**InsuranceSuite-Analyst PDF - InsuranceSuite-Analyst認證題庫**

Guidewire的InsuranceSuite-Analyst認證考試是現在IT領域非常有人氣的考試。取得這個考試的認證資格對想晉升的人們來說是最好的，也是最可以看到效果的選擇。而且，借助這個考試你也可以提高自己的技能，掌握更多的對工作有用的技術。這樣你就可以更好地完成你的工作，向別人展示你的超強的能力。也只有这样你才可以获得更多的发展机会。

## 最新的 Guidewire Certified Associate InsuranceSuite-Analyst 免費考試真題 (Q67-Q72):

### 問題 #67

During the development phase of the project, what activities are completed in relationship to user stories? (Select two)

- A. User stories are checked into the production code branch by developers
- B. User stories are initially prioritized for scheduling in sprints
- C. User stories are all evaluated for inclusion in project scope
- **D. User stories are tested by Quality Analysts against acceptance criteria**
- **E. User story solutions are configured by developers**

答案： D,E

### 解題說明：

The development phase of a Guidewire project is where approved and prioritized user stories are implemented and validated.

During this phase, developers configure solutions for user stories (Option C). This includes product model configuration, rules, UI changes, and integrations as required by the story.

At the same time, Quality Analysts test user stories against documented acceptance criteria (Option B).

This ensures the implemented solution meets business expectations and behaves correctly across scenarios.

The other options occur in different phases. Scope evaluation and prioritization happen during Inception, and code is promoted to production during Deployment.

### 問題 #68

A well written user story follows the INVEST model. INVEST is an acronym that stands for:

- **A. Independent, Negotiable, Valuable, Estimable, Small, Testable**
- B. Investigate, Negotiable, Valuable, Estimable, Software, Testable
- C. Independent, Negotiable, Viable, Elaborate, Software, Technology
- D. Investigate, Negotiable, Viable, Elaborate, Small, Technology

答案： A

### 解題說明：

Comprehensive and Detailed Explanation:

The INVEST model, originally created by Bill Wake, is the industry-standard checklist used by Guidewire Business Analysts to assess the quality of a User Story.

\* Independent: The story should be self-contained, allowing it to be developed and tested separately from other stories to avoid dependencies that block progress.

\* Negotiable: The story is not a closed contract; it is an invitation to a conversation (Story Huddle) where details can be adjusted between the BA, Developer, and QA.

\* Valuable: It must deliver value to the business or the user (not just a technical task).

\* Estimable: The team must have enough information to size the effort. If it cannot be estimated, it usually needs further clarification or breakdown.

\* Small: It should be small enough to be completed within a single sprint (typically 2-3 days of work).

\* Testable: It must have clear acceptance criteria (often in Given-When-Then format) that allow the QA team to verify when the story is "Done." Why other options are incorrect:

\* B, C, D: These contain incorrect terms such as "Viable," "Elaborate," "Software," "Technology," or "Investigate," which are not part of the standard INVEST acronym.

### 問題 #69

An analyst is preparing for a requirements elaboration workshop where the business has historically expressed a strong desire to retain many legacy system functionalities.

Which strategies should the analyst employ to follow best practices? choose two

- A. Focus primarily on technical feasibility, leaving value alignment for later project phases.
- **B. Review the project's strategic business objectives to align all proposed changes with value-driven goals.**
- **C. Prepare by thoroughly understanding the InsuranceSuite standard functionality and being ready to demonstrate it.**
- D. Avoid consulting inception notes or previous workshop recordings, as they may contain outdated information.
- E. Allow stakeholders to dictate solutions based solely on their familiarity with past systems.

答案: B,C

解題說明:

Comprehensive and Detailed Explanation:

In a Guidewire implementation, particularly when facing stakeholders attached to legacy processes, the Business Analyst must act as a "Consultant" rather than just an "Order Taker." The two most effective strategies to manage this dynamic are:

\* Understand and Demonstrate Standard Functionality (Option D):

The Guidewire SurePath methodology emphasizes a "Standard-First" (or "Adopt before Adapt") approach. To effectively challenge a request to recreate a legacy feature, the analyst must deeply understand the Out-of-the-Box (OOTB) InsuranceSuite capabilities. By demonstrating how the standard product handles the business scenario (even if the process is different from the legacy way), the analyst can often convince stakeholders to adopt the modern, standard workflow, thereby reducing customization costs and future maintenance.

\* Align with Strategic Business Objectives (Option A):

Legacy system functionality often includes "bloat"-features that were useful 10 years ago but no longer drive value. The analyst must use the project's Strategic Business Objectives (defined in Inception) as a filter.

When a stakeholder asks for a legacy feature, the analyst should ask, "How does this feature contribute to our goal of [e.g., Reducing Quote Time by 20%]?" If the request cannot be tied to a value-driven goal, it is easier to de-prioritize or reject it.

Why other options are incorrect:

\* E. Allow stakeholders to dictate solutions: This leads to "paving the cow path"-rebuilding the old system on new technology, which destroys the ROI of the implementation.

\* B. Focus on technical feasibility: Value alignment must happen before technical feasibility analysis; building a feasible but useless feature is waste.

\* C. Avoid consulting inception notes: Inception notes contain the scope boundaries and agreed-upon MVP definitions, which are critical leverage when rejecting out-of-scope legacy requests.

問題 #70

Which of the following describes what user story acceptance criteria are?

- A. They describe the value delivered to the end user
- B. They describe the role, the expected action, and the reason why the action is needed
- C. They are a checklist of key activities that must be completed to accept a story
- **D. They tell when a user story is "done"**

答案: D

解題說明:

Comprehensive and Detailed Explanation (250-300 words):

User story acceptance criteria define the conditions that must be met for a story to be considered complete or "done." Therefore, Option B is correct.

Acceptance criteria provide clear, testable statements that confirm whether the implemented functionality satisfies the business requirements. They help align Business Analysts, Developers, and Quality Analysts on expected behavior and success conditions. Option A describes a user story format, not acceptance criteria. Option C refers to task checklists, which are implementation-focused rather than outcome-focused. Option D describes business value, which belongs in the story description, not acceptance criteria.

問題 #71

A well written user story follows the INVEST model. INVEST is an acronym that stands for:

- **A. Independent, Negotiable, Valuable, Estimable, Small, Testable**
- B. Investigate, Negotiable, Valuable, Estimable, Software, Testable
- C. Independent, Negotiable, Viable, Elaborate, Software, Technology

- D. Investigate, Negotiable, Viable, Elaborate, Small, Technology

答案： A

解題說明：

The INVEST model, originally created by Bill Wake, is the industry-standard checklist used by Guidewire Business Analysts to assess the quality of a User Story.

\* Independent: The story should be self-contained, allowing it to be developed and tested separately from other stories to avoid dependencies that block progress.

\* Negotiable: The story is not a closed contract; it is an invitation to a conversation (Story Huddle) where details can be adjusted between the BA, Developer, and QA.

\* Valuable: It must deliver value to the business or the user (not just a technical task).

\* Estimable: The team must have enough information to size the effort. If it cannot be estimated, it usually needs further clarification or breakdown.

\* Small: It should be small enough to be completed within a single sprint (typically 2-3 days of work).
