# Pass Guaranteed Quiz 1Z0-1151-25 - Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Perfect Latest Braindumps Pdf

BONUS!!! Download part of itPass4sure 1Z0-1151-25 dumps for free: https://drive.google.com/open?id=1EU34FZ8Ycp73N_DISXXhTNHwyRmHtJUT

For years our team has built a top-ranking brand with mighty and main which bears a high reputation both at home and abroad. The sales volume of the 1Z0-1151-25 study materials we sell has far exceeded the same industry and favorable rate about our products is approximate to 100%. Why the clients speak highly of our 1Z0-1151-25 Study Materials? Our dedicated service, high quality and passing rate and diversified functions contribute greatly to the high prestige of our products.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.

Topic 2	• Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.
Topic 3	• Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.
Topic 4	• Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.
Topic 5	• Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.

Quiz 2026 The Best Oracle 1Z0-1151-25: Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Latest Braindumps Pdf

It is evident to all that the 1Z0-1151-25 test torrent from our company has a high quality all the time. A lot of people who have bought our products can agree that our 1Z0-1151-25 test questions are very useful for them to get the certification. There have been 99 percent people used our 1Z0-1151-25 Exam Prep that have passed their exam and get the certification. It means that our 1Z0-1151-25 test questions are very useful for all people to achieve their dreams, and the high quality of our 1Z0-1151-25 exam prep is one insurmountable problem.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q45-Q50):

NEW QUESTION # 45
What is required to configure Oracle Interconnect for Google Cloud for ABC Private Limited?

- A. Direct Internet connection
- B. Virtual Circuits on OCI and Partner Interconnects on GCP
- C. Integration with Microsoft Active Directory
- D. A public subnet on both OCI and GCP

Answer: B

Explanation:
Oracle Interconnect for Google Cloud relies on establishing dedicated, private connections between Oracle Cloud Infrastructure (OCI) and Google Cloud Platform (GCP). This is achieved through:
Virtual Circuits on OCI: Oracle FastConnect provides virtual circuits for establishing private connections to other networks, including other cloud providers. This is the OCI side of the connection.
Partner Interconnects on GCP: On the Google Cloud side, Partner Interconnect provides connectivity to Google's network through a supported service provider. This is the GCP side of the connection.
These two components work together to create the end-to-end private connection between OCI and GCP.

Here's why the other options are incorrect:

A). Integration with Microsoft Active Directory: Microsoft Active Directory is relevant for Microsoft Azure environments, not Google Cloud.

B). A public subnet on both OCI and GCP: While public subnets might be used for other purposes, the core of the interconnect relies on private connections established through FastConnect and Partner Interconnect, not public internet connectivity.

C). Direct Internet connection: A direct internet connection does not provide the dedicated bandwidth, low latency, and enhanced security that a private interconnect offers. Oracle Interconnect is specifically designed to avoid using the public internet for this connection.

NEW QUESTION # 46

When setting up the Azure side of the Interconnect connection, which Azure resource is required to connect to the Oracle virtual circuit?

- A. Azure VPN Gateway
- B. Azure ExpressRoute circuit
- C. Azure Virtual Network Gateway
- D. Azure Load Balancer

Answer: B

Explanation:

An Azure ExpressRoute circuit represents the logical connection between your on-premises infrastructure (or, in this case, the Oracle FastConnect connection) and the Microsoft Azure cloud. It's the core component of the ExpressRoute service.

Here's why the other options are incorrect:

b). Azure VPN Gateway: VPN Gateways are used for creating secure connections over the public internet (IPsec VPNs). Oracle Interconnect for Azure uses a dedicated private connection, not a VPN over the internet.

c). Azure Virtual Network Gateway: While a Virtual Network Gateway is a broader term that includes both VPN Gateways and ExpressRoute Gateways, it's not specific enough. You need the ExpressRoute Gateway specifically to connect to an ExpressRoute circuit.

d). Azure Load Balancer: Load Balancers distribute traffic across multiple virtual machines or services. They are not involved in establishing the connectivity between Azure and Oracle Cloud Infrastructure.

