Qlik Sense System Administrator Certification Exam - February 2021 Release Sample Questions (Q39-Q44):

NEW QUESTION # 39

A user creates an app in Qlik Sense Desktop using a database as the data source. The user is able to connect to the database and reload the app with new data. To share the app, the user emails the app QVF file to the system administrator. The administrator imports the app successfully and publishes the app to the Everyone stream in the hub. The administrator creates a task to reload the data in the app every 12 hours. The next day, the user observes that the data has NOT been refreshed in the app. No modifications have been made to the access rights for the data source. What is the likely cause of this issue?

- A. The system administrator does NOT have permission to access the source database
- B. An identically-named data connection with another data source existed prior to the import
- **C. A custom property limits which tables can be accessed from the database**
- D. A security rule prevents the data connection from loading data into the app

Answer: C

NEW QUESTION # 40

The marketing department creates a content library with all company logos and branding images. All business analysts are instructed to use only those images. Business analysts can NOT see these images when they create the apps. What should the system administrator review first to troubleshoot this issue?

- A. Custom properties for the virtual proxy
- B. File permissions in Content folder
- C. Business analyst's browser proxy configuration
- **D. Security rule for the content library**

Answer: D

NEW QUESTION # 41

Imagine a single server environment that has all services running. At some point users report that applications are very slow, all of them. The system administrator works remotely on support and realizes that there is actually a problem occurring. Due to performance issues, the system administrator has difficulties accessing the QMC. Additionally you receive an email stating that the server's memory ram has reached its limit.

What step can the system administrator take to check what is happening in the environment?

- A. Send a request via API at `http://<server.domain.com>/engine/performancecheck`
- B. Access `https://<server.domain.com>/qmc/audit`
- C. Send a request via API at `https://<server.domain.com>/engine/healthcheck`
- **D. Inspect logs in %ProgramData%\Qlik\Sense\Log\Engine**

Answer: D

NEW QUESTION # 42

A system administrator must implement authentication and authorization for a Qlik Sense environment in which of the following conditions are present:

- The user attributes are stored in the company's OpenLDAP server
- Windows authentication is NOT allowed
- External access to the Qlik Sense environment is NOT required

Which methodology should the system administrator use to set up authentication?

- A. The LDAP server login page must be used and SAML authentication must be defined in the virtual proxy
- **B. A login page must be created that checks the credentials against the LDAP secret and uses web ticketing**
- C. A user directory connector must be set up to connect to the LDAP server
- D. The LDAP server login page must be used and a virtual proxy must be set up to accept header authentication

Answer: B

NEW QUESTION # 43
