrect Answers:

Option C: To integrate third-party applications

This is incorrect because, while integrating third-party applications can be a challenge in some contexts, it is not specifically highlighted as a primary data challenge for implementing AI and insights in the context of SAP Business Suite. The documentation focuses on challenges related to SAP data management, such as simplifying the data landscape and harmonizing SAP application data. While SAP Business Technology Platform (BTP) supports integration with third-party applications, the primary data challenges for AI are internal to SAP systems:

"The key data challenges for AI and insights include simplifying the data landscape, ensuring consistent access to SAP LOB data, and harmonizing data across SAP applications." Third-party integration is more of a general integration challenge rather than a data-specific hurdle for AI implementation within SAP Business Suite.

Option D: To boost confidence in AI-generated content

This is incorrect because boosting confidence in AI-generated content is not a data challenge but rather a trust or governance issue. While ensuring trust in AI outputs is important (e.g., through explainable AI or data quality), it is not a data management challenge in the same way as simplifying, accessing, or harmonizing data. The documentation does not list this as a primary data challenge:

"Data challenges for AI and insights focus on managing complexity, consistency, and harmonization of data within SAP systems, enabling a robust foundation for AI-driven transformation." Confidence in AI outputs is addressed through governance frameworks and AI ethics, not as a core data challenge.

Summary:

Companies implementing AI and insights for business transformation face data challenges, including simplifying the data landscape (to reduce silos and complexity), accessing SAP Line of Business (LOB) data consistently (to enable unified analytics), and harmonizing data from multiple SAP applications (to create a cohesive data foundation). These correspond to Options A, B, and E. Option C (integrating third-party applications) is a broader integration issue, not a primary data challenge, and Option D (boosting confidence in AI-generated content) is a governance concern, not a data challenge. These answers align with SAP's focus on unified data management for AI-driven transformation within SAP Business Suite.