NEW QUESTION # 47

Which statement is true for a private offer purchase option?

- A. Consult Oracle Sales to create a private offer in Google Cloud Marketplace.
- B. You must have an OCI account to create a private offer.
- C. Raise a purchase private offer directly from Google Cloud Marketplace.
- D. Consult Oracle Sales to create a private offer in OCI Marketplace.

Answer: A

Explanation:

Private offers are custom pricing and terms negotiated directly between the customer and the vendor (in this case, Oracle). These offers are then made available to the customer through the marketplace.

Here's why the other options are incorrect:

B). Raise a purchase private offer directly from Google Cloud Marketplace: Customers cannot initiate or "raise" a private offer themselves. It's a process initiated by the vendor (Oracle) after discussions with the customer.

C). Consult Oracle Sales to create a private offer in OCI Marketplace: While Oracle might offer private offers in the OCI Marketplace for OCI services, the question is specifically about purchasing Oracle products in the Google Cloud Marketplace. Therefore, this option is irrelevant to the context.

D). You must have an OCI account to create a private offer: The creation of a private offer is handled by Oracle, not the customer. Therefore, having an OCI account is not a prerequisite for the customer to receive a private offer in Google Cloud Marketplace.

NEW QUESTION # 48

What encryption protocol is used to secure data transmission in an OCI Site-to-Site VPN connection?

- A. Secure Sockets Layer (SSL)
- B. Transport Layer Security (TLS)
- C. Internet Protocol Security (IPsec)
- D. Datagram Transport Layer Security (DTLS)

Answer: C

Explanation:
OCI Site-to-Site VPN connections use Internet Protocol Security (IPsec) to secure data transmission, providing encryption and authentication over the tunnel. SSL (Option A) and TLS (Option C) are typically used for web traffic, not VPNs, while DTLS (Option B) is designed for datagram-based applications, not standard VPNs. Oracle's VPN documentation specifies IPsec as the protocol, aligning with industry standards for secure VPNs. The original question incorrectly listed SSL as the answer; IPsec is correct per OCI standards.

NEW QUESTION # 49
Which of the following components is NOT a core part of the Oracle Database@Google Cloud architecture within the Google Cloud environment?

- A. Oracle Exadata Infrastructure
- B. Google Cloud Project and VPC
- C. Google Cloud Router
- D. Google Cloud Storage Buckets directly mounted to Exadata compute nodes.

Answer: D

Explanation:
In Oracle Database@Google Cloud, the Exadata infrastructure is managed within the OCI environment, even though it's physically located in Google Cloud data centers. The Exadata storage servers are part of the Exadata system itself and are not directly connected to Google Cloud Storage buckets. Data transfer between Google Cloud services and the Exadata databases would typically occur over the network connection established by Partner Interconnect and FastConnect, not through direct mounting of storage buckets.
The other options are core parts:
Google Cloud Project and VPC: These are fundamental building blocks of Google Cloud and are used to provide the network environment for applications that connect to the Oracle database.
Google Cloud Router: This is used to manage network traffic within the Google Cloud VPC and facilitate connectivity to external networks, including the connection to OCI.
Oracle Exadata Infrastructure: This is the core database platform, consisting of the Exadata compute and storage servers.

NEW QUESTION # 50
......

Every working person knows that 1Z0-1151-25 is a dominant figure in the field and also helpful for their career. If 1Z0-1151-25 reliable exam bootcamp helps you pass the exams and get a qualification certificate you will obtain a better career even a better life. Our study 1Z0-1151-25 Guide materials cover most of latest real 1Z0-1151-25 test questions and answers. If you are certainly determined to make something different in the field, a useful certification will be a stepping-stone for your career.
