Verified Certified Google-Workspace-Administrator Questions | Easy To Study and Pass Exam at first attempt & Authorized Google-Workspace-Administrator: Google Cloud Certified - Professional Google Workspace Administrator

Our company guarantees this pass rate from various aspects such as content and service on our Google-Workspace-Administrator exam questions. We have hired the most authoritative professionals to compile the content Of the Google-Workspace-Administrator study materials. And we offer 24/7 service online to help you on all kinds of the problems about the Google-Workspace-Administrator learning guide. Of course, we also consider the needs of users, our Google-Workspace-Administrator exam questions

hope to help every user realize their dreams.

Google Cloud Certified - Professional Google Workspace Administrator Sample Questions (Q57-Q62):

NEW QUESTION # 57

Your client is a multinational company with a single email domain. The client has compliance requirements and policies that vary by country. You need to configure the environment so that each country has their own administrator and no administrator can manage another country.

What should you do?

- **A. Create an OU for each country. Create an admin role and assign an admin with that role per OU.**
- B. Create a TeamDrive per OU, and allow only country-specific administration of each folder.
- C. Establish a new Google Workspace tenant with their own admin for each region.
- D. Create Admin Alerts, and use the Security Center to audit whether admins manage countries other than their own.

Answer: A

Explanation:

* Create Organizational Units (OUs):

* In the Google Workspace Admin console, go to "Directory" > "Organizational units".

* Create separate OUs for each country.

* Assign Admin Roles:

* Go to "Admin roles" in the Admin console.

* Create custom admin roles with permissions restricted to managing users, groups, and settings within their specific OU.

* Ensure that the role does not grant permissions to manage other OUs.

* Assign Country-Specific Admins:

* Assign the newly created admin roles to the appropriate administrators, ensuring they have control only over their respective country's OU.

NEW QUESTION # 58

Your organizational policies require that all documents containing personally identifiable information (PII) are labeled as "Sensitive".

You want to scan all files in your corporate Drive and apply the label to all files containing PII. What should you do?

- **A. Create a data protection rule for Drive that automatically applies the label named "Sensitive" to Drive files with PII.**
- B. Enable data classification for your corporate Drive. Create a label named "Sensitive" that is automatically applied to all new files in your domain.
- C. Create a data protection rule for Drive that automatically applies a label named "Sensitive" to new Drive files with PII. and requires users to add a label to previously created files with PII.
- D. Enable data classification for your corporate Drive. Create a label named "Sensitive" that is automatically applied to all new and previously created files in your domain.

Answer: A

NEW QUESTION # 59

Your organization is migrating their current on-premises email solution to Google Workspace. You need to ensure that emails sent to your domain are correctly routed to Gmail. What should you do?

- A. Create a content compliance rule to filter and route incoming emails.
- B. Set up email forwarding from your on-premises email provider to Gmail.
- C. Configure SPF, DKIM, and DMARC records in your current email domain's DNS settings.
- **D. Change the Mail Exchange (MX) records in your current email domain's DNS settings to point to Google's mail servers.**

Answer: D

Explanation:

To ensure that emails sent to your domain are correctly routed to Gmail, you need to update the Mail Exchange (MX) records in your domain's DNS settings to point to Google's mail servers. This is a critical step in the migration process, as it ensures that all incoming email traffic is directed to Google Workspace after the switch.

NEW QUESTION # 60

Your company is streamlining workflows by creating custom applications for tasks like filing expense reports or requesting time off. You need to identify a Google Workspace solution to develop these applications. Your development team has only basic coding knowledge. What should you do?

- A. Direct employees to use Google Forms to collect data and create basic workflows.
- B. Enable Gemini for Workspace. Direct users to use generative AI across Gmail and Drive to simplify the submission of expense reports.
- C. Enable AppScript for your organization and allow employees to build add-ons to existing Workspace solutions.
- **D. Enable AppSheet for your organization.**

Answer: D

Explanation:

The core requirement is to create custom applications for workflows like expense reports and time off, with a development team that has "only basic coding knowledge." This strongly points to a "no-code" or "low-code" platform.

