

ValidTorrent Dumps Save Your Money with Up to one year of Free Updates

Add ValidTorrent's products to cart now! You will have 100% confidence to participate in the exam and disposably pass Fortinet Certification NSE5_SSE_AD-7.6 Exam. At last, you will not regret your choice.

Do you want to prove your ability in IT field? Do you want to get more recognition and employment opportunities? So NSE5_SSE_AD-7.6 exam certification will be an important evidence to prove yourself. Almost all those who are working in the IT field know how important to get NSE5_SSE_AD-7.6 exam certification. As we know, everyone's energy is limited, if you want to pass the important NSE5_SSE_AD-7.6 Certification Exam in such short time, the exam software provided by our ValidTorrent will be a good helper for your preparation for the exam. The complete questions and exam software created in accordance with the laws of the people's memory will help you succeed in the NSE5_SSE_AD-7.6 exam.

Exam NSE5_SSE_AD-7.6 Review - Reliable NSE5_SSE_AD-7.6 Exam Answers

The NSE5_SSE_AD-7.6 exam solutions is in use by a lot of customers currently and they are preparing for their best future on daily basis. Even the students who used it in the past for the preparation of NSE5_SSE_AD-7.6 certification exam have rated our product as one of the best. Candidates of the NSE5_SSE_AD-7.6 exam receive updates till 1 year after their purchase and there is a 24/7 available support system for them that assist them whenever they are stuck in any problem or issues. This product is a complete package and a blessing for people who want to pass the NSE5_SSE_AD-7.6 Exam on the first attempt. Try a free demo if you are interested in the checking features of the product.

Fortinet NSE5_SSE_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Secure Internet Access (SIA) and Secure SaaS Access (SSA): This section focuses on implementing security profiles for content inspection and deploying compliance rules to managed endpoints.
Topic 2	<ul style="list-style-type: none"> SASE Deployment: This domain covers FortiSASE administration settings, user onboarding methods, and integration with SD-WAN infrastructure.
Topic 3	<ul style="list-style-type: none"> Rules and Routing: This section addresses configuring SD-WAN rules and routing policies to control and direct traffic flow across different links.
Topic 4	<ul style="list-style-type: none"> Decentralized SD-WAN: This domain covers basic SD-WAN implementation including configuring members, zones, and performance SLAs to monitor network quality.
Topic 5	<ul style="list-style-type: none"> Analytics: This domain covers analyzing SD-WAN and FortiSASE logs to monitor traffic behavior, identify security threats, and generate reports.

Fortinet NSE 5 - FortiSASE and SD-WAN 7.6 Core Administrator Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which statement is true about FortiSASE supported deployment?

- A. FortiSASE supports both Endpoint mode and SWG mode, depending on deployment.**
- B. FortiSASE operates only in SWG mode, where all traffic is forced through FortiSASE POPs.
- C. FortiSASE supports VPN mode and Agentless mode, based on user requirements.
- D. FortiSASE relies on ZTNA-only mode, which replaces SWG and endpoint functions.

Answer: A

Explanation:

According to the FortiSASE 7.6 Administration Guide and the FCP - FortiSASE 24/25 Administrator curriculum, FortiSASE is designed with a hybrid deployment architecture to support various user and device requirements. It primarily operates in two modes:

* **Endpoint Mode (Agent-based):** This mode requires the installation of FortiClient on the user's laptop or device. The agent establishes an "always-up" secure VPN tunnel to the nearest FortiSASE Point of Presence (PoP), providing full Secure Internet Access (SIA), Secure Private Access (SPA), and endpoint posture checks (ZTNA).

* **Secure Web Gateway (SWG) Mode (Agentless):** This mode is used for users or devices where installing an agent is not feasible (e.g., unmanaged devices or Chromebooks). It relies on explicit web proxy settings or a PAC (Proxy Auto-Configuration) file to redirect web traffic (HTTP/HTTPS) to the SASE PoP for inspection.

Why other options are incorrect:

* **Option A:** While it supports VPN, "VPN mode" is not the formal name of the deployment type; it is "Endpoint mode".

* **Option C:** FortiSASE is not limited to SWG; it is a full SSE (Security Service Edge) solution including FWaaS and ZTNA.

* Option D: ZTNA is a capability within the platform, not a replacement for the overall endpoint or SWG functions.

NEW QUESTION # 25

Refer to the exhibit, which shows the SD-WAN rule status and configuration.

Based on the exhibit, which change in the measured latency will first make HUB1-VPN3 the new preferred member?

