

300-710 Exam Dumps | Reliable 300-710 Exam Vce

P.S. Free 2026 Cisco 300-710 dumps are available on Google Drive shared by ActualVCE: <https://drive.google.com/open?id=1IQ-wyx-hWQiytYrQNeYWcBScmdRdDhQB>

ActualVCE alerts you that the syllabus of the Securing Networks with Cisco Firepower (300-710) certification exam changes from time to time. Therefore, keep checking the fresh updates released by the Cisco. It will save you from the unnecessary mental hassle of wasting your valuable money and time. ActualVCE announces another remarkable feature to its users by giving them the Securing Networks with Cisco Firepower (300-710) dumps updates until 1 year after purchasing the Securing Networks with Cisco Firepower (300-710) certification exam pdf questions.

Passing the Cisco 300-710 Exam can help professionals demonstrate their expertise in network security and improve their job prospects. Securing Networks with Cisco Firepower certification is recognized by many organizations as a valuable credential for security professionals, and it can open up new opportunities for career advancement and higher salaries.

100% Pass Quiz Cisco - Updated 300-710 - Securing Networks with Cisco Firepower Exam Dumps

We believe that if you trust our 300-710 exam simulator and we will help you obtain 300-710 certification easily. After purchasing, you can receive our 300-710 training material and download within 10 minutes. Besides, we provide one year free updates of our 300-710 learning guide for you and money back guaranteed policy so that we are sure that it will give you free-shopping experience. Now choose our 300-710 practice braindump, you will not regret.

Cisco 300-710 Exam is a professional-level certification that validates a candidate's knowledge and skills in securing networks with Cisco Firepower. Securing Networks with Cisco Firepower certification is designed for security professionals, network administrators, and engineers who are responsible for the security of their organization's network infrastructure.

Cisco Securing Networks with Cisco Firepower Sample Questions (Q309-Q314):

NEW QUESTION # 309

Refer to the exhibit.

□ An organization has an access control rule with the intention of sending all social media traffic for inspection. After using the rule for some time, the administrator notices that the traffic is not being inspected, but is being automatically allowed. What must be done to address this issue?

- A. Add the social network URLs to the block list
- B. Change the intrusion policy to connectivity over security.
- C. Modify the rule action from trust to allow
- **D. Modify the selected application within the rule**

Answer: D

NEW QUESTION # 310

Which two conditions must be met to enable high availability between two Cisco FTD devices? (Choose two.)

- A. same flash memory size
- B. same host name
- **C. same number of interfaces**
- D. same DHCP/PPoE configuration
- **E. same NTP configuration**

Answer: C,E

Explanation:

<https://www.cisco.com/c/en/us/support/docs/security/firepower-management-center/212699-configure-ftd-high-availability-on-firep.html> Conditions In order to create an HA between 2 FTD devices, these conditions must be met:

Same model

Same version (this applies to FXOS and to FTD - (major (first number), minor (second number), and maintenance (third number) must be equal)) Same number of interfaces Same type of interfaces Both devices as part of same group/domain in FMC Have identical Network Time Protocol (NTP) configuration Be fully deployed on the FMC without uncommitted changes Be in the same firewall mode: routed or transparent.

Note that this must be checked on both FTD devices and FMC GUI since there have been cases where the FTDs had the same mode, but FMC does not reflect this.

Does not have DHCP/Point-to-Point Protocol over Ethernet (PPPoE) configured in any of the interface Different hostname (Fully Qualified Domain Name (FQDN)) for both chassis. In order to check the chassis hostname navigate to FTD CLI and run this command

NEW QUESTION # 311

□ Refer to the exhibit. An engineer is modifying an access control policy to add a rule to inspect all DNS traffic that passes through the firewall. After making the change and deploying the policy, they see that DNS traffic is not being inspected by the Snort engine. What is the problem?

- **A. The action of the rule is set to trust instead of allow.**
- B. The rule must define the source network for inspection as well as the port
- C. The rule must specify the security zone that originates the traffic
- D. The rule is configured with the wrong setting for the source port

Answer: A

NEW QUESTION # 312

When do you need the file-size command option during troubleshooting with packet capture?

- A. when capture packets are less than 16 MB
- **B. when capture packets exceed 32 MB**
- C. when capture packets exceed 10 GB
- D. when capture packets are restricted from the secondary memory

Answer: B

Explanation:

Reference:

https://www.cisco.com/c/en/us/td/docs/security/firepower/620/configuration/guide/fpmc-config_guide-v62/troubleshooting_the_system.html

NEW QUESTION # 313

A network administrator is trying to configure an access rule to allow access to a specific banking site over HTTPS. Which method must the administrator use to meet the requirement?

- **A. Enable SSL decryption and specify the URL.**
- B. Define the URL to be blocked and disable SSL inspection.
- C. Block the category of banking and define the application of WWW.
- D. Define the URL to be blocked and set the application to HTTP.

Answer: A

Explanation:

To allow access to a specific banking site over HTTPS, the network administrator must use SSL decryption (also known as SSL/TLS inspection) and specify the URL. This is because HTTPS traffic is encrypted, and the firewall needs to decrypt the traffic to inspect the URL and enforce the access rule.

Steps:

* Enable SSL Decryption: Configure SSL policies to decrypt the HTTPS traffic.

* Specify the URL: Define the URL of the banking site in the access control policy, ensuring that the decrypted traffic is inspected and allowed based on the specified URL.

This method ensures that only the desired banking site is accessed over HTTPS, while other HTTPS traffic can be filtered or blocked according to the organization's security policies.
