Salesforce Health Cloud Accredited Professional certification is focused on the healthcare industry, and professionals who hold this certification are recognized as experts in the field of healthcare technology.

Salesforce Health Cloud Accredited Professional Sample Questions (Q31-Q36):

NEW QUESTION # 31

An agent at a MedTech company requires a UI component that displays customer data and contains a link to create a new order. Once clicked, the link starts a process to build a new order and displays the available products for purchase.

Which three OmniStudio capabilities are required to solve this use case?

Choose 3 answers

- A. DataRaptors
- B. OmniScript
- C. Flexcards
- D. Integration Procedures
- E. Document Generation

Answer: A,B,C

Explanation:

The use case describes:

- * A UI component to display customer data # FlexCards
- * A link to start a process (build a new order) # OmniScript
- * Retrieving and displaying available products # DataRaptors (and often Integration Procedures if orchestration is needed).

Let's map it step by step:

- * D. FlexCards # Used to display contextual customer data on the UI and provide clickable actions (like "Create New Order").
- * E. OmniScript # Guides the user through the order creation process, step by step (product selection, details, confirmation).
- * A. DataRaptors # Extract and load Salesforce data (e.g., retrieving available products, saving the order).

These three are the core capabilities needed.

Why not the others?

- * B. Integration Procedures - Helpful if the solution requires multiple data sources or orchestration, but the question doesn't explicitly state external integration or complex orchestration. If data is all within Salesforce, DataRaptors are enough.
- * C. Document Generation - Used to create documents (PDFs, Word, etc.), which isn't part of this order creation flow.

Salesforce Health Cloud / OmniStudio Reference:

Salesforce OmniStudio Developer Guide

- * "FlexCards present contextual information and actions in a UI component."
- * "Use OmniScripts to guide users through business processes such as creating orders."
- * "DataRaptors retrieve, transform, and save Salesforce data for use in OmniScripts and FlexCards."

NEW QUESTION # 32

A customer wants to view and navigate to critical insurance, clinical, and primary care physician information on a patient's profile. Which Health Cloud capability should a consultant implement?

- A. Advanced Patient Card
- **B. Enhanced Highlights Panel**
- C. Patient Path
- D. Enhanced Timeline

Answer: B

NEW QUESTION # 33

Which of the following capabilities of provide search would a customer service agent use to help prospective and returning patients for the right provider? (Choose three)

- A. Use custom fields defined in any entity within the provider data model in health cloud as part of search experience.
- B. Use provider search in an unauthenticated community page.
- **C. Use custom fields defined in health care provider and health care practitioner facility entities as part of search experience.**
- **D. Connect the list of fields displayed in the search panel and search results.**
- **E. Use provider search in an authenticated community page**

Answer: C,D,E

NEW QUESTION # 34

An external provider wants to get a patient's allergy information from Bloomington Caregivers' Health Cloud system. Which Health Cloud API should a consultant recommend?

- A. Clinical Summary Healthcare API
- B. Patient Healthcare API
- C. AllergyMedication API
- **D. Interoperability API**

Answer: D

Explanation:

To get a patient's allergy information from Bloomington Caregivers' Health Cloud system, an external provider should use the Interoperability API. This API allows external systems to access and exchange clinical data with Health Cloud using FHIR standards. The Interoperability API supports various FHIR resources, including AllergyIntolerance, which represents a patient's allergic or intolerant reaction to a substance. AllergyMedication API, Patient Healthcare API, or Clinical Summary Healthcare API are not APIs that exist in Health Cloud.

NEW QUESTION # 35

Which three terms can aLife Sciences company track about a Care Program using Program Management in Health Cloud? (Choose three)

- **A. The multiple marketing campaigns that enrollees are subjected to as part of the Care Program.**
- B. The clinical indicators that need to be monitored in the Care Program.
- C. The budget & expense of the company's associated Care Program.
- **D. The products that are associated with a given Care Program.**
- **E. The Plans that enrollees have been engaged in as part of the Care Program.**

Answer: A,D,E
