Salesforce-MuleSoft-Associate模擬体験 & Salesforce-MuleSoft-Associate真

実試験

Salesforce人々は最近非常に忙しいので、Salesforce-MuleSoft-Associate試験の準備に昼食時間を有効に活用したいと考えています。学習ツールとしてSalesforce-MuleSoft-Associate試験問題を選択した場合、問題は解決しません。Salesforce-MuleSoft-Associate試験準備のアプリはいつでもオフラインでの練習をサポートしているためです。当社の製品を購入する場合、GoShikenオフライン状態でも学習を続けることができます。Salesforce Certified MuleSoft Associateネットワーク全体の不可能な状態に影響されることはありません。いつでもどこでも当社のSalesforce-MuleSoft-Associate試験準備を使用することを選択できます

Salesforce Salesforce-MuleSoft-Associate 認定試験の出題範囲:

| トピック | 出題範囲 |
|--------|---|
| トピック 1 | <ul style="list-style-type: none">Describe the components and benefits of Anypoint Platform for API management: This section of the exam is designed for Integration Architects and focuses on MuleSoft's approach to API management. It outlines the primary components of Anypoint Platform that facilitate full lifecycle API development, including Universal API Management. The content highlights how the platform supports API-led connectivity and compares it with traditional API management approaches, emphasizing its superiority in delivering scalable and manageable enterprise APIs. |
| トピック 2 | <ul style="list-style-type: none">Recognize common integration problems, use cases, and technical solutions: This section of the exam measures the skills of an Integration Architect and focuses on recognizing integration scenarios and choosing appropriate technologies. It distinguishes between enterprise system types and compares traditional versus modern integration approaches. Candidates are expected to deconstruct complex business problems into core use cases and identify suitable technologies to support them. A solid understanding of technology classes and their application in business scenarios is tested, along with knowledge of how to break down an integration solution into its system components. |
| トピック 3 | <ul style="list-style-type: none">Identify the roles, responsibilities, and lifecycle of an integration project: This section of the exam measures the skills of an Integration Architect and covers the foundational responsibilities within a MuleSoft integration project. It explores why integration initiatives often fail, introducing the IT delivery gap and MuleSoft's framework to bridge it. The content emphasizes the importance of an API-led delivery model that supports both producers and consumers. It also outlines common delivery methodologies, best practices from DevOps, and lifecycle stages—design, implementation, and management—within MuleSoft's product-centric approach. Furthermore, it defines the roles and duties of team members typically involved in such projects. |
| トピック 4 | <ul style="list-style-type: none">Recognize and interpret essential integration concepts and terminology: This section evaluates the competency of a Platform Specialist and covers fundamental terms and technical knowledge essential for integration. It includes differentiating cloud service models such as IaaS, PaaS, and SaaS, and the supporting infrastructure such as computing, storage, and scalability principles. The domain further explores network protocols, data formats like XML and JSON, and security concepts in API and enterprise systems. A detailed understanding of HTTP mechanics, RESTful services, and classifications of API types such as GraphQL and AsyncAPI is expected. It also introduces precise terminology necessary for defining API roles and interactions. |

Salesforce Certified MuleSoft Associate 認定 Salesforce-MuleSoft-Associate 試験問題 (Q11-Q16):

質問 # 11

A high-volume eCommerce retailer receives thousands of orders per hour and requires notification of its order management warehouse, and billing systems for subsequent processing within 15 minutes of order submission through its website Which integration technology, when used for its typical and intended purpose, meets the retailer's requirements for this use case?

- A. Managed File Transfer (MFT)
- **B. Publish/Subscribe Messaging Bus (Pub/Sub)**
- C. Extract Transform Load (ETL)
- D. Enterprise Data Warehouse (EDW)

正解: B

解説:

For a high-volume eCommerce retailer requiring real-time or near-real-time notifications to multiple systems, a Publish/Subscribe Messaging Bus is an ideal choice. Here's a detailed explanation:

Publish/Subscribe Model:

Definition: The Pub/Sub messaging model allows messages to be sent (published) by producers and received (subscribed to) by multiple consumers.

Asynchronous Communication: It decouples the sender and receiver, enabling asynchronous communication.

Use Case Fit:

Real-Time Processing: Suitable for scenarios requiring real-time or near-real-time data processing and notification.

Scalability: Handles high volumes of messages efficiently, making it suitable for environments with thousands of transactions per hour.

Implementation:

Message Broker: A message broker (e.g., Apache Kafka, RabbitMQ) can manage the distribution of messages to the order management, warehouse, and billing systems.

Guaranteed Delivery: Ensures that messages are reliably delivered to all subscribed systems within the required time frame.

