Valid PL-300 Exam Guide | PL-300 Valid Test Vce Free

As we all know, office workers have very little time to prepare for examinations. It would be too painful to waste precious rest time on the subject. But if they have PL-300 practice materials, things will become different. Our PL-300 study materials not only include key core knowledge, but also allow you to use scattered time to learn, so that you can learn more easily and achieve a multiplier effect. And after you study with our PL-300 Exam Questions for 20 to 30 hours, you will be able to pass the PL-300 exam for sure.

Microsoft Power BI Data Analyst Sample Questions (Q112-Q117):

NEW QUESTION # 112

Drag and Drop Question

You are modeling data in table named SalesDetail by using Microsoft Power BI.

You need to provide end users with access to the summary statistics about the SalesDetail data.

The users require insights on the completeness of the data and the value distributions.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Step 1: Create a blank query as a data source

Start with a New Source in Power Query Editor, and then Blank Query.

Create a parameter that use a query for suggested values.

Step 2: Specify the following query, then close and apply. -Table.Profile(#"SalesDetail") In the new blank query, in the formula bar (if you don't see the formula bar, check the formula bar option in the View tab of the Power Query Editor), type below expression: =Table.Profile()

Note that this code is not complete yet, we need to provide a table as the input of this function.

Note: The Table.Profile() function takes a value of type table and returns a table that displays, for each column in the original table, the minimum, maximum, average, standard deviation, count of values, count of null values and count of distinct values.

Step 3: Create a visual for the query table.

The profiling data that you get from Table.Profile function is like below;

After loading the data into Power BI, you'll have the table with all columns, and it can be used in any visuals.

NEW QUESTION # 113

You have a Power BI model that contains a table named Sales. Sales has the following three measures:

A measure named Total Sales Last Year that displays the sales from the previous calendar year. The current value is 32.89 million.

A measure named Total Sales This Year that displays the sales from the current calendar year. The current value is 11.69 million.

A measure named Total Sales Difference that uses a DAX formula of Sales[Last Year] - Sales[This Year].

You need to create the following visualization.

How should you configure the visualization? To answer, drag the appropriate measures to the correct fields. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 114

Hotspot Question

You open powerbi.com as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 115

Hotspot Question

You have an API that returns more than 100 columns. The following is a sample of column names.

client_notified_timestamp

client_notified_source

client_notified_sourceid

client_notified_value

client_responded_timestamp

client_responded_source

client_responded_sourceid

client_responded_value

You plan to include only a subset of the returned columns.

You need to remove any columns that have a suffix of `sourceid`.

How should you complete the Power Query M code? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: `Table.RemoveColumns`

When you do "Remove Columns" Power Query uses the `Table.RemoveColumns` function

Box 2: `List.Select` Get a list of columns.

Box 3: `Text.EndsWith`

NEW QUESTION # 116

Your organization has a team of power users who recently created 20 Power BI dashboards.

The power users share the dashboards with other users in the organization.

When the users attempt to access the dashboards, they receive the error message shown in the exhibit. (Click the Exhibit.)

You need to ensure that all the users can access the dashboards.

What should you do first?

- A. From the properties of each dashboard, modify the Share dashboard settings.
- B. From the Power BI Admin portal, modify the Privacy Settings.
- C. **From the Microsoft Office 365 Admin center, and the Power BI (free) subscription, and then assign a license to each user.**
- D. Instruct each user to install Microsoft Office 2016.

Answer: C

NEW QUESTION # 117

.....
