SnowPro Core Exam Practice Questions Part 2 - Questions With Solutions

Which of the following actions cannot be performed by the consumer of a shared database? ✓ Ans - Create a new table in a shared database, insert data in a shared table

Which function is used to find the query id of the last executed query? ✓ Ans - SELECT last_query_id()

Which of the following is true regarding how SF stores its data?

1. SF stores table data as simple comma separated files in cloud based storage
2. SF uses its own proprietary columnar format to store table data
3. SF uses parquet file format to store the table data ✓ Ans - SF uses its own proprietary columnar format to store table data

SF patch releases are applied to all accounts at the same time ✓ Ans - True - patch releases are applied to all accounts at the same time; the staged released process is only used for new software releases

You increased the size of a virtual warehouse to improve performance of a query. What is this an example of? ✓ Ans - Scale Up - Increasing the size of a virtual warehouse will enable faster processing for queries but will not necessarily accommodate more queries and more users

What is the SF recommended approach to identifying the minimum and maximum values for a multi cluster virtual warehouse? ✓ Ans - 1. Track the virtual warehouse usage over time and adjust the minimum and maximum values that provide the best configuration for your workload
2. Start with a minimum of 1 & a maximum cluster value of 2 or 3
3. Start with the multi cluster virtual warehouse in auto scale mode

T/F - There is a cost associated with maintaining the partitions associated with the clustering keys ✓ Ans - True - SF credits are used to organize the data into correct partitions as it is added to the table

Snowflake SnowPro® Core Certification (COF-C03) Sample Questions (Q116-Q121):

NEW QUESTION # 116

How would a user run a multi-cluster warehouse in maximized mode?

- A. Set the minimum clusters and maximum clusters settings to different values.
- B. Turn on the additional clusters manually after starting the warehouse.
- C. Configure the maximum clusters setting to "Maximum."
- **D. Set the minimum Clusters and maximum Clusters settings to the same value.**

Answer: D

Explanation:

To run a multi-cluster warehouse in maximized mode, a user should set the minimum and maximum number of clusters to the same value. This ensures that all clusters are available when the warehouse is started, providing maximum resources for query execution. References: Snowflake Documentation².

NEW QUESTION # 117

Credit charges for Snowflake virtual warehouses are calculated based on which of the following considerations? (Choose two.)

- **A. The length of time the warehouse is running**
- **B. The size of the virtual warehouse**
- C. The duration of the queries that are executed
- D. The number of active users assigned to the warehouse
- E. The number of queries executed

Answer: A,B

Explanation:

Credit charges for Snowflake virtual warehouses are calculated based on the size of the virtual warehouse and the length of time the warehouse is running. The size determines the compute resources available, and charges are incurred for the time these resources are utilized.

NEW QUESTION # 118

Which data type can be used for floating-point numbers without losing precision?

- A. BINARY
- B. VARIANT
- C. INTEGER
- **D. DOUBLE**

Answer: D

Explanation:

In Snowflake, the DOUBLE data type is used for floating-point numbers and can represent a wide range of values without losing precision. This data type is ideal for storing numerical values that require decimal precision.

Define the Column: When creating a table, specify the column with the DOUBLE data type to store floating-point numbers.

```
CREATE TABLE example_table (  
  id INTEGER,  
  value DOUBLE  
);
```

Insert Data: Insert floating-point numbers into the DOUBLE column.

INSERT INTO example_table (id, value) VALUES (1, 123.456);

NEW QUESTION # 119

Which of the following are benefits of micro-partitioning? (Select TWO)

- A. Micro-partitions can reduce the amount of I/O from object storage to virtual warehouses
- B. Micro-partitions are immutable objects that support the use of Time Travel.
- C. Micro-partitions cannot overlap in their range of values
- D. Micro-partitions can be defined on a schema-by-schema basis
- E. Rows are automatically stored in sorted order within micro-partitions

Answer: A,B

Explanation:

Micro-partitions in Snowflake are immutable objects, which means once they are written, they cannot be modified. This immutability supports the use of Time Travel, allowing users to access historical data within a defined period. Additionally, micro-partitions can significantly reduce the amount of I/O from object storage to virtual warehouses. This is because Snowflake's query optimizer can skip over micro-partitions that do not contain relevant data for a query, thus reducing the amount of data that needs to be scanned and transferred.

NEW QUESTION # 120

A user wants to access stored in a stage without authenticating into Snowflake.

Which type of URL should be used?

- A. Pre-signed URL
- B. Staged URL
- C. Scoped URL
- D. File URL

Answer: A

Explanation:

A pre-signed URL provides a way to access objects stored in a stage without requiring authentication to Snowflake. This URL contains all the necessary information for access control, including an expiration time, and it's signed by the service's credentials. This mechanism allows users or applications to access specific files stored in a cloud storage location (stage) directly, bypassing the need to authenticate into Snowflake, ensuring secure and temporary access to the data.