AppSheet is Google's no-code development platform, designed specifically for users (often referred to as "citizen developers") with basic or no coding knowledge to build custom mobile and web applications directly from data sources like Google Sheets, Forms, or other databases. It's ideal for automating business processes and creating custom workflows without traditional programming.

Here's why the other options are less suitable:

* A. Enable Gemini for Workspace. Direct users to use generative AI across Gmail and Drive to simplify the submission of expense reports. Gemini for Workspace (Google's AI assistant) can help with tasks like drafting emails, summarizing documents, and generating content within existing Workspace apps. While it can "simplify" aspects, it is not a platform for developing custom applications with structured workflows and data capture for tasks like full expense report submission or time-off requests. It enhances existing tools, it doesn't build new ones.

* B. Direct employees to use Google Forms to collect data and create basic workflows. Google Forms is excellent for data collection and can be used for very simple workflows (e.g., collecting time-off requests). However, it lacks the robust functionality needed for complex custom applications, such as managing approvals, displaying data in different views, offline access, or integrating with other systems, without significant manual effort or custom scripting. The term "custom applications" suggests something more sophisticated than just a form.

* D. Enable AppScript for your organization and allow employees to build add-ons to existing Workspace solutions. Google Apps Script allows for powerful automation and the creation of custom add-ons for Google Workspace applications (Gmail, Sheets, Docs). However, Apps Script requires knowledge of JavaScript. While it's relatively "basic coding" compared to full-stack development, it's still coding. The question emphasizes "only basic coding knowledge" and the need for a solution to develop applications, implying a more visual or declarative approach than coding from scratch.

AppSheet is generally considered easier for those with "basic coding knowledge" or even no coding knowledge, making it a better fit for rapid application development by non-developers.

References from Google Workspace Administrator:

* AppSheet: No-code App Development | Google Cloud: This is the primary resource for AppSheet, explicitly stating its purpose for "no-code app development" and enabling "everyone in your organization to build and extend applications without coding." It highlights use cases for automating business processes like order approvals (similar to expense reports/time off).

Reference: <https://cloud.google.com/appsheet>

Google AppSheet | Build apps with no code: Further reiterates that AppSheet helps "build powerful applications and automations that boost productivity. No coding required." It also mentions integration with Google Workspace, including Google Sheets and Forms as data sources.

Reference: <https://about.appsheet.com/home/>

Quick start: Build your first app and automation using Google Forms - AppSheet Help: This resource demonstrates how AppSheet can take data from Google Forms and build an app with automation (e.g., email notifications for approvals), showcasing its capability for workflows like expense reports.

NEW QUESTION # 61

You are investigating a potential data breach. You need to see which devices are accessing corporate data and the applications used. What should you do?

- A. Analyze the Google Workspace reporting section of the Admin console.
- B. Analyze the security investigation tool to access device log data.
- **C. Analyze the audit log in the Admin console for device and application activity.**
- D. Analyze the User Accounts section in the Google Admin console.

Answer: C

Explanation:

The audit log in the Google Admin console provides detailed information about device and application activity, which is crucial for investigating a potential data breach. You can see which devices have accessed corporate data, as well as which applications were used, giving you a comprehensive view of any unauthorized or suspicious activities. This is the most appropriate and efficient tool for this investigation.

NEW QUESTION # 62

.....

Similarly, the TestkingPass Google Google-Workspace-Administrator practice test creates an actual exam scenario on each and every step so that you may be well prepared before your actual Google Cloud Certified - Professional Google Workspace Administrator examination time. Hence, it saves you time and money. TestkingPass provides three months of free updates if you purchase the Google Google-Workspace-Administrator Questions and the content of the examination changes after that.
