

Fast Download Valid SOA-C02 Practice Materials & Correct Amazon Certification Training - Marvelous Amazon AWS Certified SysOps Administrator - Associate (SOA-C02)

A Comprehensive Guide to SOA-C02 Practice Questions and Answers

Are you gearing up to take the AWS Certified SysOps Administrator - Associate (SOA-C02) exam? If so, you are in the proper location. More than just academic proficiency is needed to succeed on this difficult certification exam; instead, advance preparation is required. In this article, we'll explore the vital role that [SOA-C02 practice questions](#) play in your journey to AWS certification success.

The Importance of Practice Questions:SOA-C02 practice questions are invaluable tools for several reasons. They mimic the format and style of the actual exam, providing a realistic testing experience. Moreover, they allow you to assess your current knowledge, identify weak areas, and track your progress over time.

Choosing the Right Practice Questions:Not all practice questions are created equal. It's essential to select reputable sources that offer up-to-date, relevant, and accurate questions. We'll discuss some trusted platforms and resources for accessing SOA-C02 practice questions.

Incorporating Practice Questions into Your Study Plan:To make the most of SOA-C02 practice questions, you need a structured study plan. We'll outline a step-by-step approach to effectively integrate these questions into your preparation routine.

P.S. Free 2026 Amazon SOA-C02 dumps are available on Google Drive shared by NewPassLeader:
https://drive.google.com/open?id=1r1vv_hKEqhZPJH5B4h_9ch23UGcSZzc

These Amazon SOA-C02 questions can be customized by the user according to their needs. This customization feature so that customers can adjust the time as they want. They can change the settings of the time and questions as per need while giving the Amazon SOA-C02 tests. These Amazon SOA-C02 exam questions train candidates to maintain discipline so that they can solve the real Amazon SOA-C02 questions on time while giving their final SOA-C02 exam.

The AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) Desktop-based practice Exam is ideal for applicants who don't have access to the internet all the time. You can use this AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) simulation software without an active internet connection. This SOA-C02 software runs only on Windows computers. Both practice tests of NewPassLeader i.e. web-based and desktop are customizable, mimic Amazon SOA-C02 real exam scenarios, provide results instantly, and help to overcome mistakes.

100% Pass Quiz 2026 Latest Amazon Valid SOA-C02 Practice Materials

With these real SOA-C02 Questions, you can prepare for the test while sitting on a couch in your lounge. Whether you are at home or traveling anywhere, you can do SOA-C02 exam preparation with our Amazon SOA-C02 dumps. SOA-C02 test candidates with different learning needs can use our three formats to meet their needs and prepare for the Amazon SOA-C02 test successfully in one go. Read on to check out the features of these three formats.

One of the primary benefits of obtaining the SOA-C02 Certification is that it validates an individual's expertise in deploying and managing applications on the AWS cloud platform. AWS Certified SysOps Administrator - Associate (SOA-C02) certification exam covers a broad range of topics, including AWS services, automation, and security, which are essential skills for any IT professional working with AWS. Additionally, obtaining this certification can help individuals stand out in the job market and increase their earning potential.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q346-Q351):

NEW QUESTION # 346

A company has an application that collects notifications from thousands of alarm systems. The notifications include alarm notifications and information notifications. The information notifications include the system arming processes, disarming processes, and sensor status.

All notifications are kept as messages in an Amazon Simple Queue Service (Amazon SQS) queue. Amazon EC2 instances that are in an Auto Scaling group process the messages. A SysOps administrator needs to implement a solution that prioritizes alarm notifications over information notifications.

Which solution will meet these requirements?

- **A. Create a queue for alarm notifications and a queue for information notifications. Update the application to collect messages from the alarm notifications queue first.**
- B. Add an Amazon DynamoDB stream to accelerate the message processing
- C. Adjust the Auto Scaling group to scale faster when a high number of messages is in the queue.
- D. Use the Amazon Simple Notification Service (Amazon SNS) fanout feature with Amazon SQS to send the notifications in parallel to all the C2 instances

Answer: A

Explanation:

By creating separate SQS queues for alarm notifications and information notifications and then updating the application to process messages from the alarm notifications queue first, the solution ensures that high-priority alarm messages are processed before lower-priority information messages. This approach meets the requirement with minimal changes to the existing architecture.

