Test CloudSec-Pro Study Guide & Latest CloudSec-Pro Test Format

Because of the different habits and personal devices, requirements for the version of our CloudSec-Pro exam questions vary from person to person. To address this issue, our CloudSec-Pro actual exam offers three different versions for users to choose from. The PC version is the closest to the real test environment, which is an excellent choice for windows - equipped computers. And this

version also helps establish the confidence of the candidates when they attend the CloudSec-Pro Exam after practicing.

Palo Alto Networks Cloud Security Professional Sample Questions (Q87-Q92):

NEW QUESTION # 87

Which three steps are involved in onboarding an account for Data Security? (Choose three.)

- A. Create a Cloudtrail with SNS Topic
- B. Enable Flow Logs
- C. Create a read-only role with in-line policies
- D. Create a S3 bucket
- E. Enter the RoleARN and SNSARN

Answer: A,D,E

Explanation:

Onboarding an account for Data Security involves several critical steps to ensure comprehensive coverage and effective monitoring. The steps involved include B. Create a Cloudtrail with SNS Topic to track and manage API calls and relevant notifications, D. Enter the RoleARN and SNSARN to provide necessary access and integration points for data security functions, and E. Create a S3 bucket which serves as a storage solution for logging and data capture essential for security analysis.

NEW QUESTION # 88

Given the following audit event activity snippet:

Which RQL will be triggered by the audit event?

- A)
- B)
- C)
- D)

- A. Option D
- B. Option A
- C. Option B
- D. Option C

Answer: A

NEW QUESTION # 89

Which two offerings will scan container images in Jenkins pipelines? (Choose two.)

- A. Twistcli
- B. Compute Jenkins plugin
- C. Compute Azure DevOps plugin
- D. Jenkins Docker plugin
- E. Prisma Cloud Visual Studio Code plugin with Jenkins integration

Answer: A,B

Explanation:

https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/continuous_integration/jenkins_plugin.html

https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/continuous_integration/jenkins_pipeline_project

To scan container images in Jenkins pipelines, Prisma Cloud offers two specific tools:

* D. Twistcli: This is a command-line interface tool provided by Prisma Cloud that allows users to scan container images for vulnerabilities and compliance issues. It can be integrated into Jenkins pipelines to automate the scanning process as part of the CI/CD workflow.

* E. Compute Jenkins plugin: This plugin integrates Prisma Cloud's capabilities directly into Jenkins, enabling automated scanning of

container images during the build process. It provides a seamless way to include security checks within the Jenkins pipeline¹. Both Twistcli and the Compute Jenkins plugin are designed to work within the Jenkins environment to ensure that container images are scanned for security risks before they are deployed. By integrating these tools into the pipeline, developers can identify and address vulnerabilities early in the development cycle, contributing to a more secure software delivery process

NEW QUESTION # 90

Which type of query is used for scanning Infrastructure as Code (IaC) templates?

- A. API
- B. XML
- C. RQL
- **D. JSON**

Answer: D

Explanation:

NEW QUESTION # 91

Taking which action will automatically enable all severity levels?

- **A. Navigate to Policies > Settings and ensure all severity levels are checked under "auto-enable default policies."**
- B. Navigate to Policies > Settings and enable all severity levels in the alarm center.
- C. Navigate to Settings > Enterprise Settings and ensure all severity levels are checked under "auto-enable default policies."
- D. Navigate to Settings > Enterprise Settings and enable all severity levels in the alarm center.

Answer: A

Explanation:

In Prisma Cloud, to automatically enable all severity levels for alerts, a user would need to navigate to the Policies section, then to Settings. Within this area, there is an option for "auto-enable default policies," which, when checked for all severity levels, ensures that any default policies related to those severities are automatically activated. This is a configuration setting that streamlines the alerting process by ensuring that all relevant severity levels are covered by the default policies without the need for manual intervention.

<https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/prisma-cloud-policies/manage-prisma-cloud-policies>
Step 1- To enable global settings for Prisma Cloud default policies click "Settings" and select "Enterprise Settings" Step 2- To enable policies based on severity, select Auto enable new default policies of the type- Critical, High, Medium, Low or Informational.

NEW QUESTION # 92

.....

To help you pass Palo Alto Networks certification exam is the recognition of our best efforts. In order to achieve this goal, our IT experts and certified trainers have focused on the DumpsReview CloudSec-Pro vce dumps with their rich experience and constantly keep the updating our CloudSec-Pro Study Materials to ensure the accuracy of exam questions and answers. There are 24/7 customer assisting to support you if you have any questions.