- A. When HUB1-VPN3 has a lower latency than HUB1-VPN1 and HUB1-VPN2
- B. When HUB1-VPN3 has a latency of 90 ms
- C. When HUB1-VPN3 has a latency of 80 ms
- D. When HUB1-VPN1 has a latency of 200 ms

Answer: C

Explanation:

If VPN3 latency drops to 80 ms (below threshold), while VPN2 is already over threshold, and if VPN1 later exceeds threshold, VPN3 becomes eligible and preferred.

NEW QUESTION # 26

Which secure internet access (SIA) use case minimizes individual endpoint configuration?

- A. SIA using ZTNA
- B. SIA for FortiClient agent remote users
- C. Site-based remote user internet access
- D. Agentless remote user internet access

Answer: D

Explanation:

Agentless remote user internet access uses an explicit proxy PAC file, which minimizes configuration on individual endpoints because no FortiClient agent installation or per-device setup is required.

NEW QUESTION # 27

Which statement about security posture tags in FortiSASE is correct?

- A. Only one tag can be assigned to an endpoint.
- B. Tags are static and do not change with endpoint status.
- C. Multiple tags can be assigned to an endpoint and used for evaluation.
- D. Multiple tags can be assigned to an endpoint, but only one is used for evaluation.

Answer: C

Explanation:

Security posture tags in FortiSASE dynamically assess endpoint compliance based on rules like OS version, antivirus status, and FortiClient connectivity. Endpoints receive multiple tags simultaneously (e.g., for Windows 11, active AV, and SASE connection), which firewalls then evaluate in policies for ZTNA access control.

NEW QUESTION # 28

Refer to the exhibits.

Two SD-WAN event logs, the member status, the SD-WAN rule configuration, and the health-check configuration for a FortiGate device are shown. Immediately after the log messages are displayed, how will the FortiGate steer the traffic based on the information shown in the exhibits? (Choose one answer)

- A. FortiGate uses port2 to steer the traffic for SD-WAN rule ID 1.
- B. FortiGate uses port1 or port2 to steer the traffic for SD-WAN rule ID 1.
- C. FortiGate skips SD-WAN rule ID 1.
- D. FortiGate uses port1 to steer the traffic for SD-WAN rule ID 1.

Answer: A

Explanation:

According to the SD-WAN 7.6 Core Administrator curriculum and the provided exhibits, the traffic steering decision is determined by the interaction between the Lowest Cost (SLA) strategy and the link health status reported in the event logs.

Rule Strategy (Lowest Cost SLA): The SD-WAN rule configuration for ID 1 (named Critical-DIA) is set to mode sla. In this mode, the FortiGate will only steer traffic through member interfaces that satisfy the assigned Performance SLA targets.

Member Preference: The rule defines priority-members 1 2. This means that under normal conditions (where both links are healthy), Member 1 (port1) is the preferred interface because it is listed first.

Event Log Analysis:

The first log message explicitly states: "Member status changed. Member out-of-sla." for Member 1. This indicates that port1 has exceeded one of the thresholds (latency, jitter, or packet loss) defined in the Corp_HC health check.

The second log confirms: "Number of pass member changed. New Value: 1, Old Value: 2". This verifies that while there were previously two links passing the SLA, now only one link (Member 2/port2) remains in a passing state.

Steering Decision: Because the rule strategy is mode sla and the primary preferred member (port1) is now out-of-sla, the FortiGate immediately disqualifies Member 1 from the selection pool for this specific rule. It then moves to the next available member in the priority list that does satisfy the SLA, which is Member 2 (port2).

Why other options are incorrect:

Option A: FortiGate will not load balance or choose between both links because port1 is currently ineligible due to the SLA failure.

Option B: Steering to port1 would violate the "Lowest Cost (SLA)" rule logic, as that link is no longer meeting the required health standards.

Option D: FortiGate does not "skip" the rule unless no members meet the SLA and there is no fallback configured; in this scenario, port2 is still passing and available.

NEW QUESTION # 29

.....

Competition has a catalytic effect on human development and social progress. Competition will give us direct goals that can inspire our potential and give us a lot of pressure. We must translate these pressures into motivation for progress. This road may not be easy to go. But with our NSE5_SSE_AD-7.6 Exam Questions, you can be the most competitive genius in your field with the least time and efforts. As long as you follow with our NSE5_SSE_AD-7.6 study guide, you will succeed for sure. Just come and try our NSE5_SSE_AD-7.6 practice braindumps!