NEW QUESTION # 347

A global company handles a large amount of personally identifiable information (PII) through an internal web portal. The company's application runs in a corporate data center that is connected to AWS through an AWS Direct Connect connection. The application stores the PII in Amazon S3. According to a compliance requirement, traffic from the web portal to Amazon S3 must not travel across the internet.

What should a SysOps administrator do to meet the compliance requirement?

- A. Modify the application to use the S3 path-style endpoint.
- B. Configure AWS Network Firewall to redirect traffic to the internal S3 address.
- **C. Provision an interface VPC endpoint for Amazon S3. Modify the application to use the interface endpoint.**
- D. Set up a range of VPC network ACLs to redirect traffic to the Internal S3 address.

Answer: C

Explanation:

Using the interface endpoint, applications in your on-premises data center can easily query S3 buckets over AWS Direct Connect or Site-to-Site VPN. <https://aws.amazon.com/blogs/architecture/choosing-your-vpc-endpoint-strategy-for-amazon-s3/>

NEW QUESTION # 348

A company needs to launch a public website. The company will deploy the website on Amazon EC2 instances that are in an Auto Scaling group. The Auto Scaling group extends across multiple Availability Zones.

- A. Create an Amazon CloudFront distribution. Create an internet-facing Application Load Balancer (ALB). Specify the ALB as the distribution's origin. Create an Amazon Route 53 alias record that points to the distribution's DNS name.
- B. Create an Amazon CloudFront distribution. Create an internet-facing Application Load Balancer (ALB). Specify the ALB as the distribution's origin. Enable CloudFront Origin Shield. Add a custom Host header that contains the value "example.com". Create an Amazon Route 53 alias record that points to the distribution's DNS name.
- C. Create an Amazon CloudFront distribution. Create an internal Network Load Balancer (NLB). Specify the NLB as the distribution's origin. Use an AWS WAF rule for host header filtering. Create an Amazon Route 53 alias record that points to the distribution's DNS name.
- D. Create an internet-facing Application Load Balancer (ALB). Create an Amazon Route 53 alias record that points to the ALB's DNS name. Configure an HTTP to HTTPS redirect action for the ALB. On the HTTPS listener, create a host-based rule to forward requests for example.com to the website's target group.

Answer: D

Explanation:

An internet-facing ALB provides a single front end for your Auto Scaling group across multiple AZs.

By configuring the ALB's HTTP listener to redirect all traffic to HTTPS, you ensure the site is always accessed securely over TLS.

A host-based rule on the HTTPS listener that only forwards requests where the Host header matches example.com guarantees that only https://example.com is served (all other hostnames will receive a default 404).

Finally, a Route 53 alias record pointing to the ALB gives you the custom domain without needing to manage certificates yourself on EC2 instances.

NEW QUESTION # 349

A company is running distributed computing software to manage a fleet of 20 Amazon EC2 instances for calculations. The fleet includes 2 control nodes and 18 task nodes to run the calculations. Control nodes can automatically start the task nodes.

Currently, all the nodes run on demand. The control nodes must be available 24 hours a day, 7 days a week. The task nodes run for 4 hours each day. A SysOps administrator needs to optimize the cost of this solution.

Which combination of actions will meet these requirements? (Choose two.)

- A. Use Spot Instances for the task nodes.
Use On-Demand Instances if there is no Spot availability.
- B. Use Dedicated Hosts for the control nodes.
- C. Use Reserved Instances for the task nodes.
- D. Purchase EC2 Instance Savings Plans for the control nodes.
- E. Use Spot Instances for the control nodes.
Use On-Demand Instances if there is no Spot availability.

Answer: A,D

Explanation:

It asks for the most cost effective solution, EC2 instance savings plan is a better option than reserved instance.

NEW QUESTION # 350

A user working in the Amazon EC2 console increased the size of an Amazon Elastic Block Store (Amazon EBS) volume attached to an Amazon EC2 Windows instance. The change is not reflected in the file system.

What should a SysOps administrator do to resolve this issue?

- A. Take a snapshot of the EBS volume. Replace the original volume with a volume that is created from the snapshot.
- B. Reattach the EBS volume to the EC2 instance.
- C. Extend the file system with operating system-level tools to use the new storage capacity.
- D. Reboot the EC2 instance that is attached to the EBS volume.

Answer: C

Explanation:

After you increase the size of an EBS volume, use the Windows Disk Management utility or PowerShell to extend the disk size to the new size of the volume. You can begin resizing the file system as soon as the volume enters the optimizing state.
