Administer, Extend, and Automate Salesforce latest practice pdf & ADX-211 free study torrent

Our ADX-211 preparation practice are highly targeted and have a high hit rate, there are a lot of learning skills and key points in the exam, even if your study time is very short, you can also improve your ADX-211 exam scores very quickly. Even if you have a

week foundation, I believe that you will get the certification by using our ADX-211 Study Materials. We can claim that with our ADX-211 practice engine for 20 to 30 hours, you will be ready to pass the exam with confidence.

Salesforce ADX-211 certification is a valuable credential for experienced Salesforce administrators looking to enhance their skills and advance their careers. ADX-211 exam covers a wide range of topics related to administering, extending, and automating Salesforce, and passing it demonstrates a deep understanding of the platform and the ability to manage complex business processes. Candidates who pass ADX-211 exam can expect to have better career opportunities and higher salaries.

Salesforce ADX-211 is an exam designed to validate the knowledge and skills of professionals who are responsible for administering, extending, and automating Salesforce solutions. ADX-211 exam is designed for individuals who have experience working as a Salesforce administrator or developer and are looking to enhance their expertise in the platform.

Salesforce Administer, Extend, and Automate Salesforce Sample Questions (Q19-Q24):

NEW QUESTION # 19

Universal Containers has a requirement to report on opportunities where the probability has dropped beneath 50%. The administrator has created a custom checkbox as a way to identify these records.
What else should the administrator do to meet this requirement? * (1 Point)

- A. Create an approval process that submits the opportunity for approval when the custom checkbox is true
- B. Build a validation rule that displays an error
- C. Create a workflow rule that updates the field when the probability drops below 50%
- D. Enable field history tracking on the field and include the history in the report filter

Answer: C

NEW QUESTION # 20

AW Computing wants to embed a report chart on the Account record page that shows the value of closed sales for that account. The chart should be limited to users in the Sales Manager role on the Account record pages.
how should this be accomplished?

- A. Filter component visibility for the Sales Manager role.
- B. Create a new page layout for the Sales Manager role.
- C. Create a new report and assign it to the component.
- D. Filter component visibility for the Account ID.

Answer: D

Explanation:
To embed a report chart on a record page, you need to use a lightning component that displays report charts. You can filter the component visibility by setting conditions based on record fields, user attributes, or device type. In this case, you can filter the component visibility by matching the Account ID field on the report chart with the Account ID field on the record page. This will ensure that only the relevant data for that account is shown on the chart. Reference: https://help.salesforce.com/s/articleView?id=sf.reports_embed_chart_lightning.htm&type=5 https://help.salesforce.com/s/articleView?id=sf.app_builder_set_component_visibility.htm&type=5

NEW QUESTION # 21

A user at Cloud Kicks has informed the administrator that they are unable to log in to Salesforce via multi-factor authentication.
Which two area should the administrator review to understand potential root causes?
Choose 2 answers

- A. Identity Verification History
- B. Login History
- C. Setup Audit Trail
- D. Debug Logs

Answer: A,B

Explanation:
Identity verification history and login history are two areas that the administrator can review to understand potential root causes of multi-factor authentication issues. Identity verification history shows the methods and results of identity verification attempts for a user, such as email verification, SMS verification, or app verification. Login history shows the status, source, and location of login attempts for a user, as well as any login errors or challenges that occurred. These two areas can help the administrator identify if the user entered the correct verification code, if the user's device or app is compatible with multi-factor authentication, or if there are any network or security issues that prevent successful verification. Reference: https://help.salesforce.com/s/articleView?id=sf.identity_verification_history.htm&type=5 https://help.salesforce.com/s/articleView?id=sf.monitoring_login_history.htm&type=5

NEW QUESTION # 22
Cloud Kicks has created a new flow that deletes records.
What should the administrator consider when testing the flow?

- A. Flows with delete elements cannot be debugged by the Flow debugged tool.
- B. Even if the flow is inactive, debugging the flow will delete the test record.
- C. Flow with delete elements need to ne inactivate to ensure that the test record is not actually deleted.
- D. Record deleted by Flow when debugging are hard deleted.

Answer: B

Explanation:
Debugging a flow allows administrators to test how a flow behaves before activating it or making changes to it. Debugging a flow runs it in real time using test data provided by the administrator or default values from the flow. However, debugging a flow also performs any actions defined in the flow, such as creating, updating, or deleting records. Therefore, if a flow has a delete element that deletes a record based on certain criteria, debugging the flow will delete the test record even if the flow is inactive. Reference: https://help.salesforce.com/s/articleView?id=sf.flow_debug.htm&type=5

NEW QUESTION # 23
Cloud Kicks has been tracking how many participants wear the company's shoes in each marathon. The administrator creates two custom objects: Races and Runners. There is a master-detail relationship between them as well as a Roll-up Summary field on the Races object to show the count of runners in each race. Requirements have changed, and the administrator wants to delete the Master-detail Relationship field without deleting the Runners records.
What action should an administrator take before the Relationship field can be deleted?

- A. Uncheck 'Delete this record also' to turn off cascading deletes.
- B. Select the Allow Reparenting' checkbox on the Master-detail field.
- C. Delete the Roll-up Summary field on the parent.
- D. Change the field type to a Lookup Relationship.

Answer: D

Explanation:
Changing the field type to a Lookup Relationship will allow deleting the Relationship field without deleting the Runners records. A lookup relationship creates a loose association between two objects, where the child records do not depend on the parent records for their existence. A lookup relationship can be deleted without affecting the child records, unlike a master-detail relationship that enforces cascading deletes.