Pub/Sub Messaging: Understanding Publish/Subscribe Messaging

High-Volume Data Processing: Apache Kafka Use Cases

質問 # 12

CloudHub is an example of which cloud computing service model?

- A. Software as a Service (SaaS)
- B. Monitoring as a Service (MaaS)
- **C. Platform as a Service (PaaS)**
- D. Infrastructure as a Service (IaaS)

正解: C

解説:

CloudHub is MuleSoft's integration platform as a service (iPaaS) offering. It provides a platform for deploying and managing integration applications in the cloud. Here's a detailed explanation:

Platform as a Service (PaaS):

Definition: PaaS provides a cloud-based environment with everything required to support the complete lifecycle of building and deploying web applications and services without the complexity of managing the underlying hardware and software layers.

CloudHub Features:

Deployment: Simplifies the deployment of Mule applications to the cloud.

Management: Provides tools for managing application performance, scaling, and monitoring.

Connectivity: Offers out-of-the-box connectors and integration capabilities for various systems and services.

Benefits:

Scalability: Automatically scales applications based on demand.

Availability: Ensures high availability and reliability with built-in disaster recovery and failover capabilities.

Security: Provides robust security features to protect data and applications.

MuleSoft Documentation: CloudHub

Cloud Computing Models: PaaS Overview

質問 # 13

Which Anypoint Platform component should a MuleSoft developer use to create an API specification prior to building the API implementation?

- **A. API Designer**
- B. Runtime Manager
- C. MUnit
- D. API Manager

正解: A

解説:

Creating an API specification before building the API implementation is a critical step in API development. MuleSoft's API Designer

is the tool designed for this purpose. Here's a detailed explanation:

API Designer:

Purpose: API Designer is a web-based tool within Anypoint Platform that allows developers to design, document, and test APIs.

Features:

Specification Languages: Supports RAML and OAS (OpenAPI Specification) for defining APIs.

Interactive Editing: Provides a graphical and text-based interface to design API specifications interactively.

Mocking Service: Allows developers to create mock services to simulate API behavior before the actual implementation.

Process:

Define API: Use API Designer to create a detailed API specification, including endpoints, methods, request/response schemas, and security schemes.

Documentation: Automatically generate API documentation that can be shared with stakeholders.

Testing: Test the API design using the built-in mocking service to ensure it meets requirements.

MuleSoft Documentation: API Designer

API Design Best Practices: Designing APIs

質問 # 14

According to MuleSoft what is a major distinguishing characteristic of an application network in relation to the integration of systems, data, and devices?

- A. It leverages well-accepted internet standards like HTTP and JSON
- **B. It is built for change and self-service**
- C. It uses a well-organized monolithic approach with standards
- D. It uses CI/CD automation for real-time project delivery

正解: B

解説:

An application network, as envisioned by MuleSoft, is designed to be dynamic and self-service, enabling rapid adaptation to changing business needs. Here's a detailed explanation:

Built for Change:

Flexibility: An application network allows for the easy addition, modification, and removal of services without disrupting existing functionalities.

Modular Architecture: Promotes a modular approach where services and APIs can be independently developed, deployed, and managed.

Self-Service:

Empowerment: Enables different teams (e.g., developers, business units) to access and use APIs and services without heavy reliance on central IT.

API-led Connectivity: Facilitates a self-service model where reusable APIs are available for various teams to integrate and build upon, accelerating innovation and reducing time-to-market.

Characteristics:

Decentralization: Unlike monolithic architectures, an application network supports decentralized development and deployment.

Reusability and Discoverability: Services and APIs are designed to be easily discoverable and reusable across different parts of the organization.

MuleSoft Documentation: Application Networks

API-led Connectivity: MuleSoft API-led Connectivity

質問 # 15

A system administrator needs to determine when permissions were last changed for an Anypoint Platform user.

Which Anypoint Platform component should the administrator use to obtain this information?

- **A. Audit Logging**
- B. Anypoint Studio
- C. Mule Stack Traces
- D. Anypoint Monitoring

正解: A

解説:

Anypoint Platform provides various tools and components for managing and monitoring the platform and its activities. To determine

when permissions were last changed for an Anypoint Platform user, Audit Logging is the appropriate component to use. Here's a detailed explanation:

Audit Logging:

Purpose: Audit logs capture detailed records of user activities and changes within the Anypoint Platform, including permission changes.

Access: Administrators can access audit logs through the Anypoint Platform's management console.

Information Captured:

User Actions: Logs include information about user logins, permission changes, API deployments, and other critical actions.

Timestamp: Each log entry is timestamped, providing the exact time and date when the permissions were changed.

Use Case:

Monitoring and Security: Audit logs are crucial for monitoring platform activities, ensuring compliance, and investigating security incidents.

MuleSoft Documentation: Anypoint Platform Audit Logging
