Our Order-Management-Administrator study dumps will be very useful for all people to improve their learning efficiency.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q71-Q76):

NEW QUESTION # 71

An administrator has created a screen flow for users to create accounts. Some users have complained that they do not always have all the required data to create the account and lost progress when they leave the flow. What two steps should the administrator take to prevent lost progress? Choose 2

- **A. Add the paused flows component to the home page**
- B. Ask a developer to create a lightning component to pause the flow
- **C. Enable paused flows in process automation settings in setup**
- D. Add a pause button to the footer of the screen flow

Answer: A,C

NEW QUESTION # 72

Which three steps should an administrator take to set up a mock payment gateway in a new org?

- A. Create a Trusted Site Entry
- **B. Create a Named Credential**
- **C. Create a Payment Provider**
- D. Create a CORS (Cross-Origin Resource Sharing) entry
- **E. Create a Payment Gateway**

Answer: B,C,E

Explanation:

To set up a mock payment gateway in a new org, an administrator should take the following steps:

Create a Payment Provider: This is a custom metadata type that defines the configuration and behavior of a payment gateway. A payment provider specifies the name, type, class, and endpoint of the payment gateway.

Create a Named Credential: This is a Salesforce feature that securely stores authentication information for connecting to external services. A named credential specifies the URL, identity type, authentication protocol, and certificate of the payment gateway.

Create a Payment Gateway: This is a custom object that represents an instance of a payment provider. A payment gateway references a payment provider and a named credential, and defines additional settings such as currency, mode, and timeout.

NEW QUESTION # 73

Which three components can be used to modify the user experience in the Order Summary detail page?

- A. Tabs
- B. Accordion
- C. Related List - Double
- D. Related List-Single

Answer: A,B,D

Explanation:

Three components that can be used to modify the user experience in the Order Summary detail page are:

Tabs. Tabs are a type of component that allow users to switch between different views or subpages on a record page. Tabs can contain other components, such as charts, reports, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize tabs on the Order Summary detail page to give users more options and flexibility.

Accordion. Accordion is a type of component that allow users to expand and collapse sections of a record page. Accordion can contain other components, such as fields, related lists, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize accordion on the Order Summary detail page to give users more control and visibility.

Related List-Single. Related List-Single is a type of component that displays a single related list for a record. A related list is a list of records that are linked to another record by a relationship field, such as lookup or master-detail. The administrator can use the Lightning App Builder to add and customize related list-single on the Order Summary detail page to give users more access and context.

NEW QUESTION # 74

How can an administrator allow an org to publish a change set to another org?

- A. In the target org: Open Deployment Settings, Click Edit next to the source org. Select Allow Inbound Changes and Click Save
- B. In the source org: open Deployment settings, Select the environments to publish to and Move them to the enabled list
- C. In the target org: Open Deployment Settings, Select the environments to allow publishing from and Move them to the Enabled list
- D. In the source org: Open Publish Settings, Select the checkbox next to the environment to publish to and Click Save

Answer: C

Explanation:

The correct way for an administrator to allow an org to publish a change set to another org is to open Deployment Settings in the target org, select the environments to allow publishing from and move them to the Enabled list. This creates a deployment connection between the source org and the target org, which allows the source org to upload change sets to the target org.
