Useful Latest JN0-336 Exam Format – Find Shortcut to Pass JN0-336 Exam

All these Security, Specialist (JNCIS-SEC) (JN0-336) exam dumps formats contain real, updated, and error-free Security, Specialist (JNCIS-SEC) (JN0-336) exam questions that prepare you for the final JN0-336 exam. To give you an idea about the top features of Security, Specialist (JNCIS-SEC) (JN0-336) exam dumps, a free demo download facility is being offered to Juniper Certification Exam candidates.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q36-Q41):

NEW QUESTION # 36

How does Juniper ATP Cloud protect a network from zero-day threats?

- A. It uses known virus signatures.
- **B. It uses dynamic analysis.**
- C. It uses a cache lookup.
- D. It uses antivirus software.

Answer: B

Explanation:

Juniper ATP Cloud is a cloud-based service that provides advanced threat prevention and detection for your network. It integrates with SRX Series firewalls and MX Series routers to analyze files and network traffic for signs of malicious activity. Juniper ATP Cloud protects a network from zero-day threats by using dynamic analysis, which is a method of executing files in a sandbox environment and observing their behavior and network interactions. Dynamic analysis can uncover unknown malware that may evade static analysis or signature-based detection methods.

NEW QUESTION # 37

You are configuring logging for a security policy.

In this scenario, in which two situations would log entries be generated? (Choose two.)

- A. at session close
- B. every 60 seconds
- C. at session initialization
- D. every 10 minutes

Answer: A,C

Explanation:

Log entries would be generated in two situations: at session initialization and at session close. At session initialization, the log entry would include details about the connection, such as the source and destination IP addresses, the service being used, and the action taken by the security policy. At session close, the log entry would include details about the connection, such as the duration of the session, the bytes sent/received, and the action taken by the security policy. For more information, you can refer to the Juniper Security documentation at

https://www.juniper.net/documentation/en_US/junos/topics/reference/configuration-statement/security-log-co

NEW QUESTION # 38

On which three Hypervisors is vSRX supported? (Choose three.)

- A. Citrix Hypervisor
- B. Hyper-V
- C. VMware ESXi
- D. Oracle VM
- E. KVM

Answer: B,C,E

Explanation:

vSRX is a virtual firewall that runs as a software instance on a hypervisor. A hypervisor is a software layer that allows multiple virtual machines to run on a single physical host. vSRX supports three hypervisors: VMware ESXi, Hyper-V, and KVM. VMware ESXi is a hypervisor that runs on x86 servers and supports various operating systems and applications. Hyper-V is a hypervisor that runs on Windows Server and supports Windows and Linux virtual machines. KVM (Kernel-based Virtual Machine) is a hypervisor that runs on Linux and supports Linux, Windows, and other operating systems.

NEW QUESTION # 39

You are asked to determine how much traffic a popular gaming application is generating on your network.

Which action will you perform to accomplish this task?

- A. Enable AppQoS on the proper security zones
- B. Enable APBR on the proper security zones
- C. Enable screen options on the proper security zones
- D. Enable AppTrack on the proper security zones.

Answer: D

Explanation:

AppTrack is a feature of Juniper Networks firewall solutions that allows administrators to track applications, users, and the amount of traffic generated by those applications on the network. AppTrack can be enabled on specific security zones of the network to monitor traffic on those zones. This feature can be used to determine how much traffic a popular gaming application is generating on the network.

For more information, please refer to the Juniper Networks JNCIS-SEC Study Guide.

NEW QUESTION # 40

Click the Exhibit button.

```
ser@srx# show
policy ATP-Protect {
  match {
    source-address Internal-Hosts;
    destination-address any;
    application [ junos-http junos-https ];
  }
  then {
    permit {
      application-services {
        ssl-proxy {
          profile-name SSL-Proxy-Profile-1;
        }
        advanced-anti-malware-policy Malware-Policy;
      }
    }
  }
}
```

```
edit security policies from-zone Trust to-zone Untrust]
```

You are asked to create a security policy that will automatically add infected hosts to the infected hosts feed and block further communication through the SRX Series device.

What needs to be added to this configuration to complete this task?

- A. Add a security intelligence policy to the permit portion of the security policy.
- B. Add logging to the permit portion of the security policy.
- C. Add a match rule to the security policy with an appropriate threat level.
- D. Add an action to the permit portion of the security policy.

Answer: A

Explanation:

To create a security policy that will automatically add infected hosts to the infected hosts feed and block further communication through the SRX Series device, you need to add a security intelligence policy to the permit portion of the security policy. A security intelligence policy is a policy that allows you to block or monitor traffic from malicious sources based on threat intelligence feeds from Juniper ATP Cloud or other providers. One of the feeds that you can use is the Infected-Hosts feed, which contains IP addresses of hosts that are infected with malware and communicate with command-and-control servers.

You can create a profile and a rule for the Infected-Hosts feed and specify the threat level and the action to take for the infected hosts. Then, you can link the security intelligence policy with the firewall policy and apply it to the traffic that you want to protect.
