Successful people are those who are willing to make efforts. If you have never experienced the wind and rain, you will never see the rainbow. Giving is proportional to the reward. Now, our 3V0-24.25 study materials just need you spend less time, then your life will take place great changes. Our company has mastered the core technology of the 3V0-24.25 Study Materials. What's more, your main purpose is to get the certificate quickly and easily. Our goal is to aid your preparation of the 3V0-24.25 exam. Our study materials are an indispensable helper for you anyway. Please pay close attention to our 3V0-24.25 study materials.

As the quick development of the world economy and intense competition in the international, the world labor market presents many new trends: company's demand for the excellent people is growing. As is known to us, the 3V0-24.25 certification is one mainly mark of the excellent. If you don't have enough ability, it is very possible for you to be washed out. On the contrary, the combination of experience and the 3V0-24.25 Certification could help you resume stand out in a competitive job market.

## VMware 3V0-24.25 Questions PDF To Unlock Your Career [2026]

Our staff is suffer-able to your any questions related to our 3V0-24.25 test guide. If you get any suspicions, we offer help 24/7 with enthusiasm and patience. Apart from our stupendous 3V0-24.25 latest dumps, our after-sales services are also unquestionable. Your decision of the practice materials may affects the results you concerning most right now. Good exam results are not accidents, but the results of careful preparation and high quality and accuracy materials like our 3V0-24.25 practice materials.

## VMware Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Sample Questions (Q14-Q19):

### NEW QUESTION # 14

Which of the following best describes the primary function of a vSphere Namespace within a vSphere with Tanzu environment?

- A. It is a construct that maps 1:1 to a vCenter Server cluster for high availability.
- **B. It is a resource boundary backed by a Resource Pool that allows vSphere administrators to set limits on CPU, memory, and storage for a set of Kubernetes workloads.**
- C. It is a networking construct that provides isolation at Layer 2 for TKG clusters.
- D. It is a logical boundary that encapsulates a set of virtual machines for resource management.

**Answer: B**

#### NEW QUESTION # 15

An architect is working on the data protection design for a VMware Cloud Foundation (VCF) solution. The solution consists of a single Workload Domain that has vSphere Supervisor activated. During a customer workshop, the customer requested that vSphere Pods must be used for a number of third-party applications that have to be protected via backup. Which backup method or tool should be proposed by the architect to satisfy this requirement?

- A. Standalone Velero with Restic.
- **B. Velero Plugin for vSphere.**
- C. vSAN Snapshots.
- D. vCenter file-based backup.

**Answer: B**

Explanation:

VCF 9.0 distinguishes between backing up the Supervisor control plane and backing up workloads that run on the Supervisor, including vSphere Pods. In the "Considerations for Backing Up and Restoring Workload Management" table, the scenario "Backup and restore vSphere Pods" explicitly lists the required tool as "Velero Plugin for vSphere", with the guidance to "Install and configure the plug-in on the Supervisor." The same document is explicit that standalone Velero with Restic is not valid for vSphere Pods, stating: "You cannot use Velero standalone with Restic to backup and restore vSphere Pods. You must use the Velero Plugin for vSphere installed on the Supervisor." vCenter file-based backup is documented for restoring the Supervisor control plane state, not for backing up and restoring vSphere Pod workloads themselves. Therefore, to meet the requirement to protect third-party applications running as vSphere Pods, the architect should propose the Velero Plugin for vSphere.

#### NEW QUESTION # 16

How should an administrator enable autoscaling for a vSphere Kubernetes Service (VKS) cluster?

- A. Create a NodePool with autoscaling enabled.
- B. Update the NodePool YAML to enable the autoscaling feature.
- **C. Install the Cluster Autoscaler (standard package) for the cluster environment.**
- D. Create a VKS cluster with autoscaler annotations.

**Answer: C**

Explanation:

In VCF 9.0, cluster autoscaling is delivered as an optional capability that requires installing the Cluster Autoscaler as a standard package. The VCF 9.0 materials explicitly call out Cluster Autoscaler as an optionally installed package for vSphere Kubernetes Service, alongside other optional packages (for example, Harbor, Velero, Istio, etc.). The release information further emphasizes that autoscaling features (including newer behaviors such as scaling from/to zero for supported VKS versions) require that "the autoscaler standard package" be installed.

Operationally, installing the autoscaler package provides the controller that watches pending pods and node utilization signals and then drives the required changes in desired worker capacity. After that controller is present, you typically express scaling intent through the cluster's declarative configuration (for example, worker pool/node pool constraints and limits) so the autoscaler can act within the boundaries you define.

Without the autoscaler package, changing replica counts or expecting automatic node growth/shrink will not produce autoscaling behavior because the control loop that performs those actions is missing.

#### NEW QUESTION # 17

A VKS administrator is tasked to leverage day-2 controls to monitor, scale, and optimize Kubernetes clusters across multiple

operating systems and workload characteristics.

What two steps should the administrator take? (Choose two.)

- **A. Deploy Prometheus and Grafana to collect and display scrapeable metrics on nodes, pods, and applications.**
- B. Disable Cluster Autoscaler to ensure resources in the pool are not depleted.
- C. Set all VM Class limits to Compute Heavy to ensure worker nodes get all the resources needed.
- D. Ensure all node pools use the same Machine Deployment configuration for different workload characteristics.
- **E. Configure namespace quotas to set resource limits for CPU, memory, and storage.**

**Answer: A,E**

Explanation:

VCF 9.0 describes a vSphere Namespace as the control point where administrators define resource boundaries for workloads, explicitly stating that vSphere administrators can create namespaces and "configure them with specified amount of memory, CPU, and storage," and that you can "set limits for CPU, memory, storage" for a namespace. This directly supports step A as a day-2 control to keep multi-tenant clusters governed and prevent resource contention across different teams and workload types. For monitoring and optimization, VCF 9.0 explains that day-2 operations include visibility into utilization and operational metrics for VKS clusters, noting that application teams can use day-2 actions and gain insights into CPU and memory utilization and advanced metrics (including contention and availability) for VKS clusters. In addition, VCF 9.0 monitoring guidance for VKS clusters states that Telegraf and Prometheus must be installed and configured on each VKS cluster before metrics and object details are sent for monitoring, and that VCF Operations supports metrics collection for Kubernetes objects (namespaces, nodes, pods, containers) via Prometheus. Since the Prometheus stack commonly includes Grafana dashboards for visualization, deploying Prometheus + Grafana matches the required monitoring/optimization outcome in C.

#### **NEW QUESTION # 18**

A Developer is using Helm to upgrade an application my-app. The upgrade fails, leaving the release in a failed state. How can the developer recover the application to the previous working version using Helm?

- A. `kubectl apply -f previous-manifest.yaml`
- B. `kubectl rollout undo deployment my-app`
- C. `helm delete my-app` and re-install.
- **D. `helm rollback my-app`**

**Answer: D**
